The Bloomsbury Handbook of the Anthropology of Sound presents the key subjects and approaches of anthropological research into sound cultures. What are the common characteristics as well as the inconsistencies of living with and around sound in everyday life? This question drives research in this interdisciplinary area of sound studies: it propels each main chapter of this handbook into a thoroughly different world of listening, experiencing, receiving, sensing, dreaming, naming, desiring, and crafting sound. This handbook is composed of six sections: sonic artifacts; sounds and the body; habitat and sound; sonic desires; sounds and machines; and overarching sensologies. The individual chapters explore exemplary research objects and put them in the context of methodological approaches, historical predecessors, research practices, and contemporary research gaps. This volume offers therefore one of the broadest, most detailed, and instructive overviews on current research in this area of sensory anthropology.

*Essays in the History of Linguistic Anthropology* Routledge

DIVAn archival history of governmental investigations of anthropologists in the 1950s, based on over 20,000 pages of documents obtained by the author under the Freedom of Information Act./div *The Palgrave Handbook of Institutional Ethnography* Academic Conferences Limited Challenges and Solutions in Ethnographic Research: Ethnography with a Twist seeks to rethink ethnography ‘outside the box’ of its previous tradition and to develop ethnographic methods by critically discussing the process, ethics, impact and knowledge production in ethnographic research. This interdisciplinary edited volume argues for a ‘twist’ that supports openness, courage, and creativity to develop and test innovative and unconventional ways of thinking and doing ethnography. ‘Ethnography with a twist’ means both an intentional aim to conduct ethnographic research with novel approaches and methods but also sensitivity to recognize and creativity to utilize different kinds of ‘twist moments’ that ethnographic research may create for the researcher. This edited volume critically evaluates new and old methodological tools and their ability to engage with questions of power difference. It proposes new collaborative methods that allow for co-production and co-creation of research material as well as shared conceptual work and wider

distribution of knowledge. The book will be of use to ethnographers in humanities and social science disciplines including sociology, anthropology and communication studies.

**Indian Anthropology** BRILL

Indian Anthropology: Anthropological Discourse in Bombay 1886–1936 is an important contribution to the history of Indian anthropology, focusing on its formative period. It looks at the political economy of knowledge production and the anthropological discourse in Bombay during the late nineteenth century. This seminal volume highlights the much forgotten and ignored contribution of the Bombay Presidency anthropologists, many of whom were Indians, from different backgrounds, such as lawyers, civil servants, and men of religion, much before professional anthropology was taught in India. The other contributions are by pioneers from Bengal, Punjab, and United Provinces — all British administrators turned scholars. This volume is divided into three parts: Part I deals with the six contributions on the history of the development of anthropology in India; Part II deals with four contributions on the methodology and collecting ethnographic data; and Part III deals with four contributions on theoretical analysis of ethnographic facts. The roots of many contemporary conflicts and social issues can be traced to this formative period of anthropology in India. This book will be useful to students and researchers of anthropology, sociology, public administration, modern history, and demography. It will also be of interest to civil servants, students of history, Indian culture and society, religions, colonial history, law, and South Asia studies.

*A Reader in Medical Anthropology* Duke University Press

Advancing the rising field of engaged or participatory anthropology that is emerging at the same time as increased opposition from Indigenous peoples to research, this book offers critical reflections on research approaches to-date. The engaged approach seeks to change the researcher-researched relationship fundamentally, to make methods more appropriate and beneficial to communities by involving them as participants in the entire process from choice of research topic onwards. The aim is not only to change power relationships, but also engage with non-academic audiences. The advancement of such an egalitarian and inclusive approach to research can provoke strong opposition. Some argue that it threatens academic rigour and worry about the undermining of disciplinary authority. Others point to the difficulties of establishing an appropriately non-ethnocentric moral stance and navigating the complex problems communities face. Drawing on the experiences of Indigenous scholars, anthropologists and development professionals acquainted with a range of cultures, this book furthers our understanding of pressing issues such as interpretation, transmission and ownership of Indigenous knowledge, and

appropriate ways to represent and communicate it. All the contributors recognise the plurality of knowledge and incorporate perspectives that derive, at least in part, from other ways of being in the world.

*An Anthropology of Biomedicine* SAGE

Time - a fundamental component of human thought and experience - is quite enigmatic and elusive when it comes to defining it. In *The Evolution of Time: Studies of Time in Science, Anthropology, Theology* scholars from the fields of physics, mathematics, biology, neuroscience, psychology, philosophy and theology draw from their own field of knowledge and expertise and present their understanding of the time phenomenon. Time as a dynamic interplay of being and becoming, the different temporalities we encounter in nature, the human dimension of time, are all important issues presented and thoroughly analyzed in the e-book. The e-book has a manifest trans-disciplinary character and it is a suitable for readers interested in evolution, the dynamics of time and the complexity of our own conceptions of time.

**Anthropological Papers** Rowman & Littlefield

American anthropology in the late twentieth century interrogated and depicted the worlds of others, past and present, in subtle and incisive ways while increasingly questioning its own

authority to do so. Marxist, symbolic, and structuralist thought shaped the fieldwork and conclusions of many researchers around the globe. Practicing anthropology blossomed and grew rapidly as a subdiscipline in its own right. There emerged a keener appreciation of both the history of the discipline and the histories of those studied. Archaeologists witnessed a resurgence of interest in the concept of culture. The *American Anthropologist* also made systematic efforts to represent the field as a whole, with biological anthropology and linguistics particularly adept at crossing subdiscipline boundaries. Proliferation of specialized areas within sociocultural anthropology encouraged work across the subdisciplines. The thirty selections in this volume reflect the notable trends and accomplishments in American anthropology during the closing decades of the millennium. An introduction by Regna Darnell offers a historical background and critical context that enable readers to better understand the changes and continuity in American anthropology during this time.
