They follow the oldest-known living lineage of *Sarcopterygii*, which means they are more closely related to lungfish and tetrapods than to ray-finned fish. They are found along the coastline of Indonesia and in the Indian Ocean. The West Indian Ocean coelacanCoelacanth - WikipediaThe coelacanth is a rare marine fish that is a living representative of an ancient lineage of formerly common fishes. This and the closely related Indonesian coelacanth (*Latimeria menadoensis*) have several unique physical characteristics that few or no other living species have.Coelacanth - OceanaCoelacanths appeared about 350 million years ago and were abundant over much of the world; the genus *Coelacanthus* has been found as fossils in rocks from the end of the Permian, 251 million years ago, to the end of the Jurassic, 145.5 million years ago. Coelacanthus, like other coelacanths, showed a reduction in bone ossification and a general trend toward a marine mode of life away from the ...coelacanth | Description, Habitat, Discovery, & Facts ...The

other known species, the coelacanth of Comores, *Latimeria chalumnae*, is considered critically endangered. Discovery On September 18, 1997, a strange-looking fish was observed at a market in Manado Tua, on the island of Celebes, Indonesia, which was thought to be a coelacanth of Comores; however, it differed from this by its brown color at the back.Coelacanths: Characteristics, types, behavior and more....Diet of the Coelacanth. These fish are piscivores, this means that their primary prey are other fish species. As deep-sea fish, they feed on benthic species, which are species that live on or near the sea floor. They will eat a wide variety of fish, squid, and other cephalopods.Coelacanth - Description, Habitat, Image, Diet, and ...So while the coelacanth may appear to be like many other fish in the sea, it is so much more than that. It is an extremely rare hint at our origins. It is a glimpse at the prehistoric world, a time when dinosaurs roamed the earth and ocean. But it also represents something else.The Coelacanth And The Mysteries Of The DeepPrior to the discovery of living coelacanths in 1938, our only knowledge of the fish came from fossils. Coelacanths are more closely related to tetrapods (four-limbed vertebrates) than to ray-finned fish (which make up the majority of other living fish species). It has been suggested that coelacanths form a direct evolutionary link between the groups.Coelacanth Facts, Pictures & Information: An Amazing ...Like assorted other fish and reptiles, coelacanths are "ovoviviparous." In other words, the female's eggs are fertilized internally and stay in the birth duct until they're ready to hatch. Technically, this type of "live birth" is different from that of placental mammals, in which the developing embryo is attached to the mother via an umbilical cord.Coelacanth: the "Living Fossil" - ThoughtCoCoelacanths are elusive, deep-sea creatures, living in depths up to 2,300 feet below the surface. They can be huge, reaching 6.5 feet or more and weighing 198 pounds. Scientists estimate they can ...Coelacanths | National GeographicThe coelacanth is the last fish in this first book, and then I'm going on to the other books—it is a joint effort with a couple friends in Proving (through evidence) that everything our church taught us was wrong. It started out as a way to prove WHETHER it was wrong or not, but the Whether didn't last long.Coelacanths are not living fossils - EcologicaThe discovery of the coelacanth is a bit miraculous when you consider the two main players in this drama: Marjorie Courtenay-Latimer, a young curator at a natural history museum in East London, South Africa, and J.L.B. Smith, a chemistry professor and amateur ichthyologist who worked at Rhodes University in nearby Grahamstown.How the Coelacanth Works | HowStuffWorksCoelacanth. Weight: up to 200 pounds (90 kg) Life Span: unknown Special Design Feature: The coelacanth is the only living animal that can lift and move the front part of its head when feeding. Did You Know? The coelacanth was thought to have died out at the time of the dinosaurs.Coelacanth | Kids AnswersThe coelacanth is a deep-sea fish that lives in the Indian Ocean. It is known as a living fossil fish. The coelacanth appeared on Earth about 350 million years

ago. It is millions of years older than the dinosaurs. The scientific name of the coelacanth is *Latimeria chalumnae*. It was thought that coelacanths had become extinct, or died out, ...coelacanth - Kids | Britannica Kids | Homework Help

25 coelacanth individuals. 7 Other African coelacanth catches have been reported off the coasts of Mozambique, Madagascar, Tanzania and Kenya. 8 Investigations into the relatedness of the (PDF) Molecular biology studies on the coelacanth: A review

The primitive-looking coelacanth (pronounced SEEL-uh-kanth) was thought to have gone extinct with the dinosaurs 65 million years ago. But its discovery in 1938 by a South African museum curator on a local fishing trawler fascinated the world and ignited a debate about how this bizarre lobe-finned fish fits into the evolution of land animals.

Coelacanth - Animals Town

The coelacanth has long been hailed as an ancestor to amphibians and other tetrapods as their lineage goes back a supposed 300 million years. 1 However, the exact origin of coelacanths has never been established by evolutionary scientists, the fish just seem to appear in the rocks "suddenly" like most all fossil organisms. 4 And modern coelacanths were also found to give birth to live young ...Coelacanths: Evolutionists Still Fishing in Shallow Water ...Coelacanths are a part of the clade Sarcopterygii, or the lobe-finned fishes. Externally, several characteristics distinguish the coelacanth from other lobe-finned fish. They possess a three-lobed caudal fin, also called a trilobate fin or a diphyccercal tail. A secondary tail extending past the primary tail separates the upper and lower halves of the coelacanth.

Coelacanth - Infogalactic: the planetary knowledge core

The two species are *Latimeria menadoensis* and *Latimeria chalumnae*. The former one is called as Indonesian coelacanth. The latter one is often called West Indian Ocean coelacanths. You can spot them near the Comoro Islands. Facts about Coelacanth 1: the close relationship. Coelacanths have a close relationship with mammals, reptiles and lungfish.

10 Facts about Coelacanth | Fact File

A coelacanth is a type of fish in the Sarcopterygii, the lobe-finned fishes. They are a sister group to those fish which evolved into tetrapods. Their fossil record goes back 400 million years, before any land vertebrates had evolved. Coelacanths were thought to have been extinct for 80 million years, but in fact two species survived, living in the Indian Ocean. The first to be discovered was caught alive off the east African coast in 1938. Coelacanths are a part of the clade Sarcopterygii, or the lobe-finned fishes. Externally, several characteristics distinguish the coelacanth from other lobe-finned fish. They possess a three-lobed caudal fin, also called a trilobate fin or a diphyccercal tail. A secondary tail extending past the primary tail separates the upper and lower halves of the coelacanth.
