Calculating binomial probability (practice) | Khan Academy Bernoulli Experiments, Binomial Distribution If a person randomly guesses the answers to 10 multiple choice questions, we can ask questions like I what is the probability that they get none right? I what is the probability that they get all ten right? I what is the probability that they get at least three right? I how many do they get right on ... Bernoulli Experiments, Binomial Distribution In a binomial distribution the probabilities of interest are those of receiving a certain number of successes, r, in n independent trials each having only two possible outcomes and the same probability, p, of success. So, for example, using a binomial distribution, we can determine the probability of getting 4 heads in 10 coin tosses. The Binomial Distribution That was a lot of work for something we knew already, but now we have a formula we can use for harder questions. Example: Sam says "70% choose chicken, so 7 of the next 10 customers should choose chicken" ... what are the chances Sam is right? ... to see the Binomial Distribution in action. Throw the Die. A fair die is thrown four times ... The Binomial Distribution Binomial Distribution: Example #1. Objective: Compute probabilities and quantiles for a binomial random variable representing the number of correct guesses on a multiple-choice test and visualize these quantities using the Binomial Applet. Problem Description: A multiple choice test has four possible answers to each of 16 questions. A student guesses the answer to each question, i.e., the ... Binomial Distribution: Example #1 - West Virginia University A basketball player has a 0.479 probability of making a free throw and a 0.521 probability of missing. If the player shoots 17 free throws, we want to know the probability that he makes more than 9 of them. (Consider made free throws as successes in the binomial distribution.)
