Research in veterinary science is critical for the health and well-being of animals, including humans. Food safety, emerging infectious diseases, the development of new therapies, and the possibility of bioterrorism are examples of issues addressed by veterinary science that have an impact on both human and animal health. However, there is a lack of scientists engaged in veterinary research. Too few veterinarians pursue research careers, and there is a shortage of facilities and funding for conducting research. This report identifies questions and issues that veterinary research can help to address, and discusses the scientific expertise and infrastructure needed to meet the most critical research needs. The report finds that there is an urgent need to provide adequate resources for investigators, training programs, and facilities involved in veterinary research.

As one of the world's most popular cultural activities, wild animal collections have been attracting visitors for 5,000 years. Under the direction of Vernon N. Kisling, an expert in zoo history, an international team of authors has compiled the first comprehensive, global history of animal collections, menageries, zoos, and aquariums. Zoo and Aquarium History: Ancient Animal Collections to Zoological Gardens documents the continuum of efforts in maintaining wild animal collections from ancient civilizations through today. Although historical research on zoos and aquariums is still at a rudimentary stage, this book pulls together regional information along with the cultural aspects of each region to provide a foundation upon which further research can be based. It presents a chronological listing of the world's zoos and aquariums and features many never-before published photographs. Sidebars present supplementary information on pertinent personalities, events, and wildlife conservation issues. As an overview of the current state of our knowledge, Zoo and Aquarium History: Ancient Animal Collections to Zoological Gardens provides an extensive, chronological introduction to the subject and highlights the published and archival resources for those who want to know more.
