The "Inspection Authorization Test Prep" provides Aviation Maintenance Technicians (AMTs) with all the information needed to pass the FAA's Knowledge Exam for Inspection Authorization, and helps candidates become familiar with the privileges and limitations of the highest level of maintenance certification. This book is an important reference source for all AMTs seeking to add Inspection Authorization (IA) to his or her qualifications, as well as AMT schools preparing students for the IA test. All IA candidates must take and pass the FAA's exam, yet it remains a "closed test" in that the exact database of questions is not available to the public, which makes the IA Test Prep a great way to prepare for it. The IA exam differs from other FAA exams in that questions do not refer to a specific figure. Instead, applicants must learn to glean the information they need from the FAA Supplement (CT-8080-8) made available for use during the test. The over 500 sample questions typify those that candidates are likely to encounter, and train readers in the use of the available documents. Answer choices are supported with explanations, with FAA references identified for further study. Also provides details on what applicants need to know about the certification process, insight into the function of an IA, and excerpts of regulations, advisory circulars, airworthiness directives, type certificate data sheets, FAA orders and aircraft specifications. Resources such as pertinent excerpts from these FAA documents and more are reprinted in this study guide; additionally, readers can access additional study material for this book at a special "Reader Resources" page at the ASA website. The IA Test Prep conveniently compiles the reference materials necessary to prepare for this exam into one volume, for an organized study program that AMT schools, instructors, and individuals alike can use to streamline their studies.

ACS General Chemistry Lippincott Williams & Wilkins

"This is not the typical "question-answer-question-answer" text-only format. This book is often referred to as the 'Cliffs Notes' for the private pilot checkride. This is the prep and study guide that will help you ace your checkride! Most material is presented in easy-to-flashcard and memorize charts, diagrams and mnemonics. The book begins by outlining the steps to take prior to your checkride under the latest ACS including hours, training, required logbook endorsements, and then explains the rest of the exam procedure which concludes with the debriefing. The study guide then goes into greater detail for each anticipated area of the checkride including: 1. checklists to memorize (and those not to memorize); 2. airspace and VFR minimums; 3. weather (reports, clouds, winds aloft, pressure systems, thunderstorms, the GFA weather chart website, types of fog, etc.), 4. navigation, including: types of navigation, lost procedures, VOR navigation, useful websites, NOTAMS, step-by-step instructions for completing a full navigation log, etc.); 5. safety & wellness (common in-flight sicknesses, rules for scuba divers, in-depth explanation of sensory illusions, etc.); 6. airport signs (including marshaling signals and a complete color runway diagram, etc.); 7. documents & inspections (learn an easier way to remember "TOMATOFLAMES"); 8. performance (including an explanation of leaning, and detonation vs. pre-ignition); 9. communications (towered airports,

airspace transitions, calling FSS from an RCO, Class C procedure, activating flight plans, requesting flight following, etc.); 10. passenger briefing (including a sample briefing for your knee board); 11. maneuvers, takeoffs & landings (including a one-page maneuver reference card, plus a one-page list of all ACS maneuvers, takeoffs, landings, etc. which should be used during your final 3 hours of exam training with your CFI); 12. special emphasis areas (although they are now incorporated into the ACS, you should still be familiar with these areas because they are inherently tested throughout the exam) There is also a quick-reference flow chart for the risk management expectations; 13. the "other things to study" chapter is chock-full of the miscellaneous areas that you will be expected to know such as airspeeds, altitudes, stall/spin awareness & recovery, carb icing, slips, lapse rates, V-speeds, unusual attitude recovery, SVFR, pitotstatic system, left-turn tendencies, a detailed engine diagram with fourteen questions you should be able to answer, and much more; 14. select FAR/AIM summaries (the select rules you should be most familiar with); 15. three full-color sectional chart quizzes (with answer keys); 16. a chapter on "going the extra mile" and finally a detailed list of what should (probably) be in your flight bag. You will notice that this book is not hundreds of pages, nor is it priced as high as other books on this topic. The length is purposefully limited because you cannot effectively study and memorize hundreds of pages prior to your practical test. In addition, the size is such that you can easily take it with you wherever you go and study when time permits." -- Amazon.com.
