*Principles and Practice of Geriatric Surgery*

African Amer Images

There are more similarities than differences between how artists and scientists work. Both ask countless questions. Both search in earnest for answers. Both are dedicated to reaching the best results. Not so different from today's trainers, are they? Elaine Biech, one of the most highly regarded names in talent development, has set out to identify the perfect blend of content mastery and audience insight. The result is this highly informative book. The Art and Science of Training presents the science for learning and development, but it also emphasizes that training success lies in knowing what to do when things don't go as planned. Discover how top facilitators always put learners first, even when faced with exceptions to the rule—the unwilling learner, the uninformed supervisor, the inappropriate delivery medium, or the unmanageable performance challenge. And learn why you must understand people, not only content, to ensure consistently exceptional learning experiences. Science is both a body of knowledge and a process. Art is the expression of creativity and imagination. Where they intersect is the best way to help others learn and grow.

*The Historical Records of North Carolina ...*

Springer Science & Business Media

The author has written this book entitled 'Afrocentricity' especially for those Africans still in a confused state in order to show them the way to peace. Further he indicates that the book has created its own supporters and detractors and has also been at the core of intense debates about the de-colonizing of the African mind, the dismantling of America, and the destabilizing of the Eurocentric hegemony. This book is not meant to be unread, unremarked upon, or unheard. Afrocentrists have multiplied in the theaters, universities, unions, political organizations, schools, and corporations. The challenge to the white racial hierarchy has been intense and severe; there can be no hiding

from the agency of awakened Africans. In the next few decades it is anticipated that a mighty revolution of values, symbols, and actions might bring about a more equitable society. This revolution for justice and liberty shall be led by the aroused black nation committed to a world of peace.

*Developing Minds* American Society for Training and Development

If you want to help people learn from activities, exercises or experiences, this book is for you. This book fills a gap; it is the gap between doing an activity and learning from it. Plenty of books describe activities that are good for icebreaking, for team-building, for project management or for cross-cultural understanding, etc. A few of these books do give advice about reviewing (or debriefing) the activities, and 90% of the times it reads: "Here are some questions you can ask ...". How's that for boring and/or limiting? The result of such advice is that reviews are often dull and they dwell on what went wrong. When reading, they give off a feeling of discomfort. But why is that? Well, one of the reasons is because the same people speak up all the time. And that bores and might even annoy the rest of the participants. Thus, reviewing gets a bad name and people just want the review to finish as quickly as possible so that they can get on with the next activity. This is a rare book for two reasons: It is about reviewing (How many books have you come across on this subject?) It is about reviewing actively. (Which makes it not just rare, but unique.) With the help of this book, you can make reviews at least as engaging as the activities you are reviewing. No more discomfort. No more unwanted silences. No more superficial reviews. Just engaging and practical ways to help people learn from experience! How does that sound for a change?

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives--cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis).
