The study of migration is and always has been an interdisciplinary field of study, vast and vibrant in nature. This short introduction to the field, written by leading historians of migration for student readers, offers an acute analysis of key issues across several disciplines. It takes in its scope an overview of migrations through history, how classic theories have interpreted such movements, and contemporary topics and debates including transnational and transcultural lives, access to citizenship, and migrant entrepreneurship. Historical perspectives reveal how the scholarly field emerged and developed over time and across cultures and how historians of migration have recently begun to re-write the story of human life on earth. Throughout, the authors suggest how the movements of millions of mobile men and women persistently challenge changing scholarly paradigms for understanding their lives. Key concepts and theories, such as systems, networks, and gender, are explained and historicized to produce a complex picture of the interaction of migrants, scholars, and disciplinary cultures in a globalized world.

Should governments be involved in economic affairs? Challenging prevailing wisdom about the benefits of self-regulating markets, Nina Bandelj and Elizabeth Sowers offer a uniquely sociological perspective to emphasize that states can never be divorced from economy. From defining property rights and regulating commodification of labor to setting corporate governance standards and international exchange rules, the state continuously manages the functioning of markets and influences economic outcomes for individuals, firms and nations. The authors bring together classical interventions and cutting-edge contemporary research in economic sociology to discuss six broad areas of economy/state connection: property, money, labor, firms, national economic growth, and global economic exchange. A wealth of empirical examples and illustrations reveals that even if the nature of state influence on economy varies across contexts, it is always dependent on social forces. This accessible and engaging book will be essential reading for upper-level students of economic sociology, and those interested in the major economic dilemmas of our times. .

Within the so-called seduction community, the ability to meet and attract women is understood as a skill which heterosexual men can cultivate through practical training and personal development. Though it has been an object of media speculation – and frequent sensationalism – for over a decade, this cultural formation remains poorly understood. In the first book-length study of the industry, Rachel O'Neill takes us into the world of seduction seminars, training events, instructional guidebooks and video tutorials. Pushing past established understandings of 'pickup artists' as pathetic, pathological or perverse, she examines what makes seduction so compelling for those drawn to participate in this sphere. Seduction vividly portrays how the twin rationalities of neoliberalism and postfeminism are reorganising contemporary intimate life, as labour-intensive and profit-orientated modes of sociality consume other forms of being and relating. It is essential reading for students and scholars of gender, sexuality, sociology and cultural studies, as well as anyone who wants to understand the seduction industry's overarching logics and internal workings.

Comparative Criminal Justice John Wiley & Sons

In this short and provocative book, cultural studies scholar Angela McRobbie develops a much-needed feminist account of neoliberalism. Highlighting the ways in which popular culture and the media actively produce and sustain the cultural imaginary for social polarization, she shows how there is substantial pressure on women not just to be employed, but to prioritize working life. She fiercely challenges the media gatekeepers who shape contemporary womanhood by means of exposure and public shaming, and pays particular attention to the endemic nature of anti-welfarism as it is addressed to women, thereby reducing the scope for feminist solidarity. In this theoretically rich and deep analysis of current cultural processes, McRobbie introduces a series of concepts including 'visual media governmentality' and the urging of women into work as 'contraceptive employment'. Foregrounding a triage of ideas as the 'perfect-imperfect-resilience' McRobbie conveys some of the key means by which consumer capitalism attempts to manage the threats posed by the new feminisms. She proposes that 'resilience' emerges as a compromise, as hard-edged neoliberalism proffers the option of a return to liberal feminism. A lively and devastating critique, *Feminism and Neoliberalism* offers a much-needed wake-up call. It is essential reading for students and scholars of cultural studies, media, sociology, and women's and gender studies.

This major new book offers a much-needed introduction to the work of Siegfried Kracauer, one of the main intellectual figures in the orbit of the Frankfurt School of Critical Theory. It is part of a timely revival and reappraisal of his unique contribution to our critical understanding of modernity, the interrogation of mass culture, and the recognition of both the dynamism and diminution of human experience in the hustle and bustle of the contemporary metropolis. In stressing the extraordinary

variety of Kracauer's writings (from scholarly philosophical treatises to journalistic fragments, from comic novels to classified reports) and the dazzling diversity of his themes (from science and urban architectural visions to slapstick and dancing girls), this insightful book reveals his fundamental and formative influence upon Critical Theory and argues for his vital relevance for cultural analysis today. Kracauer's work is distinguished by an acute sensitivity to the 'surface manifestations' of popular culture and a witty, eminently readable literary style. In exploring and making accessible the work of this remarkable thinker, this book will be indispensable for scholars and students working in many disciplines and interdisciplinary fields: sociology and social theory; film, media and cultural studies; urban studies, cultural geography and architectural theory; philosophy and Critical Theory.

From Ancient Greece to Contemporary America John Wiley & Sons

This new textbook seeks to explain how US defense and national security policy is formulated and conducted. The focus is on the role of the President, Congress, political partisans, defense industries, lobbies, science, the media, and interest groups, including the military itself, in shaping policies. It examines the following key themes: US grand strategy; who joins America's military; how and why weapons are bought; the management of defense; public attitudes toward the military and casualties; the roles of the President and the Congress in controlling the military; the effects of 9/11 on security policy, homeland security, government reorganizations, and intra- and inter-service relations. The book shows how political and organizational interests determine US defense policy, and warns against the introduction of centralising reforms. In emphasizing the process of defense policy-making, rather than just the outcomes of that process, this book signals a departure from the style of many existing textbooks.
