This textbook explores probability and stochastic processes at a level that does not require any prior knowledge except basic calculus. It presents the fundamental concepts in a step-by-step manner, and offers remarks and warnings for deeper insights. The chapters include basic examples, which are revisited as the new concepts are introduced. To aid learning, figures and diagrams are used to help readers grasp the concepts, and the solutions to the exercises and problems. Further, a table format is also used where relevant for better comparison of the ideas and formulae. The first part of the book introduces readers to the essentials of probability, including combinatorial analysis, conditional probability, and discrete and continuous random variable. The second part then covers fundamental stochastic processes, including point, counting, renewal and regenerative processes, the Poisson process, Markov chains, queuing models and reliability theory. Primarily intended for undergraduate engineering students, it is also useful for graduate-level students wanting to refresh their knowledge of the basics of probability and stochastic processes.

Several devastating conflicts have persisted in Sub-Saharan Africa for the past 20 years or more. Some countries are still emerging from the era of cold war politics, while debilitating internal struggles continue to plague others. Ethiopia, Namibia, South Africa, Uganda, and more recently, Angola and Mozambique are examples of the former. The latter is illustrated by the situation in countries such as Liberia, Somalia and the Sudan. This study, the transition from war to peace in Sub-Saharan Africa, offers practical guidance and examples of good practice for improving

the design and implementation of programs for demobilization, reinsertion, and reintegration of ex-combatants and their dependents in client countries. It also provides a list of early warning signals that indicate whether the demobilization and reintegration programs (DRPs) process is not going according to plan and suggests preventive actions. Work on the ground, as well as case analysis in countries such as Ethiopia, Namibia, Uganda, Angola, Mozambique, and Rwanda form the basis of the suggested good practice in DRPs.

A proponent of the poor and landless peasants, Miguel is commissioned by an old friend to plan strategies for insurgents operating in the northern part of Mexico. After he and Anne Marie trek north, Miquel learns that he will be involved in planning strategies and raids not only for his compatriot, but also for one of Mexico's most infamous desperados, Francisco Pancho Villa. Now lovers and committed to each other, Anne Marie blindly accepts Miquel's calling. Eventually, she is presented with a young Indian maid recued in one of Villa's raids. Unaware of the pillaging, raping and shooting that Villa and his men have been conducting in the name of freedom and justice, she is inadvertently exposed to Villa's devastation while seeking medical attention at another village. Pleading with Miquel to stop this carnage, he passionately convinces her that he is only planning strategies. Perceiving the intensity of his fervor, Anne Marie realizes that she cannot dissuade Miquel. After overhearing his plans for a raid by Villa's men on a nearby hacienda, now under the charge of an American Army major assisting the Mexican government in its attempt to diffuse and quell insurgent uprisings, Anne Marie is torn between her loyalty to Miquel and to a United States citizen in imminent danger of attack and death by Villa's insurgents.
