There are at least four reasons why a sleep clinician should be familiar with rating scales that evaluate different facets of sleep. First, the use of scales facilitates a quick and accurate assessment of a complex clinical problem. In three or four minutes (the time to review ten standard scales), a clinician can come to a broad understanding of the patient in question. For example, a selection of scales might indicate that an individual is sleepy but not fatigued; lacking alertness with no insomnia; presenting with no symptoms of narcolepsy or restless legs but showing clear features of apnea; exhibiting depression and a history of significant alcohol problems. This information can be used to direct the consultation to those issues perceived as most relevant, and can even provide a springboard for explaining the benefits of certain treatment approaches or the potential corollaries of allowing the status quo to continue. Second, rating scales can provide a clinician with an enhanced vocabulary or language, improving his or her understanding of

each patient. In the case of the sleep specialist, a scale can help him to distinguish fatigue from sleepiness in a patient, or elucidate the differences between sleepiness and alertness (which is not merely the inverse of the former). Sleep scales are developed by researchers and clinicians who have spent years in their field, carefully honing their preferred methods for assessing certain brain states or characteristic features of a condition. Thus, scales provide clinicians with a repertoire of questions, allowing them to draw upon the extensive experience of their colleagues when attempting to tease apart nuanced problems. Third, some scales are helpful for tracking a patient's progress. A particular patient may not remember how alert he felt on a series of different stimulant medications. Scale assessments administered periodically over the course of treatment provide an objective record of the intervention, allowing the clinician to examine and possibly reassess her approach to the patient. Finally, for individuals conducting a double-blind crossover trial or a straightforward clinical practice audit, those who are interested in research will find that their own clinics become a source of great discovery. Scales provide standardized measures that allow colleagues across

cities and countries to coordinate their practices. They enable the replication of previous studies and facilitate the organization and dissemination of new research in a way that is accessible and rapid. As the emphasis placed on evidence-based care grows, a clinician's ability to assess his or her own practice and its relation to the wider medical community becomes invaluable. Scales make this kind of standardization possible, just as they enable the research efforts that help to formulate those standards. The majority of Rating Scales in Sleep and Sleep Disorders:100 Scales for Clinical Practice is devoted to briefly discussing individual scales. When possible, an example of the scale is provided so that readers may gain a sense of the instrument's content. Groundbreaking and the first of its kind to conceptualize and organize the essential scales used in sleep medicine, Rating Scales in Sleep and Sleep Disorders:100 Scales for Clinical Practice is an invaluable resource for all clinicians and researchers interested in sleep disorders.

501 Synonyms and Antonym Questions is designed to help students prepare for the verbal sections of most assessment and entrance exams. The book increases a student's vocabulary and refines their knowledge of words, bringing about higher standardized test scores and more effective verbal and written communication. Questions in this book prepare students for the synonym and antonym problems found on most standardized tests-including high school entrance exams, the SAT, civil service exams, and the GRE. The book increases in difficulty as students move through

each exercise. All answers are explained, featuring short definitions and terms that clarify word meanings and their opposites for effective studying and positive reinforcement.

The present ecological mutation has organized the whole political landscape for the last thirty years. This could explain the deadly cocktail of exploding inequalities, massive deregulation, and conversion of the dream of globalization into a nightmare for most people. What holds these three phenomena together is the conviction, shared by some powerful people, that the ecological threat is real and that the only way for them to survive is to abandon any pretense at sharing a common future with the rest of the world. Hence their flight offshore and their massive investment in climate change denial. The Left has been slow to turn its attention to this new situation. It is still organized along an axis that goes from investment in local values to the hope of globalization and just at the time when, everywhere, people dissatisfied with the ideal of modernity are turning back to the protection of national or even ethnic borders. This is why it is urgent to shift sideways and to define politics as what

leads toward the Earth and not toward the global or the national. Belonging to a territory is the phenomenon most in need of rethinking and careful redescription; learning new ways to inhabit the Earth is our biggest challenge. Bringing us down to earth is the task of politics today.

Literature teaching remains central to the teaching of English around the world. This edited text brings together expert global figures under the banner of the International Federation for the Teaching of English (IFTE). The book captures a state-of-the-art snapshot of leading trends in current literature teaching, as well as detailing predicted trends for the future. The expert scholar and leading teacher contributors, coming from a wide range of countries with fascinatingly diverse approaches to literature teaching, cover a range of central and fundamental topics: literature and diversity; digital literatures; pedagogy and reader response; mother tongues; the business of reading; publishers, adolescent fiction and censorship; assessing responses to literature; the changing definitions of literature and multimodal texts. The collection reviews the consistently important place of literature in the education of young people and provides international evidence of its enduring value and contribution to education, resisting the functionalist and narrowly nationalist perspectives of misguided government authorities. *International Perspectives on the Teaching of Literature in Schools* will be of value to researchers, PhD students, literature scholars, practitioners, teacher educators, teachers and all those in the extensive academic community

interested in English and literacy around the world.

This graduate-level textbook is the first pedagogical synthesis of the field of topological insulators and superconductors, one of the most exciting areas of research in condensed matter physics. Presenting the latest developments, while providing all the calculations necessary for a self-contained and complete description of the discipline, it is ideal for graduate students and researchers preparing to work in this area, and it will be an essential reference both within and outside the classroom. The book begins with simple concepts such as Berry phases, Dirac fermions, Hall conductance and its link to topology, and the Hofstadter problem of lattice electrons in a magnetic field. It moves on to explain topological phases of matter such as Chern insulators, two- and three-dimensional topological insulators, and Majorana p-wave wires.

Additionally, the book covers zero modes on vortices in topological superconductors, time-reversal topological superconductors, and topological responses/field theory and topological indices. The book also analyzes recent topics in condensed matter theory and concludes by surveying active subfields of research such as insulators with point-group symmetries and the stability of topological semimetals. Problems at the end of each chapter offer opportunities to test knowledge and engage with frontier research issues. *Topological Insulators and Topological Superconductors* will provide graduate students and researchers with the physical understanding and mathematical tools needed to embark on research in this rapidly evolving field.

Student academic writing is at the heart of teaching and learning in higher education. Students are assessed largely by what they write, and need to learn both general academic conventions as well as disciplinary writing requirements in order to be successful in higher education. *Teaching Academic Writing* is a 'toolkit' designed to help higher education lecturers and tutors teach writing to their students. Containing a range of diverse teaching strategies, the book offers both practical activities to help students develop their writing abilities and guidelines to help lecturers and tutors think in more depth about the assessment tasks they set and the feedback they give to students. The authors explore a wide variety of text types, from essays and reflective diaries to research projects and laboratory reports. The book draws on recent research in the fields of academic literacy, second language learning, and

linguistics. It is grounded in recent developments such as the increasing diversity of the student body, the use of the Internet, electronic tuition, and issues related to distance learning in an era of increasing globalisation. Written by experienced teachers of writing, language, and linguistics, *Teaching Academic Writing* will be of interest to anyone involved in teaching academic writing in higher education.

The Highland Summer Writing Conference (HSC), held each summer along the banks of the ancient New River at Radford University's Selu Conservancy, brings together and inspires writers as they participate in the communal art of creating and sharing. Over the years, many prestigious Appalachian authors have taught workshops to like-minded students, many of whom became published authors in their own right. This book, a celebration of the HSC, is a collection of reflective essays, poetry, fiction, and non-fiction contributed by 41 authors and student-authors who have taken part in the conference over a span of 43 years.

Science need not be dull and bogged down by jargon, as Richard Dawkins proves in this entertaining look at evolution. The themes he takes up are the concepts of altruistic and selfish behaviour; the genetical definition of selfish interest; the evolution of aggressive behaviour; kinship theory; sex ratio theory; reciprocal altruism; deceit; and the natural selection of sex differences. 'Should be read, can be read by almost anyone. It describes with great skill a new face of the theory of evolution.' W.D. Hamilton, *Science*

What actions are justified when the fate of a nation hangs in the balance, and who can see the best path ahead? Julius Caesar has led Rome successfully in the war against Pompey and returns celebrated and beloved by the people. Yet in the senate fears intensify that his power may become supreme and threaten the welfare of the republic. A plot for his murder is hatched by Caius Cassius who persuades Marcus Brutus to support him. Though Brutus has doubts, he joins Cassius and helps organize a group of conspirators that assassinate Caesar on the Ides of March. But, what is the cost to a nation now erupting into civil war? A fascinating study of political power, the consequences of actions, the meaning of loyalty and the false motives that guide the actions of men, Julius Caesar is action packed theater at its finest.
