This book presents a program of basic studies dealing with light and sound energy. The sources and nature of light and sound are presented along with various characteristics of each phenomenon. Topics include instruments that use and observe light and sound, materials that affect light and sound, and communication. Each of the twelve teaching units in this book is introduced by a color transparency (print books) or PowerPoint slide (eBooks) that emphasizes the basic concept of the unit and presents

questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

This book presents a collection of educational research and developmental efforts on the rapidly emerging use of infrared cameras and thermal imaging in science education. It provides an overview of infrared cameras in science education to date, and of the physics and technology of infrared imaging and thermography. It discusses different areas of application of infrared cameras in physics, chemistry and biology education, as well as empirical research on students' interaction with the technology. It ends with conclusions drawn from the contributions as a whole and a formulation of forward-looking comments. *Hearings Before Subcommittee No. 3 of the Committee on the Judiciary, House of Representatives, Eighty-ninth Congress, First Session on H.R. 4347 [and Others], Bills for the General Revision of the Copyright Law, Title 17 of the United States Code, and for Other Purposes* by Mocktime Publication

 Developed in partnership with NASA, Invisible Universe introduces students to some of the most awesome astronomical phenomena ever discovered. Students begin by studying the electromagnetic spectrum and come to understand how astronomers study the sky by detecting invisible light. After learning the types and properties of visible and invisible light, students are ready to investigate the massive and violent waves of radiation in space called gamma-ray bursts. Where do they come from-massive black holes, colliding galaxies, supernovas, nebulae &? As with all GEMS guides, Invisible Universe was extensively tested by teachers across the country. It comes with accessible background information for the teacher and clear, step-by-step directions. Alan Gould is author of the GEMS Teacher's Guide The Real Reasons for Seasons. Also
