A hilarious "quizography" on the dumbfounding life of George W. Bush Pop Quiz George W. Bush is: the greatest American statesman since Abraham Lincoln. a champion of the underdog and a thorn in the side of the wealthy. articulate, thoughtful, and judicious—a very, very wise man. linguistically challenged ("I know how hard it is to put food on your family"), proudly ignorant (he actually boasts about not reading newspapers), and inexplicably addicted to nicknaming (aide Karl Rove is "Turd Blossom")—in short, the least qualified, most polarizing figure ever to be appointed President of the United States, and the only White House occupant to have once been videotaped picking his nose. If you answered d, this book is for you. In *The George W. Bush Quiz Book*, New Yorker humorist and bestselling author of *The Clothes Have No Emperor*, Paul Slansky, brings you a comical compendium of quizzes filled with hundreds of questions and answers on the personal and political life of George W. The result is a crash course in everything Dubya. Thoroughly researched and devastatingly funny, now there's finally a quiz George W. Bush should be able to ace (pass).

"There is no easy way to walk to freedom anywhere, and many of us will have to pass through the valley of the shadow of death again and again before we reach the mountain tops of our desires." -Nelson Mandela, September 1953 In spreading the message of freedom, equality, and human dignity, Nelson Mandela helped transform not only his own nation, but the entire world. Now his most important speeches are collected in a single volume. From the eve of his imprisonment to his release twenty-seven years later, from his acceptance of the Nobel Peace Prize to his election as South Africa's first black president, these speeches

span some of the most pivotal moments of Mandela's life and his country's history. Arranged thematically and accompanied by tributes from leading world figures, Mandela's addresses memorably illustrate his lasting commitment to freedom and reconciliation, democracy and development, culture and diversity, and international peace and well-being. The extraordinary power of this volume is in the moving words and intimate tone of Mandela himself, one of the most courageous and articulate men of our time.

Survey of Science History & Concepts Course Description
Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in *Exploring the World of Mathematics*. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. *Exploring the World of Physics* is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. *Exploring the World of Biology* is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. *Exploring the World of Chemistry* brings science to life and is a wonderful learning tool with many illustrations and biographical information.

Advanced Pre-Med Studies Course Description Semester 1: From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In *Exploring the History of Medicine*, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs*. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. Semester 2: Body by Design defines the basic anatomy and physiology in each of 11 body systems from a creationist viewpoint. Every chapter explores the wonder, beauty, and creation of the human body,

giving evidence for creation, while exposing faulty evolutionist reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries, while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body. Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process.

As author Bennett Schwartz says in *Memory: Foundations and Applications*, it is hard to imagine an aspect of psychology more fundamental than memory. This unique text covers key memory models, theories, and experiments, but goes a step further to demonstrate how students can apply these concepts to their everyday lives and improve their own ability to learn and remember. A new, three-pronged organization opens the text with an overview of the psychological science of Memory, builds expertise in advanced topics, and then allows the reader to think about how memory research can benefit society. Neuroscience research is integrated throughout each chapter to demonstrate our understanding of where memory processes occur and how researchers use data to shape memory theories. New to the Fourth Edition: New chapters on memory science's relevance to the legal system, memory issues in psychiatric disorders, and application of memory research to improving the efficiency of one's own memory. Reorganized chapter on memory development and an enlarged section on prospective memory now combined with the chapter on metamemory. Updated sections on cognitive maps, autobiographical memory and emotion, and expanded discussion of the memory component of Alzheimer's disease.
