“George’s rip-snorting Southern-fried paranormal debut delivers hilarious one-liners, sexy alpha males, and plenty of mayhem.” —Publishers Weekly A warrior, a demon, and the girl next door . . . Addy Corwin is a florist with an attitude. A bad attitude, or so her mama says, ‘cause she’s not looking for a man. Mama’s wrong. Addy has looked. There’s just not much to choose from in Hannah, her small Alabama hometown. Until Brand Dalvahni shows up, a supernaturally sexy, breathtakingly well-built hunk of a warrior from—well, not from around here, that’s for sure. Mama thinks he might be European or maybe even a Yankee. Brand says he’s from another dimension. Addy couldn’t care less where he’s from. He’s gorgeous. Serious muscles. Disturbing green eyes. Brand really gets her going. Too bad he’s a whack job. Says he’s come to rescue her from a demon. Puh-lease. But right after Brand shows up, strange things start to happen. Dogs talk and reanimated corpses stalk the quiet streets of Hannah. Her mortal enemy Meredith, otherwise known as the Death Starr, breaks out in a severe and inexplicable case of butt boils. Addy might not

know what's going on, but she definitely wants a certain sexy demon hunter by her side when it all goes down . . . "A not-to-be-missed Southern-fried, bawdy, hilarious romp." —Beverly Barton, New York Times–bestselling author "A demonically wicked good time." —Angie Fox, New York Times–bestselling author "A steel magnolia meets Conan the Barbarian in one of the best books I have ever read . . . Amazingly hilarious." —Fresh Fiction

Engine production for the typical car manufactured today is a study in mass production. Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import, the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more

horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maxi

Life is full of challenges- no matter age, gender, religion, ethnicity, or occupation. Some days can be wonderful and rich with blue skies with rays of yellow, and in a single moment, dark

clouds and stormy winds push you to the brink of despair! In those moments, we often find ourselves discouraged and in need of words that speak to the heart of the matter; and it is there that we get a glimpse of the smallest rays of hope, waiting to be put together like pieces of a fragmented puzzle. The question for us then becomes, wherein does this source of enlightenment stem? In this big little book, these simply penned words, steeped in hidden pathways, can have the ability to meet you where you are and change life's trajectory. No matter how deep the pit appears or how hot the fire burns, take comfort in knowing that this collection: Poetry Thoughts & Meditations for the Soul, are writings inspired just for you. One of the most powerful gifts we have is that of self-expression. So understanding how to build a practical and healthy sense of self does not end when we face adversity; it merely begins when we overcome it. Here a little, there a little, step by step! The creativity He inspires can become an integral part of our lives when we learn how to saturate ourselves in the Son-light. Your journey in the wilderness has been a tedious one. Won't you allow a force higher than yourself to sustain and refresh your soul? Come, eat, and drink from the fountain. I hope that within these pages, you find a breadth of depth in the infinite source you have never known before. On that foundation, that source will unleash within your inner self unconditional Love, Joy, Peace, and the Hope of a Lasting Legacy!

Multi-time author and well-regarded performance engine builder/designer John Baechtel has assembled the relevant mathematics and packaged it all together in a book designed for automotive enthusiasts. This book walks readers through the

complete engine, showcasing the methodology required to define each specific parameter, and how to translate the engineering math to hard measurements reflected in various engine parts. Designing the engine to work as a system of related components is no small task, but the ease with which Baechtel escorts the reader through the process makes this book perfect for both the budding engine enthusiast and the professional builder.

To most people, cars are just appliances to be disposed of when they rust, become unreliable, or are outgrown. But to car people, it's different. Cars are like photographs that occupy physical space. They hold aromas that trigger memories, and remind us of who we once were. In addition, to some people, the relationship with the car itself is a real thing. Many enthusiasts pine for the cars of their youth, regret that they ever let them go, and yearn and search for them the way people do with old lovers, hoping to find them and rekindle that old spark. In *Resurrecting Bertha*, Rob Siegel assures you that this is normal (well, as normal as anything is with car people), and embarks on this journey himself. Writing in his trademark Hack Mechanic voice that's enthralled readers for 35 years, Rob describes his original eight-year relationship with his highly-modified 1975 BMW 2002 "Bertha," selling the car to a dear friend, its 26 years of storage, and buying it back in a weak whisky-soaked moment only to experience the "oh dear God what did I just do" regret when he

raises the long-closed garage door and comes face-to-face with the badly deteriorated car. The book details the steps Rob went through to get the car running, then driving, then sufficiently sorted to make a 2000-mile drive, and how the reconnection with the car was so much deeper than he expected. *Resurrecting Bertha* is about more than just the nuts and bolts; it's about deciding what's important, the joy of doing good, and how, if you do it right, not only can you go home again, but you can do so in the same car.

The aftermath of loss, especially loss by suicide, is traumatic, confusing, and exhausting. The author's own experience with loss and her work with thousands of other survivors inspired her to create this book. Rebuilding a new life is not easy, but healing happens from the very beginning in almost unnoticed moments. The struggle becomes how to move forward in a healthy way. Rather than telling someone to "get over it" or "move on," the author recommends compassion and specific steps to finding support and working through grief. Each person is unique; each relationship is unique. And each of us must find our way on the grief journey on our own individual timetable. What helps most is knowing we don't have to do this alone.

Felting is an ancient craft that enjoys an endless variety of forms and uses. Felt Fashion captures the art and sophistication that is possible with handmade felt, while keeping it simple and attainable for anyone to master. Whether it's a collar or an entire dress, each project is irresistible and brings felting to an entirely new level. The author demonstrates several basic felting techniques including: basic wet felting, needle felting, nuno, and punch needle felting. For the more advanced fiber artist and sewer, she provides patterns and instructions for original clothing designs including vests, jackets, and skirts. Felt Fashion is a standout from other felting books for its scope, originality, and its distinct ties to couture.

This book examines both the potential application of electronic nose technology, and the current state of development of chemical sensors for the detection of vapours from explosives,

such as those used in landmines. The two fields have developed, somewhat in parallel, over the past decade and so one of the purposes of this workshop, on which the book is based, was to bring together scientists from the two fields in order to challenge the two communities and, mutually, stimulate both fields. It begins with a review of the basic principles of an electronic nose and explores possible ways in which the detection limit of conventional electronic nose technology can be reduced to the level required for the trace levels observed for many explosive materials. Next are reviews of the use of several different types of solid-state chemical sensors: polymer-based sensors, i.e. chemiluminescent, fluorescent and optical, to detect explosive materials; metal oxide semiconducting resistive sensors; and

then electrochemical sensors. Next, different pattern recognition techniques are presented to enhance the performance of chemical sensors. Then biological systems are considered as a possible blue-print for chemical sensing. The biology can be employed either to understand the way insects locate odorant sources, or to understand the signal processing neural pathways. Next is a discussion of some of the new types of electronic noses; namely, a fast GC column with a SAW detector and a micromechanical sensor. Finally, the important issues of sampling technologies and the design of the microfluidic systems are considered. In particular, the use of pre-concentrators and solid phase micro extractors to boost the vapour concentration before it is introduced to the chemical sensor or electronic nose.
