KARTER HERRERA

The Case for Degrowth John Wiley & Sons
This accomplished

book argues that we can only make sense of environmental issues if we consider them as part of a more encompassing process of social transformation. It asks whether there is an

emerging consensus between social scientists on the central issues in the debate on environmental change, and if concerns about the environment constitute a major prop to the process of globalization? The book provides a thorough discussion of the central themes in environmental sociology, identifying two traditions: ecological modernization theory and risk society theory.

On October 14-19, 1990, the 6th International Conference on the Conservation of Earthen Architecture was held in Las Cruces, New Mexico. Sponsored by the GCI, the Museum of New

Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern technologies and materials to site

conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

Local Governance in Western Europe Verso Books

This book, first published in 2005, develops a comparative model of intergovernmental bargaining to account for variation in the capacity of federations in the developing world to undertake economic policy reform, suggesting that many market reform policies are a function of a constant process of bargaining between national and regional leaders struggling for political survival. As the degree of national-regional disagreement mounts, collective

action on reforms that require implementation at multiple levels of government becomes more difficult. The degree to which the two factors conflict depends on four factors: the individual electoral interests, a shared intergovernmental fiscal system, the manner in which regional interests are represented in national policy making and the levers of partisan influence national leaders have over subnational politicians. In testing the argument with a combination of cross-sectional time-series and case study analysis, this book contributes to the broad literatures on development and the comparative political economy of federalism

and decentralization.

organizations, which challenged the status quo after 1968. In the new edition, Dr Montgomery continues the story from 1982 to the present, offering a detailed account of the evolution of the war. She examines why Duarte's two inaugural promises, peace and economic prosperity could not be fulfilled and analyzes the electoral victory of the oligarchy in 1989. The final chapters closely follow the peace negotiations, ending with an assessment of the peace accords, and evaluate the future prospects for El Salvador and for the 1994 elections. *Being an Account of Books and of Men in the Spanish Conquest and Settlement of the Sixteenth-century New World* Routledge

Brings together over 40 essential readings, which illustrate the diversity of political responses to environmental issues. They are organized in a way that emphasizes the differences and debates across the various schools of thought on environmental affairs.

The Idea of Latin America is a geo-political manifesto which insists on the need to leave behind an idea which belonged to the nation-building mentality of nineteenth-century Europe. Charts the history of the concept of Latin America from its emergence in Europe in the second half of the nineteenth century through

various permutations to the present day. Asks what is at stake in the survival of an idea which subdivides the Americas. Reinstates the indigenous peoples and migrations excluded by the image of a homogenous Latin America with defined borders. Insists on the pressing need to leave behind an idea which belonged to the nation-building mentality of nineteenth-century Europe.

Federalism and the Market John Wiley & Sons

Where is the common ground for feminist theory and Latin American culture? Jean Franco explores Mexican women's struggle for interpretive power in relation to the Catholic religion, the nation, and post-modern

society; and examines the writings of women who wrote under the shadow of recognized male writers, as well as the works of more marginal figures. In this original and skillfully written book Franco demonstrates the many feminisms that emerge in apparently rigid and adverse situations, and provides the foundation for a more comprehensive, less ethnocentric feminist theory.

Sexuality, Love and Eroticism in Modern Societies John Wiley & Sons

This book, a trenchant analysis of schooling within the capitalist world system, where educational reforms are directed to the satisfaction of the business community, military industrial

complex, and corporate sector, is a work combating injustice and authoritarianism prevalent in the Americas.

The sexual revolution: an evocative term, but what meaning can be given to it today? How does 'sexuality' come into being and what connections does it have with the changes that have affected personal life on a more general plane? In answering these questions, Anthony Giddens disputes many of the dominant interpretations of the role of sexuality in modern culture. The emergence of what the author calls plastic

sexuality - sexuality freed from its intrinsic relation to reproduction - is analysed in terms of the long-term development of the modern social order and social influences of the last few decades. Giddens argues that the transformation of intimacy, in which women have played the major part, holds out the possibility of a radical democratization of the personal sphere. This book will appeal to a large general audience as well as being essential reading for students and professionals.

Participatory Conservation in Latin America, Africa, Asia and Europe

Jones & Bartlett Learning
 On January 20, 1949 US President Harry S. Truman officially opened the era of development. On that day, over one half of the people of the world were defined as underdeveloped and they have stayed that way ever since. This book explains the origins of development and underdevelopment and shows how poorly we understand these two terms. It offers a new vision for development, demystifying the statistics that international

organizations use to measure development and introducing the alternative concept of buen vivir: the state of living well. The authors argue that it is possible for everyone on the planet to live well, but only if we learn to live as communities rather than as individuals and to nurture our respective commons. Scholars and students of global development studies are well-aware that development is a difficult concept. This thought-provoking book offers them advice for the future of development studies and hope for the future of humankind.

Molecular Revolution in Brazil

 For a long time, the term 'ideology' was in disrepute, having become associated

with such unfashionable notions as fundamental truth and the eternal verities. The tide has turned, and recent years have seen a revival of interest in the questions that ideology poses to social and cultural theory, and to political practice. *Mapping Ideology* is a comprehensive reader covering the most important contemporary writing on the subject. Including Slavoj Žižek's study of the development of the concept from Marx to the present, assessments of the contributions of Lukács and the Frankfurt School by Terry Eagleton, Peter Dews and Seyla Benhabib, and essays by Adorno, Lacan and Althusser,

Mapping Ideology is an invaluable guide to the most dynamic field in cultural theory.

'Local governance have gained massive attention among scholars and practitioners during the past several years. Peter John's book fills a void in the literature by tracing the historical roots of local governance and by placing his findings in a comparative perspective' - Professor Jon Pierre, University of Gothenburg, Sweden

'Peter John has produced a fascinating and stimulating book in which he assesses current developments in urban politics and local government in Europe and suggests how these changes are leading to different patterns of sub-national territorial politics in the EU today. What he has to say is of important interest to all students of local government; comparative politics and of territorial politics more generally' - Michael Goldsmith, University of Salford
 'this book offers a fascinating comparative analysis... themes such as New Public Management, globalisation, regionalism and privatisation will be relevant to numerous courses in government,

politics, public administration and public policy' - West European Politics This text provides a comprehensive introduction to local government and urban politics in contemporary Western Europe. It is the first book to map and explain the change in local political systems and to place these in comparative context. The book introduces students to the traditional structures and institutions of local government and shows how these have been transformed in response to increased economic and political competition, new ideas, institutional reform and the Europeanization of public policy. At the book's core is the perceived transition

from local government to local governance. The book traces this key development thematically across a wide range of West European states including: Belgium, France, Greece, Italy, Germany, the Netherlands, Norway, Portugal, Spain and the United Kingdom.

Sex and Gender in Modern Mexican Fiction
Temple University Press

Transhumance is a form of pastoralism that has been practised around the world since animals were first domesticated. Such seasonal movements have formed an important aspect of many European farming systems for several thousand years, although they have declined

markedly since the nineteenth century. Ethnographers and geographers have long been involved in recording transhumant practices, and in the last two decades archaeologists have started to add a new material dimension to the subject. This volume brings together recent advances in the study of European transhumance during historical times, from Sweden to Spain, Romania to Ireland, and beyond that even Newfoundland. While the focus is on the archaeology of seasonal sites used by shepherds and cowherds, the contributions exhibit a high degree of interdisciplinarity. Documentary, cartographic, ethnographic and

palaeoecological evidence all play a part in the examination of seasonal movement and settlement in medieval and post-medieval landscapes. Notwithstanding the obvious diversity across Europe in terms of livestock, distances travelled and socio-economic context, an extended introduction to the volume shows that cross-cutting themes are now emerging, including mobility, gendered herding, collective land-use, the agency of non-elite people and competition for grazing and markets. The book will appeal not only to archaeologists, but to historians, geographers, ethnographers, palaeoecologists and anyone interested in rural lifeways across

Europe. Springer Science & Business Media
An interdisciplinary text on the world's savannas, covering the geography, ecology, economics and politics of savanna regions. Savannas are a distinct vegetation type, covering a third of the world's land surface area and supporting a fifth of the world's population. There has been a wide range of literature on the subject, but the majority of work has focused on the ecology or development of savanna areas, ignoring the wider interdisciplinary issues affecting contemporary savannas. World Savannas aims to buck this trend, providing students with an up-to-date and comprehensive

introduction to the global importance of savannas.

Plotting Women

Routledge

In this book, Arturo Santa-Cruz advances an understanding of power as a social relationship and applies it consistently to the economic realm in United States relations with other countries of the Western Hemisphere. Following the academic and popular debate on the ebb and flow of US hegemony, this work centers the analysis in a critical case for the exercise of US power through its economic statecraft: the Americas—its historical zone of influence. The rationale for the regional focus is methodological: if it can be shown that Washington's sway has

decreased in the area since the early 1970s, when the discussion about this matter started, it can be safely assumed that the same has occurred in other latitudes. The analysis focuses on three regions: North America, Central America and South America. Since each region contains countries that have at times maintained very different relationships with the United States, the findings contribute to a better understanding of the practice of US power in the sub-region in question, adding greater variability to the overall results. US Hegemony and the Americas: Power and Economic Statecraft in International Relations is an invaluable resource for students

and scholars interested in Latin American History and Politics, North American Regional Integration, International Relations, Economic Statecraft, Political Economy and Comparative Politics.

This book looks at the science, technology and innovation systems of Argentina, Brazil, Chile and Mexico, telling the stories of sixteen university research teams from different fields of knowledge, working in very different national contexts, but having in common the experience of producing high quality scientific knowledge in their fields, while being very active in transferring their

knowledge to society.

The Civilizing Process
Routledge

The relentless pursuit of economic growth is the defining characteristic of contemporary societies. Yet it benefits few and demands monstrous social and ecological sacrifice. Is there a viable alternative? How can we halt the endless quest to grow global production and consumption and instead secure socio-ecological conditions that support lives worth living for all? In this compelling book, leading experts Giorgos Kallis, Susan Paulson, Giacomo D'Alisa and Federico Demaria make the case for degrowth - living well with less, by living differently, prioritizing wellbeing,

equity and sustainability. Drawing on emerging initiatives and enduring traditions around the world, they advance a radical degrowth vision and outline policies to shape work and care, income and investment that avoid exploitative and unsustainable practices. Degrowth, they argue, can be achieved through transformative strategies that allow societies to slow down by design, not disaster. Essential reading for all concerned citizens, policy-makers, and students, this book will be an important contribution to one of the thorniest and most pressing debates of our era.

research on biological control! Completely updated for 2004, this new edition examines methods for making agricultural systems less susceptible to insect pests.

Containing new findings and reports of strategies, Biodiversity and Pest Management in Agroecosystems, Second Edition will show you how pests can be managed by enhancing beneficial biodiversity using agroecological diversification methods. Biodiversity and Pest Management in Agroecosystems, Second Edition provides you with an essential overview of the role of biodiversity in agriculture and then gets specific, with new and updated information on: the agroecology of pest
