A Coloring Book for Botanical-Loving Adults for Creativity, Relaxation, and Meditation Penguin Wes Anderson's Fantastic Mr. Fox meets Richard Scarry's Best Word Book Ever in this stylish picture book about a quest for a rare and mysterious plant. Fox loves nature. There's nothing he enjoys more than reading about and picking flowers. One evening, he comes across a rare specimen in his old botany book -- the golden glow, a plant from the Wellhidden family, found only in the mountains . . . a plant that has yet to be described. Fascinated, Fox decides to set off on a quest in search of the mysterious golden glow. He packs his knapsack, a map, a compass, a flashlight, a sleeping bag and other items for his hike. Along the way, Fox observes many different kinds of trees and plants. He also encounters woodland friends who help him make it to the summit of the mountain. But when Fox eventually stumbles upon the object of his quest, he makes a surprising decision. With spreads of educational content interspersed throughout, The Golden Glow is a charming story that details the simple pleasures of a nature hike and celebrates observing the beauty of nature.

Now available in an affordable softcover edition, this classic in Springer's acclaimed Virtual Laboratory series is the first comprehensive account of the computer simulation of plant development. 150 illustrations, one third of them in colour, vividly demonstrate the spectacular results of the algorithms used to model plant shapes and developmental processes. The latest in computer-generated images allow us to look at plants growing, self-replicating, responding to external factors and even mutating, without becoming entangled in the underlying mathematical formulae involved. The authors place particular emphasis on Lindenmayer systems - a notion conceived by one of the authors, Aristid Lindenmayer, and internationally recognised for its exceptional elegance in modelling biological phenomena. Nonetheless, the two authors take great care to present a survey of alternative methods for plant modelling.

Living immersed in landscapes of great natural beauty, Tuscans have always harboured a deep love of flowers and gardens. During the Renaissance, in intellectual circles this propensity developed naturally into an interest in horticulture and the botanical sciences, subjects that would co-exist in perfect harmony with the Medici family's love of the arts.

In 2013 designer and illustrator Michelle Mason co-founded Mason & Painter, a vintage emporium in east London on a street famed for its Sunday flower market. Many of the vintage items sold in the shop are lovingly restored to sell as containers for flowers and plants. Michelle's inspiration for this book is the wide variety of seasonal plants and flowers available right outside her shop. Using salvage and reclaimed objects as props and backdrops, Flower Market: Botanical Style at Home is brimming with texture, color, pattern and exciting and inspiring ways to group and display flowers, plants and succulents. Michelle draws on her design experience, playing with shapes, colors and textures to create combinations that work well together, blending layers of hue and pattern, to show how to make the most of fresh flower purchases and bring botanical style into the home. *Botanical Coloring Book for Adults* Cambridge University Press

An Introduction to Botany Springer Science & Business Media

The book that helped make Michael Pollan, the New York Times bestselling author of *How to*

Change Your Mind, *Cooked* and *The Omnivore's Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers' genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind's most basic yearnings. And just as we've benefited from these plants, we have also done well by them. So who is really domesticating whom?
