A Critical Auto/Ethnography of Learning Spanish AuthorHouse

Benny Lewis, who speaks over ten languages—all self-taught—runs the largest language-learning blog in the world, *Fluent In 3 Months*. Lewis is a full-time "language hacker," someone who devotes all of his time to finding better, faster, and more efficient ways to learn languages. *Fluent in 3 Months: How Anyone at Any Age Can Learn to Speak Any Language from Anywhere in the World* is a new blueprint for fast language learning. Lewis argues that you don't need a great memory or "the language gene" to learn a language

quickly, and debunks a number of long-held beliefs, such as adults not being as good of language learners as children.

The book analyzes the complex relationship between languages in the bilingual mind with a focus on motion event typology and the acquisition of Spanish as a second language (L2). The author starts out by examining L1 patterns which are transferred to less complex L2 systems. The data discussed was elicited by German learners of Spanish. A similar transfer is observed when L1 is typologically and genetically close, as in the case of French and Italian learners of Spanish. Furthermore, the author clarifies the relevance of intra-typological differences within the same linguistic family, including important differences in the

lexicalization patterns of Italian with respect to French and Spanish. The findings contribute to our understanding of the field of motion event typology and thinking-for-speaking. The book demonstrates that conceptual transfer is present in different aspects of the motion lexicalization domain.

Interestingly, there are some challenging aspects both for speakers whose first language is typologically different and for those whose language is typologically close. The book offers suggestions on how these challenges in the restructuring of meaning in L2 can be addressed in language teaching. Specifically, pedagogical translation and mediation present promising pathways to the strengthening of semantic competences in the L2.

Principal Component Analysis John Wiley & Sons

Building upon the previous editions, this textbook is a first course in stochastic processes taken by undergraduate and graduate students (MS and PhD students from math, statistics, economics, computer science, engineering, and finance departments) who have had a course in probability theory. It covers Markov chains in discrete and continuous time, Poisson processes, renewal processes, martingales, and

option pricing. One can only learn a subject by seeing it in action, so there are a large number of examples and more than 300 carefully chosen exercises to deepen the reader's understanding. Drawing from teaching experience and student feedback, there are many new examples and problems with solutions that use TI-83 to eliminate the tedious details of solving linear equations by hand, and the collection of exercises is much improved, with many more biological examples. Originally included in previous editions, material too advanced for this first course in stochastic processes has been eliminated while treatment of other topics useful for applications has been expanded. In addition, the ordering of topics has been improved; for example, the difficult subject of martingales is delayed until its usefulness can be applied in the treatment of mathematical finance.

NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. “A brilliant and thoroughly modern guide to learning new languages.”—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn’t learn them in school—who does? Rather, he

learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he’s discovered. Starting with pronunciation, you’ll learn how to rewire your ears and turn foreign sounds into familiar sounds. You’ll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you’ll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you’ll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

The second edition features: a CD with all of the book's Amos, EQS, and LISREL programs and data sets; new chapters on importing data issues related to data editing and on how to report research; an updated introduction to matrix notation and programs that illustrate how to compute these calculations; many more computer program examples and chapter exercises; and increased coverage of factors that affect correlation, the 4-step approach to SEM and hypothesis testing, significance, power, and sample size issues. The new edition's expanded use of applications make this book ideal for advanced students and researchers in psychology, education, business, health care, political science, sociology, and biology.

A basic understanding of correlation is assumed and an understanding of the matrices used in SEM models is encouraged.

It is startling and it is shaming: in a country that prides itself on being among the most enlightened in the world, 25 million American adults cannot read the poison warnings on a can of pesticide, a letter from their child's teacher, or the front page of a newspaper. An additional 35 million read below the level needed to function successfully in our society. The United States ranks forty-ninth among 158 member nations of the UN in literacy, and wastes over \$100 billion annually as a result. The problem is not merely an embarrassment, it is a social and economic disaster. In *Illiterate America*, Jonathan Kozol, author of National Book Award-winning *Death at an Early Age*, addresses this national disgrace.

Combining hard statistics and heartrending stories, he describes the economic and the human costs of illiteracy. Kozol analyses and condemns previous government action—and inaction—and, in a passionate call for reform, he proposes a specific program to conquer illiteracy. One out of every three American adults cannot read this book—which is why everyone else must.

The unprecedented uncertainties marked by the pandemic and strategic conflicts between the key forces have redirected our attention to the importance of partnerships and engagements in international relations. India-EU dialogues through the annual summits have familiarized each other towards a greater understanding of one another's perspectives and interests. Their strategic engagement has broadened in the last few years to include climate change, energy, connectivity, migration, education, science and technology, and research and innovation. The growing convergence in Brussels and New Delhi's strategic interests open up new windows of opportunities for greater cooperation on diversified issues. Capturing the new momentum in India-EU relations, this book uncovers various issues and topics spanning across politics, education, and culture. Each chapter in this book analyzes the scope of the cooperation, the existing challenges that India and the EU encounter, and provides policy recommendations for the future.

Vols. for 1887-1946 include the preprint pages of the institute's Transactions. *How to Learn Any Language Fast and Never Forget It* Learning Express LLC 'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.
