The Earthshot concept is simple: Urgency + Optimism = Action. We have ten years to turn the tide on the environmental crisis, but we need the world’s best solutions and one shared goal - to save our planet. It’s not too late, but we need collective action now. The Earthshots are unifying, ambitious goals for our planet which, if achieved by 2030, will improve life for all of us, for the rest of life on Earth, and for generations to come. They are to: · Protect and Restore Nature · Clean our Air · Revive our Oceans · Build a Waste-Free World · Fix our Climate EARTHSHOT: HOW TO SAVE OUR PLANET is the first definitive book about how these goals can tackle the environmental crisis, from rainforests to coral reefs, via wilderness, cities and in our own homes. It is a critical contribution to the most important story of the decade.

#1 NEW YORK TIMES BESTSELLER • “The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon.”—Andrew Solomon, author of *The Noonday Demon* With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An “epoch-defining book” (*The Guardian*) and “this generation’s *Silent Spring*” (*The Washington Post*), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today’s. Praise for *The Uninhabitable Earth* “*The Uninhabitable Earth* is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet.”—Farhad Manjoo, *The New York Times* “Riveting. . . . Some readers will find Mr. Wallace-Wells’s outline of possible futures alarmist. He is indeed alarmed. You should be, too.”—*The Economist* “Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the ‘eerily banal language of climatology’ in favor of lush, rolling prose.”—Jennifer Szalai, *The New York Times* “The book has potential to be this generation’s *Silent Spring*.”—*The Washington Post* “*The Uninhabitable Earth*, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book.”—Alan Weisman, *The New York Review of Books*

Reproducing one of the most advanced satellite surveys of Earth in its entirety, *The Complete Earth* explores our planet, explaining the how and when of its mountain ranges, deserts, ice-sheets, volcanoes and oceans. From pole to pole. *The Complete Earth* presents one of the most advanced portraits of our planet ever created Within these pages, data from NASA’s most advanced Earth observing satellites has been combined to produce a cloud-free, digital atlas of the entire planet—a mappamundi for the Information Age. At a scale of 53 kilometres to every centimetre (93 miles to an inch), we can trace the Amazon from Andean headwaters to Atlantic mouth, explore the trackless sand seas of the Sahara, and follow the corrugated ridges of hills and mountains that mark the front-line of India’s continental collision with Eurasia. We can track the ebb and flow of seasons across the globe, watching snows fall in the North as they melt in the South and desert lands bloom and fade as rains come and go. Combining NASA’s digital portrait of the planet with high resolution satellite imagery that zooms in on noteworthy features—from volcanoes to asteroid craters, river deltas to glaciers—*The Complete Earth* creates an unprecedented view of our planet’s face. Social and political boundaries are invisible and irrelevant, what we see instead is the landscape of the whole Earth - the mountains and deserts, seas and oceans that have shaped human history. Yet this configuration of rock and water represents a fleeting geological moment, having existed for no more than 4 million years—a mere 0.01 percent of the planet’s lifetime. But look closer and a deeper past emerges. Earth’s 4.5 billion year history can be reconstructed from the layered, twisted and folded rocks that adorn its surface. To understand how to read the planet’s deep history, *The Complete Earth* descends far beneath the continents and oceans to reveal the tectonic plates they rest on. It explains how the ceaseless jostling of these plates has sculpted Earth’s ever-changing face and tracks their movements over millennia to reconstruct global views of not only the planet’s past, but also its future.

**The Uninhabitable Earth** John Murray

The earth has died many times, and it always comes back looking different. In an exhilarating, surprising exploration of our planet, Craig Childs takes readers on a firsthand journey through apocalypse, touching the truth behind the speculation. *Apocalyptic Planet* is a combination of science and adventure that reveals the ways in which our world is constantly moving toward its end and how we can change our place within the cycles and episodes that rule it. In this riveting narrative, Childs makes clear that ours is not a stable planet, that it is prone to sudden, violent natural disasters and extremes of climate. Alternate futures, many not so pretty, are constantly waiting in the wings. Childs refutes the idea of an apocalyptic end to the earth and finds clues to its more inevitable end in some of the most physically challenging places on the globe. He travels from the deserts of Chile, the driest in the world, to the genetic wasteland of central Iowa to the site of the drowned land bridge of the Bering Sea, uncovering the micro-cataclysms that predict the macro: forthcoming ice ages, super-volcanoes, and the conclusion of planetary life cycles. Childs delivers a sensual feast in his descriptions of the natural world and a bounty of unequivocal science that provides us with an unprecedented understanding of our future.

At this time in the development of the Earth species, the brain/mind does not have a large enough data acquisition and computing capacity to take in the multidimensions of the walk-in process. The characteristics of these dimensions would allow for many types of spirit activity on the Earth plane

beyond the simple (actually, simplistic) explanation of a single soul unit changing places with another single soul. Spirit and consciousness are more fluid and variable than your world has considered. We will tell you that spirit guides and guardian angels surround everyone who is participating in these expanded spirit processes. The increasing number of walk-ins at this time is in service to the ascension, or step up in consciousness, of the species. These participants can always call on guides for assistance. We Pleiadians are guides in the project. We are always available and we wish you peace. -- The Pleiadian Light
