EMELY MELENDEZ

Sexualized Media Messages and Our Children QuickRead.com

This provocative book takes a look at children's consumption of sexualized media messages while providing parents, teachers, and professionals with strategies for abating their influence. In this eye-opening book, experienced child psychologist Jennifer W. Shewmaker contends that the manner in which a child is raised influences how they respond to media messages, particularly those shaded by sexual overtones. This text takes a hard look at the impact of advertisements, products, and entertainment on a child's psyche and offers strategies for helping kids become critical, active media consumers. Drawing from research in a wide variety of disciplines, this book explores the interpersonal factors within children's lives that impact how they learn to process sexualized media messages. The book argues that an increase in marketing to children along with media-based fabrications of beauty, masculinity, and femininity impact the confidence and character of young children who are often greatly affected by what they see and hear. The author shares invaluable tips for promoting strengths in children and adolescents of both genders and presents the protective influence of communities to help children dismiss distorted media images.

Applying Neuroscience to Business Practice

The definitive book on sensory branding, shows how companies appeal to consumers' five senses to sell products. Did you know that the gratifying smell that accompanies the purchase of a new automobile actually comes from a factory-installed aerosol can containing "new car" aroma? Or that Kellogg's trademarked "crunch" is generated in sound laboratories? Or that the distinctive click of a just-opened jar of Nescafé freeze-dried

coffee, as well as the aroma of the crystals, has been developed in factories over the past decades? Or that many adolescents recognize a pair of Abercrombie & Fitch jeans not by their look or cut but by their fragrance? In perhaps the most creative and authoritative book on how our senses affect our everyday purchasing decisions, global branding guru Martin Lindstrom reveals how the world's most successful companies and products integrate touch, taste, smell, sight, and sound with startling and sometimes even shocking results. In conjunction with renowned research institution Millward Brown, Lindstrom's innovative worldwide study unveils how all of us are slaves to our senses—and how, after reading this book, we'll never be able to see, hear, or touch anything from our running shoes to our own car doors the same way again. An expert on consumer shopping behavior, Lindstrom has helped transform the face of global marketing with more than twenty years of hands-on experience. Firmly grounded in science, and disclosing the secrets of all our favorite brands, *Brand Sense* shows how we consumers are unwittingly seduced by touch, smell, sound, and more.

You Are Not So Smart Academic Press

This book includes selected papers presented at the International Conference on Marketing and Technologies (ICMarkTech 2020), held at ISCTE - University Institute of Lisbon, in the city of Lisbon in Portugal, between 8 and 10 October 2020. It covers up-to-date cutting-edge research on artificial intelligence applied in marketing, virtual and augmented reality in marketing, business intelligence databases and marketing, data mining and big data, marketing data science, web marketing, e-commerce and v-commerce, social media and networking, geomarketing and IoT, marketing automation and inbound marketing, machine learning applied to marketing, customer data management and CRM, and neuromarketing technologies.

Learn how to use neuromarketing and understand the science behind it. Neuromarketing is a controversial new field where researchers study consumers' brain responses to advertising and media. Neuromarketing and the brain sciences behind it provide new ways to look at the age-old question: why do consumers buy? *Neuromarketing For Dummies* goes beyond the hype to explain the latest findings in this growing and often misunderstood field, and shows business owners and marketers how neuromarketing really works and how they can use it to their advantage. You'll get a firm grasp on neuromarketing theory and how it is impacting research in advertising, in-store and online shopping, product and package design, and much more. Topics include: How neuromarketing works. Insights from the latest neuromarketing research. How to apply neuromarketing strategies to any level of advertising or marketing, on any budget. Practical techniques to help your customers develop bonds with your products and services. The ethics of neuromarketing. *Neuromarketing for Dummies* demystifies the topic for business owners, students, and marketers and offers practical ways it can be incorporated into your existing marketing plans.

The Willpower Instinct Springer Nature

The 21st century has brought about many changes in the economic realm due to acceleration of globalization. The competitive landscape in numerous areas must always be reinvented to account for these changes, therefore making different marketing efforts a requirement for long-term success. *The Handbook of Research on Effective Marketing in Contemporary Globalism* provides readers with an understanding of the importance of marketing products and services across different cultures and languages in an era of high global competition. Intensified globalization, shifting demographics, and

rapid innovations in technology and productivity solidify this publication's importance to scholar-practitioners, business executives, and undergraduate/graduate students. *Introduction to Neuromarketing & Consumer Neuroscience* Springer
 If You Understand Brain Basics, You'll Sell More As much as 95% of our decisions are made by the subconscious mind. As a result, the world's largest and most sophisticated companies are applying the latest advances in neuroscience to create brands, products, package designs, marketing campaigns, store environments, and much more, that are designed to appeal directly and powerfully to our brains. The Buying Brain offers an in-depth exploration of how cutting-edge neuroscience is having an impact on how we make, buy, sell, and enjoy everything, and also probes deeper questions on how this new knowledge can enhance customers' lives. The Buying Brain gives you the key to • Brain-friendly product concepts, design, prototypes, and formulation • Highly effective packaging, pricing, advertising, and in-store marketing • Building stronger brands that attract deeper consumer loyalty A highly readable guide to some of today's most amazing scientific findings, The Buying Brain is your guide to the ultimate business frontier - the human brain.

Application of Neural Technology to Neuro-Management and Neuro-Marketing IGI Global, Medical Information Science Reference

Neuroscience is a multidisciplinary research area that evaluates the structural and organizational function of the nervous system. When applied to business practices, it is possible to investigate how consumers, managers, and marketers makes decisions and how their emotions may play a role in those decisions. Applying Neuroscience to Business Practice provides theoretical frameworks and current empirical research in the field. Highlighting scientific studies and real-world applications on how neuroscience is being utilized in business practices and marketing strategies to benefit organizations, as well as emergent business and management techniques being developed from this research, this book is a pivotal reference source for researchers, managers, and students. *Sensory Marketing* Createspace Independent Publishing Platform
 What is sensory marketing and why is it interesting and also important? Krishna defines it as marketing that engages the consumers' senses and affects their behaviors. In this edited book, the authors

discuss how sensory aspects of products, i.e., the touch, taste, smell, sound, and look of the products, affect our emotions, memories, perceptions, preferences, choices, and consumption of these products. We see how creating new sensations or merely emphasizing or bringing attention to existing sensations can increase a product's or service's appeal. The book provides an overview of sensory marketing research that has taken place thus far. It should facilitate sensory marketing by practitioners and also can be used for research or in academic classrooms.

[Handbook of Research on Narrative Advertising](#) John Wiley & Sons

In the years since it first published, *Neuroeconomics: Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition, a nearly complete revision of this landmark book, will set a new standard. This new edition features five sections designed to serve as both classroom-friendly introductions to each of the major subareas in neuroeconomics, and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies—each written by leading experts—lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, "The Neural Mechanisms for Choice, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices. The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all

chapters, making core issues in economics, psychology, and neuroscience accessible to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general. Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning, risk, inter-temporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference Published in association with the Society for

Neuroeconomics Basic Civitas Books

This book addresses the emerging field of neuromarketing, which, at its core, aims to better understand the impact of marketing stimuli by observing and interpreting human emotions. It includes contributions from leading researchers and practitioners, venturing beyond the tactics and strategies of neuromarketing to consider the ethical implications of applying powerful tools for data collection. The rationale behind neuromarketing is that human decision-making is not primarily a conscious process. Instead, there is increasing evidence that the willingness to buy products and services is an emotional process where the brain uses short cuts to accelerate the decision-making process. At the intersection of economics, neuroscience, consumer behavior, and cognitive psychology, neuromarketing focuses on which emotions are relevant in human decision-making, and uses this knowledge to make marketing more effective. The knowledge is applied in product design; enhancing promotions and advertising, pricing, professional services, and store design; and improving the consumer experience as a whole. The foundation for all of this activity is data gathering and analysis. Like many new processes and innovations, much of neuromarketing is operating far ahead of current governmental compliance and regulation and thus current practices are raising ethical issues. For example, facial recognition software,

used to monitor and detect a wide range of micro-expressions, has been tested at several airports—under the guise of security and counterterrorism. To what extent is it acceptable to screen the entire population using these powerful and intrusive techniques without getting passengers' consent? Citing numerous examples from the public and private sectors, the editors and contributing authors argue that while the United States has catalyzed technological advancements, European companies and governments are more progressive when it comes to defining ethical parameters and developing policies. This book details many of those efforts, and offers rational, constructive approaches to laying an ethical foundation for neuromarketing efforts.

Marketing and Smart Technologies

Routledge

Narration can be conceptualized as conveying two or more events (or an event with a situation) that are logically interrelated and take place over time and have a consistent topic. The concept includes every storytelling text. The advertisement is one of the text types that includes a story, and the phenomenon conceptualized as advertising narration has gained new dimensions with the widespread use of digital media. The Handbook of Research on Narrative Advertising is an essential reference source that investigates fundamental marketing concepts and addresses the new dimensions of advertising with the universal use of digital media. Featuring research on topics such as branding, mobile marketing, and consumer engagement, business professionals, copywriters, students, and practitioners will find this text useful in furthering their research exposure to evolutionary techniques in advertising.

Neuromarketing Simon and Schuster

By showing us the human brain at work, PET (positron emission tomography) scans are subtly--and sometimes not so subtly--transforming how we think about our minds. *Picturing Personhood* follows this remarkable and expensive technology from the laboratory into the world and back. It examines how PET scans are created and how they are being called on to answer myriad questions with far-reaching implications: Is depression an observable brain disease? Are criminals insane? Do men and women think differently? Is rationality a function of the brain? Based on interviews, media analysis, and participant observation at research labs and conferences, Joseph Dumit analyzes how assumptions designed

into and read out of the experimental process reinforce specific notions about human nature. Such assumptions can enter the process at any turn, from selecting subjects and mathematical models to deciding which images to publish and how to color them. Once they leave the laboratory, PET scans shape social debates, influence courtroom outcomes, and have positive and negative consequences for people suffering mental illness. Dumit follows this complex story, demonstrating how brain scans, as scientific objects, contribute to our increasing social dependence on scientific authority. The first book to examine the cultural ramifications of brain-imaging technology, *Picturing Personhood* is an unprecedented study that will influence both cultural studies and the growing field of science and technology studies.

B2B marketing is functioning in an increasingly fast-paced and complex business landscape, with a wealth of new technologies, tools and channels, and where customers are more in control of the buying process than ever before. With the imperative to become 'digital', B2B marketers have become consumed by the marketing activity itself - the tactics - instead of the outcomes marketers want and need to achieve for customers and businesses. *B2B Marketing Strategy* provides fresh insight into the challenges marketers are facing in such an environment and offers a new framework for developing B2B marketing strategy and plans. Written by an internationally recognised and award winning senior marketing strategist, *B2B Marketing Strategy* is a thought-provoking and comprehensive exploration of the state of B2B marketing. Expertly examined, this book will challenge the perspective of B2B marketers by confronting and refuting the many fallacies that currently dominate the industry. Filled with real-world case studies and practical, actionable insights, *B2B Marketing Strategy* takes the reader through three phases of thinking, doing and being different in order to make B2B marketing memorable in the hearts and minds of customers, creating lasting customer engagement.

The Growth Director's Secret IGI Global

A guide to the study of how and why you really make financial decisions While classical economics is based on the notion that people act with rational self-interest, many key money decisions—like splurging on an expensive watch—can seem far from rational. The field of behavioral economics sheds light on the many subtle and not-so-subtle factors that contribute

to our financial and purchasing choices. And in *Behavioral Economics For Dummies*, readers will learn how social and psychological factors, such as instinctual behavior patterns, social pressure, and mental framing, can dramatically affect our day-to-day decision-making and financial choices. Based on psychology and rooted in real-world examples, *Behavioral Economics For Dummies* offers the sort of insights designed to help investors avoid impulsive mistakes, companies understand the mechanisms behind individual choices, and governments and nonprofits make public decisions. A friendly introduction to the study of how and why people really make financial decisions The author is a professor of behavioral and institutional economics at Victoria University An essential component to improving your financial decision-making (and even to understanding current events), *Behavioral Economics For Dummies* is important for just about anyone who has a bank account and is interested in why—and when—they spend money.

Neuromarketing Essentials Frontiers Media SA

We're used to thinking about the self as an independent entity, something that we either have or are. In *The Ego Tunnel*, philosopher Thomas Metzinger claims otherwise: No such thing as a self exists. The conscious self is the content of a model created by our brain - an internal image, but one we cannot experience as an image. Everything we experience is "a virtual self in a virtual reality." But if the self is not "real," why and how did it evolve? How does the brain construct it? Do we still have souls, free will, personal autonomy, or moral accountability? In a time when the science of cognition is becoming as controversial as evolution, *The Ego Tunnel* provides a stunningly original take on the mystery of the mind.
