*Essentials of Human Anatomy & Physiology Laboratory Manual* Pearson

This full-color manual is designed for students with minimal backgrounds in science who are pursuing careers in allied health fields. Designed to support the thirteenth edition of Hole's *Essentials of Human A&P* by Shier, Butler, and Lewis, this manual contains 49 laboratory exercises and reports, which are integrated closely to the textbook. Exercises are planned to illustrate and review the anatomical and physiological

facts and principles presented in the text and to help students investigate some of these ideas in greater detail.

*Main version* John Wiley & Sons

This full-color atlas is designed for all students taking separate or integrated courses in human anatomy and physiology. This atlas can accompany and augment any human anatomy, human physiology or combined human anatomy and physiology textbook. It is designed to be of particular value to students in a laboratory situation and could either accompany a laboratory manual or, in certain courses, it could serve as the laboratory manual. Great care has gone into the preparation of this photographic atlas to provide students with a complete set of photographs for each of the human body systems. Cat, fetal pig, and rat dissection are also included for those students who have the opportunity to do similar dissections as part of their laboratory requirement. In addition, photographs of a sheep heart dissection are also included. A visual balance is achieved between the various levels available to observe the structure of the body. Completely labeled, informative figures are depicted clearly and accurately. The terms used in this atlas are those that are approved and recommended by the Basle Nomina Anatomica (BNA). Some of the changes for this new edition include a new art program, new vertebrate dissection images (new specimens were dissected to obtain better quality photographs of the muscular and organ systems), and a new full page heart valve/cardiac cycle figure.
