Intervention Research

One key responsibility of product designers and UX practitioners is to conduct formal and informal

research to clarify design decisions and business needs. But there's often mystery around product research, with the feeling that you need to be a research Zen master to gather anything useful. Fact is, anyone can conduct product research. With this quick reference guide, you'll learn a common language and set of tools to help you carry out research in an informed and productive manner. This book contains four sections, including a brief introduction to UX

research, planning and preparation, facilitating research, and analysis and reporting. Each chapter includes a short exercise so you can quickly apply what you've learned. Learn what it takes to ask good research questions Know when to use quantitative and qualitative research methods Explore the logistics and details of coordinating a research session Use softer skills to make research seem natural to participants Learn tools and approaches to uncover

meaning in your raw data Communicate your findings with a framework and structure
Practical Research and Evaluation Springer Publishing Company
 Many very intelligent people don't like dealing with numbers. Similarly, many gifted scientists are not especially interested in studying people and their cultural behaviour. In this book, we argue that being interested in people and their cultures, and helping students and others to use numbers to pursue these interests,

are not mutually exclusive. Research methods are becoming an increasingly important requirement for students of all kinds. But many students, particularly those in the humanities, struggle with concepts drawn from the social sciences and find quantitative and statistical information inaccessible and daunting. Nonetheless, such concepts are found in nearly all areas of society, from market research and opinion polls to psychological studies of

human behaviour. This book aims to provide a simple guide to the process of conducting research in the humanities, with special reference to media and culture, from the planning stage, through the data gathering, to the analysis and interpretation of results: 'planning it', 'doing it' and 'understanding it'. The book aims to show how students' own choice of research topic can be refined into a manageable research question and how the most appropriate

methodologies can be applied. Each section draws on actual examples from research that the authors and their students have conducted. Topics covered include: choosing a research question and method; instrument design and pilot data; practical procedures; research with children; looking at statistics; and interpretation of results. Features: *Based on the authors' practical experience as researchers and teachers and is thus accessible, practical and 'how to'. *Includes

students' own work as examples.*Bridges the 'divide' between social science and humanities research methods and will therefore appeal to a broad range of students and teachers.

A Practical Guide
Routledge
The SAGE Handbook of Applied Social Research Methods, Second Edition provides students and researchers with the most comprehensive resource covering core methods, research designs, and data collection, management, and analysis issues. This thoroughly revised edition continues to place critical emphasis on finding the tools that best fit the research question given the constraints of deadlines, budget, and

available staff. Each chapter offers key guidance on how to make intelligent and conscious tradeoffs so that one can refine and hone the research question as new knowledge is gained, unanticipated obstacles are encountered, or contextual shifts take place - all key elements in the iterative nature of applied research. Each chapter has been enhanced pedagogically to include more step-by-step procedures, specific, rich yet practical examples from various

settings to illustrate the method, parameters to define when the method is most appropriate and when it is not appropriate, and greater use of visual aids (graphs, models, tip boxes) to provide teaching and learning tools. - twenty core chapters written by research experts that cover major methods and data analysis issues across the social and behavioral sciences, education, and management; - emphasis on applying research techniques, particularly in

"real-world" settings in which there are various data, money, time, and political constraints; - new chapters on mixed methods, qualitative comparative analysis, concept mapping, and internet data collection; - a newly developed section that serves as a guide for students who are navigating through the book and attempting to translate the chapters into action; - a new Instructor's Resources CD, with relevant journal articles, test questions, and exercises to aid the

instructor in developing appropriate course materials.

The Dissertation Journey
Routledge

Doing Research in Urban and Regional Planning provides a basic introduction to methodology and methods in planning research. It brings together the methods most commonly used in planning, explaining their key applications and basic protocols. It addresses the unique needs of planners

by dealing with concerns which cut across the social, economic, and physical sciences, showing readers how to mobilise fresh combinations of methods, theoretical frameworks and techniques to address the complex needs of urban and regional development. It includes illustrative case studies throughout to help planning students see how methods can be operationalised on the ground and connect research with urban and regional planning practice

to build foundations for action. The book pays attention to contemporary trends – such as the growth in information technology, and general shifts in urban and environmental governance – that are affecting the practicalities and protocols of doing planning research. Doing Research in Urban and Regional Planning also encourages ethical reflection and discusses the ethical issues specific to planning research. Each chapter begins with a chapter outline with

learning outcomes and concludes with take-home messages and suggested further readings. It also suggests a range of learning activities and discussion points for each method.
