Over the past fifty years, many thousands of conflict simulations have been published that bring the dynamics of past and possible future wars to life. In this new work, Philip Sabin explores the theory and practice of conflict simulation as a topic in its own right, based on his thirty years of experience in designing wargames and using them in teaching. *Simulating War* sets conflict simulation in its proper context alongside such techniques as game theory and operational analysis. It explains in detail the analytical and modelling techniques involved, and it teaches you how to design your own simulations of conflicts of your choice. The book provides eight simple illustrative simulations of specific historical conflicts, complete with rules, maps and counters. *Simulating War* is essential reading for all recreational or professional simulation gamers, and for anyone who is interested in modelling war, from teachers and students to military officers.

My name is Timberly Day. I don't drink, but I do know things. I know the heart beats over 100,000 times per day. I know for every one second, lightning strikes the Earth 100 times. I also know that Jaxon King—the bloody tosser!—is a muddler. A manipulator. A liar. A con, a thief...and a closet nerd. He's as beautiful as innocence, as harmless as a feather. Except, it's all an illusion. I see him and I see lies. I smell him and I taste deceit. And still—fool that I am—I rush in. His eyes are like ice. His tongue is like fire. His lies are white, but his touch is red hot. I had the chance to run. I didn't. Now, I am a part of the game. And the only way to win...is to give in.

Free Hostage Entangled: Amara Unplugging the Classroom: Teaching with Technologies to Promote Students' Lifelong Learning provides techniques to help teaching and learning in an age where technology untethers instruction from the classroom, from semester seat-time, and from a single source of expertise. The book brings together researchers and practitioners from

diverse academic fields, including library perspectives, and presents interdisciplinary discussions from both theoretical and applied areas. It is unique in its goal of bringing educators and librarians together to explore the challenges that are faced by students and faculty in any time, any place, any path, and any pace learning. In spite of the fact that the mobile revolution has definitively arrived, students and faculty alike aren't ready to make the leap to mobile learning. The pressures of technological advances, along with the changing nature of learning, will demand increasingly profound changes in education. Researchers have begun to address this issue, but the revolution in mobile communication has not been accompanied by a concomitant growth in pedagogical resources for educators and students. More importantly, such growth needs to be under-girded by sound learning theories and examples of best practice. Provides a hands-on resource useful to both novices and experts for technology-enabled teaching and learning Gives both discipline-specific and cross-disciplinary perspectives Discusses discipline-specific mobile applications Offers an opportunity to meet the needs of contemporary learners and foster their competencies as lifelong learners Addresses emerging issues in technology and pedagogy
