Sustainable Green
Chemistry, the 1st volume
of Green Chemical
Processing, covers several
key aspects of modern
green processing. The
scope of this volume goes
beyond bio- and organic
chemistry, highlighting
the ecological and
economic benefits of
enhanced sustainability in
such diverse fields as
petrochemistry, metal
production and
wastewater treatment.
The authors discuss
recent progresses and
challenges in the
implementation of green
chemical processes as

well as their transfer from
academia to industry and
teaching at all levels.

Selected successes in the
greening of established
processes and reactions
are presented, including
the use of switchable
polarity solvents, actinide
recovery using ionic
liquids, and the removal
of the ubiquitous
bisphenol A molecule
from effluent streams by
phytodegradation.

When, forty years ago, as
a student of Charles
Coulson in Oxford I began
work in theoretical
chemistry, I was provided
with a Brunsviga
calculator-a small

mechanical device with a
handle for propulsion,
metal levers for setting
the numbers, and a bell
that rang to indicate
overflow. What has since
come to be known as
computational chemistry
was just beginning. There
followed a long period in
which the fundamental
theory of the "golden age"
(1925-1935) was
extended and refined and
in which the dreams of
the early practitioners
were gradually turned into
hard arithmetic reality. As
a still-computing survivor
from the early postwar
days now enjoying the
benefits of unbelievably
improved hardware, I am
glad to contribute a
foreword to this series
and to have the
opportunity of providing a
little historical
perspective. After the

Brunsviga came the electromechanical machines of the late 1940s and early 1950s, and a great reduction in the burden of calculating molecular wavefunctions. We were now happy. At least for systems containing a few electrons it was possible to make fully ab initio calculations, even though semiempirical models remained indispensable for most molecules of everyday interest. The 1950 papers of Hall and of Roothaan represented an important milestone along the road to larger-scale non empirical calculations, extending the prewar work of Hartree and Fock from many-electron atoms to many-electron molecules- and thus into "real chemistry.

Oxford University Press, USA

This work aims to familiarize students with the fundamentals of colloid and surface science, from various types of colloids and colloidal phenomena, and classical and modern characterization/measurement techniques to applications of colloids and surface science in engineering, technology,

chemistry, physics and biological and medical sciences. The Journal of Textile Studies proclaims "High praise from peers . . . contains valuable information on many topics of interest to food rheologists and polymer scientists ...[The book] should be in the libraries of academic and industrial food research organizations" and Chromatographia describes the book as "...an excellent textbook, excellently organised, clearly written and well laid out."

Organophosphorus chemistry is an important discipline within organic chemistry. Phosphorus compounds, such as phosphines, trialkyl phosphites, phosphine oxides (chalcogenides), phosphonates, phosphinates and $>P(O)H$ species, etc., may be important starting materials or intermediates in syntheses. Let us mention the Wittig reaction and the related transformations, the Arbuzov- and the Pudovik reactions, the Kabachnik-Fields condensation, the Hirao reaction, the Mitsunobu

reaction, etc. Other reactions, e.g., homogeneous catalytic transformations or C-C coupling reactions involve P-ligands in transition metal (Pt, Pd, etc.) complex catalysts. The synthesis of chiral organophosphorus compounds means a continuous challenge. Methods have been elaborated for the resolution of tertiary phosphine oxides and for stereoselective organophosphorus transformations. P-heterocyclic compounds, including aromatic and bridged derivatives, P-functionalized macrocycles, dendrimers and low coordinated P-fragments, are also of interest. An important segment of organophosphorus chemistry is the pool of biologically-active compounds that are searched and used as drugs, or as plant-protecting agents. The natural analogue of P-compounds may also be mentioned. Many new phosphine oxides, phosphinates, phosphonates and phosphoric esters have been described, which may find application on a broad scale. Phase transfer catalysis, ionic

liquids and detergents also have connections to phosphorus chemistry. Green chemical aspects of organophosphorus chemistry (e.g., microwave-assisted syntheses, solvent-free accomplishments, optimizations, and atom-efficient syntheses) represent a dynamically developing field. Last, but not least, theoretical approaches and computational chemistry are also a strong sub-discipline within organophosphorus chemistry.

The Chemistry Exam Vocabulary Workbook is an awesome tool to use before a course of study as it will help you develop a strong working Insider's Language before you even begin your review. Learn the Secret to Success! After nearly 20 years of teaching Lewis Morris discovered a startling fact: Most students didn't struggle with the subject, they struggled with the language. It was never about brains or ability. His students simply didn't have the knowledge of the specific language needed to succeed. Through experimentation and research, he discovered that for any subject there was a list of essential words, that, when mastered, unlocked a student's ability to progress in the subject. Lewis called this set of vocabulary the "Insider's Words". When he applied these "Insider's Words"

the results were incredible. His students began to learn with ease. He was on his way to developing the landmark series of workbooks and applications to teach this "Insider's Language" to students around the world.

As teachers we often tend to expect other countries to teach chemistry in much the same way as we

do, but educational systems differ widely. At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world: Teaching Chemistry around the World. 25 countries have participated in the project. The resulting country studies are presented in this book. This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries. Especially in the case of the school subject chemistry, which is very unpopular on the one hand and occupies an exceptional position on the other hand – due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving – we have to learn from each others' educational systems. *Scientific Papers, Dept. of Chemistry and Chemical Engineering* MDPI
The mission of the International Journal of Educational Reform (IJER) is to keep readers up-to-date with worldwide developments in

education reform by providing scholarly information and practical analysis from recognized international authorities. As the only peer-reviewed scholarly publication that combines authors' voices without regard for the political affiliations perspectives, or research methodologies, IJER provides readers with a balanced view of all sides of the political and educational mainstream. To this end, IJER includes, but is not limited to, inquiry based and opinion pieces on developments in such areas as policy, administration, curriculum, instruction, law, and research. IJER should thus be of interest to professional educators with decision-making roles and policymakers at all levels turn since it provides a broad-based conversation between and among policymakers, practitioners, and academicians about reform goals, objectives, and methods for success throughout the world. Readers can call on IJER to learn from an international group of reform implementers by discovering what they can do that has actually worked. IJER can also help readers to understand the pitfalls of current reforms

in order to avoid making similar mistakes. Finally, it is the mission of IJER to help readers to learn

about key issues in school reform from movers and shakers who help to study

and shape the power base directing educational reform in the U.S. and the world.
