Public disenchantment with and distrust of American government is at an all-time high and who can blame them? In the face of widespread challenges—everything from record levels of personal and national debt and the sky high cost of education, to gun violence, racial discrimination, an immigration crisis, overpriced pharmaceuticals, and much more—the government seems paralyzed and unable to act, the most recent example being Covid-19. It's the deadliest pandemic in over a century. In addition to an unimaginable sick and death toll, it has left more than thirty million Americans unemployed. Despite this, Washington let the first round of supplemental unemployment benefits run out and for more than a month were unable to agree on a bill to help those suffering. This book explains why we are in this situation, why the government is unable to respond to key challenges, and what we can do to right the ship. It requires that readers "upstream," stop blaming the individuals in office and instead look at the root cause of the problem. The real culprit is the system; it was designed to protect liberty and structured accordingly. As a result, however, it has left us with a government that is not responsive, largely unaccountable, and often ineffective. This is not an accident; it is by design. Changing the way our government operates requires rethinking its primary goal(s) and then restructuring to meet them. To this end, this book offers specific reform proposals

to restructure the government and in the process make it more accountable, effective, and responsive.

A passionate personal journey through two cultures in conflict Shortly after militant Islamic terrorists destroyed the World Trade Center, Tamim Ansary of San Francisco sent an e-mail to twenty friends, telling how the threatened U.S. reprisals against Afghanistan looked to him as an Afghan American. The message spread, and in a few days it had reached, and affected, millions of people-Afghans and Americans, soldiers and pacifists, conservative Christians and talk-show hosts; for the message, written in twenty minutes, was one Ansary had been writing all his life. West

of Kabul, East of New York is an urgent communiqué by an American with "an Afghan soul still inside me," who has lived in the very different worlds of Islam and the secular West. The son of an Afghan man and the first American woman to live as an Afghan, Ansary grew up in the intimate world of Afghan family life, one never seen by outsiders. No sooner had he emigrated to San Francisco than he was drawn into the community of Afghan expatriates sustained by the dream of returning to their country -and then drawn back to the Islamic world himself to discover the nascent phenomenon of militant religious fundamentalism. Tamim Ansary has emerged as one of the most eloquent voices on the conflict between Islam and the West. His book is a deeply personal account of the struggle to reconcile two great civilizations and to find some point in the imagination where they might meet.

What is an 'all-IP' network? What difference will IP networking make to 3G services? Third Generation (3G) mobile offers access to broadband multimedia services - and in the future most of these, even voice and video, will be IP-based. However 3G networks are not based on IP technologies, rather they are an evolution from existing 2G networks. Much work needs to be done to IP QoS and mobility protocols and architectures for them to be able to provide the

functionality 3G requires. IP for 3G gives a comprehensive overview of 3G networking functionality and examines how IP protocols can be developed to provide some of the basic building blocks of a mobile system (mobility, QoS and call control) Features: * Clear explanation of how 3G works at the network level. * Review of IP protocol and architectural principles. * Extensive review, classification and analysis of IP mobility protocols - macro and micro-including IPv6. * Analysis of IP QoS protocols and proposed solutions for mobile networks. * Tutorial on SIP (Session Initiation Protocol) and how SIP can be used for multimedia session control. * Description of latest UMTS developments - including Release 5. * Discussion of 4G networks - what does 4G mean? IP for 3G will appeal to mobile telecommunications and network engineers who want to know about future developments as well as system designers and developers. Students and academics on postgraduate courses related to telecommunications, especially 3G networking or IP protocols, will find this text ideal supplementary reading, only assuming a general knowledge of GSM and general networking principles.

This book analyses the doctrinal structure and content of secondary liability rules that hold internet service providers liable for the conduct of others, including the safe harbours (or immunities) of which they may take advantage, and the range of remedies that can be secured against such providers. Many such claims involve intellectual property infringement, but the treatment extends beyond that field of law. Because there are few formal

international standards which govern the question of secondary liability, comprehension of the international landscape requires treatment of a broad range of national approaches. This book thus canvasses numerous jurisdictions across several continents, but presents these comparative studies thematically to highlight evolving commonalities and trans-border commercial practices that exist despite the lack of hard international law. The analysis presented in this book allows exploration not only of contemporary debates about the appropriate policy levers through which to regulate intermediaries, but also about the conceptual character of secondary liability rules.

Did you know that about 10,000 years ago humans went through a radical change in lifestyle in what is now called

the Agricultural Revolution? While this event propelled humans out of the stone age and into civilization it also ultimately catapulted us into our current way of life and into the chronic disease epidemic we have today. Western medicine sees our epidemic of disease as a problem that needs to be suppressed, but our chronic disease epidemic is really a symptom; a symptom of humans being removed from their natural environment in an evolutionary instant. Evolution is the most important part of biology that medicine forgot. In this book you will learn: Why most chronic disease is not genetic; The truth behind why our society is suffering from disease; How our epidemic of disease directly relates to the health of the planet; Strategies to right the ship, achieve better health, and save our species.

Global value chains (GVCs) break up the production process so that different steps can be carried out in different countries. Many smart phones and televisions, for example, are designed in the United States or Japan. They have sophisticated inputs, such as semiconductors and processors, which are produced in Korea or Taiwan Province of China. And they are assembled in China. They are then marketed and receive after-sale servicing in Europe and the United States. These complex global production arrangements have transformed the nature of trade. But their complexity has also created difficulties in understanding trade and in formulating policies that allow firms and governments to capitalize on GVCs and to mitigate negative side effects. This publication provides a detailed map of GVCs, enabling policymakers to have a better understanding of the ongoing

development and evolution of GVCs and the relationship between economic development and GVC participation. Copublished with the World Bank, OECD, IDE-JETRO, and the Research Center for Global Value Chain Research. The joint research undertaken by these organizations aims to synthesize the parties' knowledge and expertise on GVC studies and to contribute to better policymaking by the international

community.
