The clock is relentlessly ticking! Our world teeters on a knife-edge between a peaceful and prosperous future for all, and a dark winter of death and destruction that threatens to smother the light of civilization. Within 30 years, in the 2030 decade, six powerful 'drivers' will converge with unprecedented force in a statistical spike that could tear humanity apart and plunge the world into a new Dark Age. Depleted fuel supplies, massive population growth, poverty, global climate change, famine, growing water shortages and international lawlessness are on a crash course with potentially catastrophic consequences. In the face of both doomsaying and denial over the state of our world, Colin Mason cuts through the rhetoric and reams of conflicting data to muster the evidence to illustrate a broad picture of the world as it is, and our possible futures. Ultimately his message is clear; we must act decisively, collectively and immediately to alter the trajectory of humanity away from catastrophe. Offering over 100 priorities for immediate action, The 2030 Spike serves as a guidebook for humanity through the treacherous minefields and wastelands ahead to a bright, peaceful and prosperous future in which all humans have the opportunity to thrive and build a better civilization. This book is powerful and essential reading for all people concerned with the future of humanity and planet earth.

This book outlines the so called 'contemporary Asian matriarchate'. In the twentieth century, six women have held the office of prime minister in South Asia. The pioneers were Sirimavo Bandaranaike of Sri Lanka-the world's first female prime minister-and Indira Gandhi, who headed the government of India. They were followed by Benazir Bhutto, the Prime Minister of Pakistan, Sheikh Hasina Wajed and Begum Khaleda Zia, who held same position in Bangladesh, and Chandrika Kumaratunga, the Sri Lankan President. Why should countries so long associated with patriarchy and the subordination of women be the focus for so many politically prominent females? The analysts attribute it simply to inheritance as each of these women was a widow or daughter of a slain male national leader. Women have tended to move into top position of power under the most dramatic circumstances-as a result of military coups, attempted murder, and assassination. This book will try to unravel the question of how these six women have managed to take power and how they have been able to exploit to their benefit the traditions of sexuality, motherhood, and kinship in South Asia. *Gender, Kinship, and Power in South Asia* Mobile Library

A pass-along companion to *Anxious for Nothing* that features an 11-week plan to overcome anxiety. According to one research program, anxiety-related issues are the number one mental health problem among women and are second only to alcohol and drug abuse among men. Stress-related ailments cost the nation \$300 billion every year in medical bills and lost productivity. And use of sedative drugs like Xanax and Valium have skyrocketed in the last 15 years. Even students are feeling it. One psychologist reports that the average high school kid today has the same level of anxiety as the average psychiatric patient in the early 1950s. Chances are, you or someone you know seriously struggles with anxiety. Max writes, "The news about our anxiety is enough to make us anxious." He knows what it feels like to be overcome by the worries and fear of life, which is why he is dedicated to helping millions of readers take back control of their minds and, as a result, their lives. This 64-page booklet features practical steps from Max Lucado to help readers

overcome anxiety. Eleven weekly reminders in all, each segment includes a Scripture verse for meditation, and a prayer to reframe anxious thoughts. This booklet includes a passage from the book, *Anxious for Nothing*, by New York Times bestselling author Max Lucado. The small trim and low price point make this booklet easy to share with friends and family who are struggling with anxiety and need a fresh perspective on how to face it. Stop letting anxiety rule the day. Join Max on the journey to true freedom and experience more joy, clarity, physical renewal, and contentment by the power of the Holy Spirit. Anxiety comes with life. But it doesn't have to dominate your life.

This comprehensive volume provides teachers, researchers and education professionals with cutting edge knowledge developed in the last decades by the educational, behavioural and neurosciences, integrating cognitive, developmental and socioeconomic approaches to deal with the problems children face in learning mathematics. The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it's time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the *International Handbook of Mathematical Learning Difficulties* an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

The *God Delusion* caused a sensation when it was published in 2006. Within

weeks it became the most hotly debated topic, with Dawkins himself branded as either saint or sinner for presenting his hard-hitting, impassioned rebuttal of religion of all types. His argument could hardly be more topical. While Europe is becoming increasingly secularized, the rise of religious fundamentalism, whether in the Middle East or Middle America, is dramatically and dangerously dividing opinion around the world. In America, and elsewhere, a vigorous dispute between 'intelligent design' and Darwinism is seriously undermining and restricting the teaching of science. In many countries religious dogma from medieval times still serves to abuse basic human rights such as women's and gay rights. And all from a belief in a God whose existence lacks evidence of any kind. Dawkins attacks God in all his forms. He eviscerates the major arguments for religion and demonstrates the supreme improbability of a supreme being. He shows how religion fuels war, foments bigotry and abuses children. *The God Delusion* is a brilliantly argued, fascinating polemic that will be required reading for anyone interested in this most emotional and important subject.

Oxford University Press, USA  
Despite three decades of scientists' warnings and environmentalists' best efforts, the political will and public

engagement necessary to fuel robust action on global climate change remain in short supply. Katharine K. Wilkinson shows that, contrary to popular expectations, faith-based efforts are emerging and strengthening to address this problem. In the US, perhaps none is more significant than evangelical climate care. Drawing on extensive focus group and textual research and interviews, *Between God & Green* explores the phenomenon of climate care, from its historical roots and theological grounding to its visionary leaders and advocacy initiatives. Wilkinson examines the movement's reception within the broader evangelical community, from pew to pulpit. She shows that by engaging with climate change as a matter of private faith and public life, leaders of the movement challenge traditional boundaries of the evangelical agenda, partisan politics, and established alliances and hostilities. These leaders view sea-level rise as a moral calamity, lobby for legislation written on both sides of the aisle, and partner with atheist scientists. Wilkinson reveals how evangelical environmentalists are reshaping not only the landscape of American climate action, but the contours of their own religious community. Though the movement faces complex challenges, climate care leaders continue to leverage evangelicalism's size, dominance, cultural position, ethical resources, and mechanisms of communication to further their cause to bridge God and green.

*Essential Mathematics for Cambridge Secondary 1 Stage 9* Thomas Nelson  
New Syllabus Mathematics (NSM) is a series of textbooks specially designed to provide valuable learning experiences to engage the hearts and minds of students sitting for the GCE O-level examination in Mathematics. Included in the textbooks are Investigation, Class Discussion, Thinking Time, Journal Writing, Performance Task and Problems in Real-World Contexts to support the teaching

and learning of Mathematics. Every chapter begins with a chapter opener which motivates students in learning the topic. Interesting stories about Mathematicians, real-life examples and applications are used to arouse students' interest and curiosity so that they can appreciate the beauty of Mathematics in their surroundings. The use of ICT helps students to visualise and manipulate mathematical objects more easily, thus making the learning of Mathematics more interactive. Ready-to-use interactive ICT templates are available at <http://www.shinglee.com.sg/StudentResources/SaratBookDistributors>  
Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. *Helping Children Learn Mathematics* provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

Loyal Americans marched off to war in 1861 not to conquer the South but to liberate it. In *Armies of Deliverance*, Elizabeth Varon offers both a sweeping narrative of the Civil War and a bold new interpretation of Union and Confederate war aims. Lincoln's Union coalition sought to deliver the South from slaveholder tyranny and deliver to it the blessings of modern civilization. Over the course of the war, supporters of black freedom built the case that slavery was the obstacle to national reunion and that emancipation would secure military victory and benefit Northern and Southern whites alike. To sustain their morale, Northerners played up evidence of white Southern Unionism, of antislavery progress in the slaveholding border states, and of disaffection among Confederates. But the Union's emphasis on Southern deliverance served, ironically, not only to galvanize loyal Americans but also to galvanize disloyal ones.

Confederates, fighting to establish an independent slaveholding republic, scorned the Northern promise of liberation and argued that the emancipation of blacks was synonymous with the subjugation of the white South.

*Human Rights and the Image of God* is a critical analysis of the relationship between Christian theology and human rights. Written in a lucid and accessible style, this is an excellent resource for students and academics interested in theology, human rights and the historical background to contemporary ethical debates. The development of the idea of human rights in western society and politics is closely followed, as are the conflicts and debates associated with the idea of human rights. The author surveys the ways in which this development has been closely related to the development of a just war theory.
