Nearly every country that produces cars views the automobile industry as strategically important because of its direct economic significance and because it serves as a bellwether for innovation in employment conditions. In this book, industrial relations experts from eleven countries consider the state of the industry worldwide. They are particularly interested in assessing whether the loudly heralded model of lean production initiated by Toyota has become pervasive. The contributors focus on employment practices: the way work is organized, how workers and managers interact, the way worker representatives respond to lean production strategies, and the nature of the adaptation and innovation process itself.

In chassis development, the three  
aspects of safety, vehicle dynamics and  
ride comfort are at the top of the list of  
challenges to be faced. Addressing this  
triad of challenges becomes even more

complex when the chassis is required to  
interact with assistance systems and  
other systems for fully automated  
driving. What is more, new demands are  
created by the introduction of modern  
electric and electronic architectures. All  
these requirements must be met by the  
chassis, together with its subsystems,  
the steering, brakes, tires and wheels. At  
the same time, all physical relationships  
and interactions have to be taken into  
account.
