One of the very few accounts in English of German idealism, this ambitious work advances and revises our understanding of both the history and the thought of the classical period of German philosophy. As he traces the structure and evolution of idealism as a doctrine, Frederick Beiser exposes a strong objective, or realist, strain running from Kant to Hegel and identifies the crucial role of the early romantics--HÄ¶lderlin, Schlegel, and Novalis--as the founders of absolute idealism. Traditionally, German idealism is understood as a radical form of subjectivism

that expands the powers of the self to encompass the entire world. But Beiser reveals a different--in fact, opposite--impulse: an attempt to limit the powers of the subject. Between Kant and Hegel he finds a movement away from cosmic subjectivity and toward greater realism and naturalism, with one form of idealism succeeding another as each proved an inadequate basis for explaining the reality of the external world and the place of the self in nature. Thus German idealism emerges here not as a radical development of the Cartesian tradition of philosophy, but as the first important break with that tradition. Table of Contents: Introduction 1. For anyone wishing to understand the process of transforming education in Spain, Inmaculada Egido has presents a detailed and encyclopedic description of events. Against historic background, this book discusses the impact of recent and current change, a process which has transformed education from a very centralised to a decentralised and democratic system. As the author indicates :In the last three decades education in Spain has been characterised by a profound transformation. Practically, there is no aspect of the educational system that has not been modified during this period, including both the administration and government of education and the structure and content of educational levels, the education financing and the training and work conditions of teachers... despite the delay in the starting point the achievements of the Spanish educational system in the last years are undeniable'. The autonomy of schools receives much attention not the least because of the changes which affect school governance, the participation of parents and the role of the school principal. The author concludes that, despite democratisation, there remains the need to further this process in relation to the internal functioning of schools and especially in relation to the actual participation of parents and pupils.
