Two shows changed the face of Australian television forever, and rocked

the nation to its foundations. And now, the creator of Number 96 and the Executive Producer of The Mavis Bramston Show takes you behind the scenes of these two controversial, outrageously groundbreaking series for a jaunt through the industry's Golden Years. These two shows flaunted the unmentionable, destroyed taboos, ridiculed sacred cows and dared to deal with subjects hitherto considered too shocking for polite society. They were condemned from the pulpit, slayed by the critics, yet adored by an immense majority of viewers. Actor, script writer, producer and author David Sale's career progressed through the theatres and movie studios of London and Hollywood and the turbulent world of Australia's TV industry, and he takes us with him every step of the way. It's a life that began in war-ravaged Manchester, followed the migrant route to Australia, and - against all odds - hit the heights of show business. It can be summed up in four words. From Blitz to Glitz! "I held her firmly at arm's length and told her not to forget to leave her breakfast order outside the door. All around us, whispers of debauchery filtered from elsewhere in the hotel. She turned her face up at me, with an innocence that belied her words, blinked at me, the tears still visible on

her cheeks. 'I'm serious, you know. I want to be a star. And I'll do anything, f\*ck anyone, to get there. I know you will, I said. And eventually, she did.

*Being a Series of Introductory Lessons, for Domestic and Business Purposes*

Focus On: 100 Most Popular Sedans  
Addresses the methodology and theoretical foundation of battery manufacturing, service and management systems (BM2S2), and discusses the issues and challenges in these areas This book brings together experts in the field to highlight the cutting edge research advances in BM2S2 and to promote an innovative integrated research framework responding to the challenges. There are three major parts included in this book: manufacturing, service, and management. The first part focuses on battery manufacturing systems, including modeling, analysis, design and control, as well as economic and risk analyses. The second part focuses on information technology's impact on service systems, such as data-driven reliability modeling, failure prognosis, and service decision making methodologies for battery services. The third part addresses battery management systems (BMS) for control and optimization of battery cells, operations, and hybrid storage systems to ensure overall performance and safety, as well as EV management. The contributors consist of experts from universities, industry research centers, and government agency. In addition, this book: Provides comprehensive overviews of lithium-ion battery and battery electrical vehicle manufacturing, as well as economic returns and government support Introduces integrated models for quality propagation and productivity improvement, as well as indicators for

bottleneck identification and mitigation in battery manufacturing Covers models and diagnosis algorithms for battery SOC and SOH estimation, data-driven prognosis algorithms for predicting the remaining useful life (RUL) of battery SOC and SOH Presents mathematical models and novel structure of battery equalizers in battery management systems (BMS) Reviews the state of the art of battery, supercapacitor, and battery-supercapacitor hybrid energy storage systems (HESSs) for advanced electric vehicle applications Advances in Battery Manufacturing, Services, and Management Systems is written for researchers and engineers working on battery manufacturing, service, operations, logistics, and management. It can also serve as a reference for senior undergraduate and graduate students interested in BM2S2.

An exclusive look at one of the world's most successful and controversial companies, and the mysterious family behind it. BMW is arguably the most admired carmaker in the world. It's financial performance is the envy of its competitors, and BMW products inspire near-fanatical loyalty. While many carmakers struggle with falling sales, profits and market share, demand for BMWs continues to grow, frequently outpacing production. Now, David Kiley-Detroit Bureau Chief at USA Today and author of Getting the Bugs Out, which covered Volkswagen's demise and rebirth, goes inside the fabled German automaker to see how it does what it does so well. With unprecedented access to BMW executives, Kiley goes behind the walls of BMW's famed "Four Cylinders" headquarters in Munich at a time when the company is in its most aggressive, and some say riskiest, expansion in its history and when some of the company's new products, like the 7 Series sedan and Z4 roadster, are for the first time drawing as many barbs from critics as bouquets. Kiley covers intimate details of the boardroom drama surrounding the company's nearly disastrous acquisition and subsequent sale of the British Rover Group and its

expansion into selling MINI and Rolls Royce cars. Besides being a world-class carmaker, BMW is also considered one of the smartest consumer marketing companies and Kiley explores the extraordinary value and management of the BMW brand mystique. He also takes a revealing look at the mysterious and ultra-private Quandt family of Bad Homburg Germany, which owns a controlling stake in BMW: Johanna and Susanne Quandt, two of the wealthiest women in Europe and Stefan Quandt, one of the wealthiest bachelors on the continent. David Kiley (Ann Arbor, MI) is the Detroit Bureau Chief at USA Today who has covered the auto industry for 17 years. He has been featured on Nightline, CNBC, CNN, MSNBC, NPR and the Today show. He is also the author of *Getting the Bugs Out: The Rise, Fall, and Comeback of Volkswagen in America* (0-471-26304-4), also available from Wiley.

Resistance used to mean irrational and reactionary behaviour, assuming that rationality resides on the side of progress and its parties. The end of the Cold War allows us to drop ideological and prejudicial analysis. Indeed, we recognise that resistance is a historical constant, and its relation to rationality or irrationality is not predetermined. This volume asks: to what extent are social scientific conceptions of 'resistances' sui generis, or borrowed from natural sciences by metaphor and analogy? To what extent do the social sciences continue to be a 'social tribology' lubricating a process of strategic changes? Fifteen authors explore these questions from the point of view of different disciplines including physics, biology, social psychology, history of

science, history of medicine, legal theory, political science, history, police studies, psychotherapy research and art theory. The book offers a unique panorama of concepts of 'resistance' and examines the potential of a general 'resistology' across diverse practices of rationality.

The AVEC symposium is a leading international conference in the fields of vehicle dynamics and advanced vehicle control, bringing together scientists and engineers from academia and automotive industry. The first symposium was held in 1992 in Yokohama, Japan. Since then, biennial AVEC symposia have been established internationally and have considerably contributed to the progress of technology in automotive research and development. In 2016 the 13th International Symposium on Advanced Vehicle Control (AVEC'16) was held in Munich, Germany, from 13th to 16th of September 2016. The symposium was hosted by the Munich University of Applied Sciences. AVEC'16 puts a special focus on automatic driving, autonomous driving functions and driver assist systems, integrated control of interacting control systems, controlled suspension systems, active wheel torque distribution, and vehicle state and parameter estimation. 132 papers were presented at the symposium and are published in these proceedings as full paper contributions. The papers review the latest research developments and practical applications in highly relevant areas of vehicle control, and may serve as a reference for researchers and engineers.

BMW's M5 was a simple concept: a production 5 Series saloon re-developed for high performance by the Motorsport division. The M5 was the car that really initiated the legend of the M-cars from BMW; the letter M had been applied to a high-performance BMW as early as 1978, but that year's M1 was an exotic supercar. It had the right image, but the M1 was never going to bring in major profits. The M5 was much simpler in concept. It was and remains a production 5 Series saloon, redeveloped for ultra-high performance.

Manufacturing costs were minimized, allowing BMW to price the car more attractively and still bring in healthy profits. This new book charts the development of the M5 across five generations. For all fans of the BMW M5, this book provides essential background, and is packed with the facts and details that make the M5 legend come alive. The M5 is still in production and remains the benchmark high-performance saloon wherever it is sold. This is essential background reading for all BMW M5 fans and motoring enthusiasts and is superbly illustrated with 211 colour photographs.

Die Produktentwicklung ist der dynamischste und am schwersten zu beherrschende Prozess in Industrieunternehmen.

Prozessreifegradmodelle wie CMMI erfordern dazu quantitative Methoden als Werkzeug des

Entwicklungsmanagements. Mit der modellgetriebenen Entwicklung steht eine Datenbasis für eine durchgehende quantitative Analyse zur Verfügung.

Modellanalysen erlauben eine prozessbegleitende Qualitätsmessung und die Bestimmung der

Produktkomplexität und des Entwicklungsfortschritts. Das Buch stellt bestehende Methoden des quantitativen Entwicklungsmanagements zur Entscheidungsunterstützung auf operativer und strategischer Ebene vor.

Die Autoren zeigen, wie die modellgetriebene Entwicklung zur Analyse der erreichten Ergebnisse

genutzt werden kann, etwa zur Bewertung von Methoden, Werkzeugen sowie zur Prozess- oder Projektanpassung.
