With the advent of genetic engineering and mapping of the human genome, public awareness concerning the contributions that genetic disorders make to illness or death has increased significantly. The fields of human and medical genetics have continued to expand and offer new ways of understanding, preventing, and managing patients with genetic disorders. At the core of the genetic approach are the ideas of anticipation and prevention, which are essential for modern medical practice.

Clinical Genetics: A Short Course explains the importance of being able to anticipate disease based on individual characteristics or a family history, and then providing the necessary measures to forestall further complications. Each informative chapter commences with a case presentation and an explanation of medical terms. As the book progresses and new concepts are introduced, each case is updated. Clinical Genetics clarifies that, although individual genetic disease may be rare, it is an inescapable part of medicine. Text contains: * Both basic principles and differential diagnosis and management * Case-oriented problems, including answers and solutions * Over 300 illustrations to clarify clinical cases * Actual patient

material * Glossary of genetic and medical terminology Clinical Genetics: A Short Course emphasizes clinical, rather than traditional human genetics, and is a vital resource for medical, clinical, and human geneticists, as well as other health care professionals.

This book helps readers to understand the analysis of genetic problems. Many students have a great deal of difficulty doing genetic analysis; this book emphasizes solutions, not just answers. The strategy is to provide the reader with the essential steps and the reasoning involved in conducting the analysis. Throughout the book, an attempt is made to present a balanced account of genetics. Topics center on Mendelian, cytogenetic, molecular, quantitative, and population genetics, with a few more specialized areas. Where relevant, the appropriate statistics necessary to make the analyses

are provided.

The analysis and interpretation of data is fundamental to the subject of genetics and forms a compulsory part of the undergraduate genetics curriculum.

Indeed, the key skills that a genetics student requires are an ability to design and understand experimental strategies and to use problem-solving skills to interpret experimental results and data. Genetics? No Problem! provides students with a graded set of problems that aim to enthuse, challenge and entertain the

reader. The book is divided into three sections - introductory; intermediate and advanced - each with 10 problems. For first level students there will be short genetics problems embedded in a wide range of scenarios, such as murder mysteries. As the book progresses, the stories will get longer and the science will get progressively more complex to challenge final year students and enable the reader to identify genetic disease in obscure organisms as well as designing and testing treatments and cures. Genetics? No Problem!: Takes a unique, innovative approach that provides students with a set of graded problems designed to develop both their skills, and their ability to tackle problems with confidence Includes problems embedded in a narrative, written in an interesting, informative and entertaining style by an Author with a proven track record in teaching, research and communication Is well illustrated in full colour throughout. The book will prove invaluable to all students of genetics across a range of disciplines needing to get to grips with the analysis and interpretation of data that is fundamental to the subject.

This book explains efficient solutions for segmenting the intensity levels of different types of multilevel images. The authors present hybrid soft computing techniques, which have advantages over conventional soft computing solutions as they incorporate data heterogeneity into the clustering/segmentation procedures. This is a useful introduction and reference for researchers and graduate students of computer science and electronics engineering, particularly in the domains of image processing and computational intelligence.

Spatial Learning Strategies: Techniques, Applications, and Related Issues reviews the state of the art in spatial learning

strategies and suggests ways in which such strategies (for example, spatial and semantic-network representations) may be more powerfully instantiated in text design and technology applications. Some of the most promising work in the field of learning strategies is documented.

Comprised of 15 chapters, this book begins with an introduction to some of the theoretical underpinnings of spatial learning strategies as well as selected theories of information processing. The next section contains reports on specific learner-oriented techniques that have been developed to improve the performances of students with respect to text processing. The discussion then turns to reports on specific techniques that have been developed and applied to other types of processing tasks (for example, test taking, problem solving) or to teacher-author communication, including text analysis and instructional strategies. The application of networking as a learning strategy to hearing-impaired students is also considered, along with schematizing, mapping, and concept structuring. The book concludes by assessing the implications of spatial strategies for

education and applied research. This monograph will be of interest to behaviorists, cognitive and educational psychologists, teachers, school administrators, and policymakers.

THE ULTIMATUM PRACTICE BOOK - 101

Topic-wise Speed Tests for RRB NTPC Non Technical Exam with 14 Practice Sets (10 in book & 4 Online CBT) 2nd Edition covers questions on all the IMPORTANT CONCEPTS which are required to crack this exam in the form of 101 SPEED TESTS. No matter where you PREPARE from - a coaching or any Guide Book - 101 SPEED TESTS provides you the right ASSESSMENT on each topic. Your performance provides you the right cues to IMPROVE your concepts so as to perform better in the

final examination. It is to be noted here that these are not mere tests but act as a checklist of student's learning and ability to apply concepts to different problems. The book is based on the concept of TRP – Test, Revise and Practice. It aims at improving your SPEED followed by STRIKE RATE which will eventually lead to improving your SCORE. How is this product different? • The book is updated with 5 Topical Tests on Current Affairs. • 1st unique product with 101 speed tests – 90 Part Tests + 8 Sectional Tests + 3 Full Tests + 10 Addl. Practice Sets in Books + 4 Addl. Online Practice Sets. • Each Part Test is based on small topics which are most important for the Non Technical Exam. Each test contains around 20-25 MCQs (on the latest pattern of the exam) depending upon its importance for the exam. • The whole syllabus has been divided into 4 sections which are further distributed into 98 topics including the Topical and Sectional Tests. 1. Arithmetic Ability is distributed into 16 Topical and 2 Sectional Tests. 2. General Intelligence is distributed into 15 Topical and 2 Sectional Tests. 3. General Science is distributed into 35 Topical (Physics - 12; Chemistry -

13; Biology - 10) and 2 Sectional Tests. 4. General Awareness is distributed into 24 Topical and 2 Sectional Tests. • In the end of each section a Sectional Test is provided so as to sum up the whole section. • Finally at the end 3 Full Tests are provided to make it 101 Tests. • Additional 14 Practice Tests (10 in book & 4 Online CBT) are provided so as to give the candidates a real feel of the final exam. • The 4 Online CBT can be accessed through an Access Code provided in the starting pages of the book. • In all, the book contains 3750+ Quality MCQ's in the form of tests. • Solutions to all the tests are provided at the end of the book. • It is our strong belief that if an aspirant works hard on the cues provided through each of the tests he/ she can improve his/ her learning and finally the SCORE by at least 20%.

Helping undergraduates in the analysis of genetic problems, this work emphasizes solutions, not just answers. The strategy is to provide the student with the essential steps and the reasoning involved in conducting the analysis, and throughout the book, an attempt is made to present a balanced account of genetics. Topics, therefore, center about Mendelian, cytogenetic, molecular, quantitative, and population genetics, with a few more specialized areas. Whenever possible, the student is provided with the appropriate basic statistics necessary to make some the analyses. The book also builds on itself; that is, analytical methods learned in early parts of the book are subsequently revisited and used for later analyses. A deliberate attempt is made to make complex concepts simple, and sometimes to point out that apparently simple concepts are sometimes less so on further

investigation. Any student taking a

genetics course will find this an invaluable aid to achieving a good understanding of

genetic principles and practice.
