It takes more than 10 billion years to create just the right conditions on one planet for life to begin. It takes another three billion years of evolving life forms until it finally happens, a primate super species emerges: mankind. In conjunction with History Channel's hit television series by the same name, Mankind is a sweeping history of humans from the birth of the Earth and hunting antelope in Africa's Rift Valley to the present day with the completion of the Genome project and the birth of the seven billionth human. Like a Hollywood action movie, Mankind is a fast-moving, adventurous history of key events from each major historical epoch that directly affect us today such as the invention of iron, the beginning of Buddhism, the

crucifixion of Jesus, the fall of Rome, the invention of the printing press, the Industrial Revolution, and the invention of the computer. With more than 300 color photographs and maps, Mankind is not only a visual overview of the broad story of civilization, but it also includes illustrated pop-out sidebars explaining distinctions between science and history, such as why there is 700 times more iron than bronze buried in the earth, why pepper is the only food we can taste with our skin, and how a wobble in the earth's axis helped bring down the Egyptian Empire. This is the most exciting and entertaining history of mankind ever produced.

The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.

The second book in a romantic and drama-packed trilogy perfect for fans of Rachel Vincent, Julie Kagawa, and Alyson Noel. Lusciously romantic and full of action-packed drama, readers will be swept away by this thrilling novel. Dawn Montgomery knows that monsters really do come out at night—after all, they are her job. It's just after the thirty-year war between vampires and humans, and as an ambassador between the two sides (a role she inherited when her parents were killed), Dawn quickly learns that balancing schoolwork, teen life, and the requests of Lord Valentine, the most frightening vampire in the region, isn't easy. There's nowhere left to hide. I thought vampires were our enemies—they controlled our lives, isolated our cities, and demanded our blood—until I met Victor. With Victor taking over as the new Lord Valentine, things were supposed to get better. Instead, they're worse than ever. Day Walkers, a new breed of vampires who can walk in the sun, are terrorizing the city. Blood supplies are low, and if Victor's vampires don't get enough, they will become infected with the Thirst—a disease that will turn them into mindless killers. To stop it, I must journey across

the desolate wasteland to the very place where the sickness began. I can only hope that the answers that await me are enough to save us all...before it's too late.
