During the last twenty years, the interest in public health leadership has continued to increase with the need to strengthen the infrastructure of public health, the events of September 11, 2001, the health reform movement, and scientific breakthroughs. The increasing role for primary care programs in the public health agenda, and the increasing deficit at the federal, state, and local level. In five parts, this book explores the basic theories and principles of leadership and then describes how they may be applied in the public health setting. Leadership skills and competencies, as well as methods for measuring and evaluating leaders are all thoroughly covered. This new third edition is an exhaustive revision that now includes extensive coverage of the leadership skills and tools that are critical to managing public health emergencies.

Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. Social Isolation and

Loneliness in Older Adults summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. Social Isolation and Loneliness in Older Adults considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

A Practical Approach for Health Care Management Mosby Incorporated

This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings.- Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

Strategic Compensation John Wiley & Sons

Having clear boundaries is essential to a healthy, balanced lifestyle. A boundary is a personal property line that marks those things for which we are responsible. In other words, boundaries define who we are and who we are not. Boundaries impact all areas of our lives: Physical boundaries help us determine who may touch us and under what circumstances -- Mental boundaries give us the freedom to have our own thoughts and opinions -- Emotional boundaries help us to deal with our own emotions and disengage from the harmful, manipulative emotions of others -- Spiritual boundaries help us to distinguish God's will from our own and give us renewed awe for our Creator -- Often, Christians focus so much on being loving and unselfish that they forget their own limits and limitations. When confronted with their lack of boundaries, they ask: - Can I set limits and still be a loving person? - What are legitimate boundaries? - What if someone is upset or hurt by my boundaries? - How do I answer someone who wants my time, love, energy, or money? - Aren't boundaries selfish? - Why do I feel guilty or afraid when I consider setting boundaries? Dr. Henry Cloud and Dr. John Townsend offer biblically-based answers to these and other tough questions, showing us how to set healthy boundaries with our parents, spouses, children, friends, co-workers, and even ourselves.

Longlisted for the National Book Award New York Times Bestseller

A former Wall Street quant sounds an alarm on the mathematical models that pervade modern life -- and threaten to rip apart our social fabric

We live in the age of the algorithm. Increasingly, the decisions that affect our lives--where we go to school, whether

we get a car loan, how much we pay for health insurance--are

being made not by humans, but by mathematical models. In

theory, this should lead to greater fairness: Everyone is judged

according to the same rules, and bias is eliminated. But as Cathy

O'Neil reveals in this urgent and necessary book, the opposite is

true. The models being used today are opaque, unregulated, and

uncontestable, even when they're wrong. Most troubling, they

reinforce discrimination: If a poor student can't get a loan

because a lending model deems him too risky (by virtue of his zip

code), he's then cut off from the kind of education that could pull

him out of poverty, and a vicious spiral ensues. Models are

propping up the lucky and punishing the downtrodden, creating a

"toxic cocktail for democracy." Welcome to the dark side of Big

Data. Tracing the arc of a person's life, O'Neil exposes the black

box models that shape our future, both as individuals and as a

society. These "weapons of math destruction" score teachers and

students, sort resumes, grant (or deny) loans, evaluate workers,

target voters, set parole, and monitor our health. O'Neil calls on

modelers to take more responsibility for their algorithms and on

policy makers to regulate their use. But in the end, it's up to us to

become more savvy about the models that govern our lives. This

important book empowers us to ask the tough questions, uncover

the truth, and demand change. -- Longlist for National Book
