These analyses range from: monitoring and judging firms' performance relative to competitors; providing insights on the financial policies to be used; financial reports to investors including evaluation of new business to be acquired. They can be used to rate and evaluate companies before they are recommended to clients by security analysts; valuation of prospective buy outs, mergers and acquisitions and also come in handy in the evaluation of the creditworthiness of customers before they are given loans by banks (Healy & Krishna, 2012).

The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems,

intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to: · Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems · Identify opportunities to fill those voids; for example, by building or improving market institutions yourself · Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities. Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.

Edited by Harvard Business School professor Jay W. Lorsch, the preeminent authority on corporate boards, this book gathers the leading voices from business and academia to address the challenges of governance in the 21st century. We are at a crucial juncture in the evolution of business and the economy. We must now reshape the structures and practices of business leadership to avoid going down the same path again. To a large extent this is a question of governance and the role of corporate boards, to help us wrestle with critical issues like CEO performance and succession, compensation, and forward-looking strategy. In *The Future of Boards*, governance sage Jay Lorsch has gathered thought leaders and some of the most experienced voices at Harvard Business School to describe the moment we are in, identify and analyze the salient issues, and chart a course for the future. Articles include Bill George on how boardroom conflicts can be understood and managed; Krishna Palepu on how directors can gain the knowledge necessary to effectively oversee strategy; Lorsch himself and colleague Rakesh Khurana on how boards can set reasonable compensation while still motivating top talent; and Ken Merchant and Kat Pick on group pathologies in the boardroom and how to overcome them. *The Future of Boards* will be must reading for CEOs, business and industry leaders, policymakers, and anyone involved in influencing and reshaping business in the 21st century.
