Illustrated with over 30 photos. The story of the Marine Corps U.S. Special Operations Command Detachment, which became known as Det One, is an extraordinary tale. On its face, the story would not rate a minute's glance. One small group of Marines, about a hundred in number, formed, trained, and went to war. This all happened as the nation was 18 months into the Global War on Terrorism and as the Marine Corps was deploying I Marine Expeditionary Force in Operation Iraqi Freedom. Yet the story behind the basic facts is not only far more intricate and fascinating, with dramatic episodes and intrepid characters from the Pentagon to Camp Pendleton, it portended great significance for the Marine Corps. What makes the Det One story extraordinary is the shift in Marine Corps policy that brought it about, the maturation of the special operations capabilities of forward-deployed Marine expeditionary units that made it possible, and the patriotism, valor, fidelity, and abilities of the Marines and Navy Corpsmen who manned it. Although Det One has passed now into the history books, its legacy survives in the formation of Marine Corps Special Operations Command and in the lessons learned and experiences of its members, who now continue to serve in dozens of units.

Beloved community physician and veteran Dr. Michael Reece has returned home from service in Afghanistan a changed man. Recovered from a horrific injury sustained in a Taliban ambush, he has made strides in returning to his normal civilian life. That all changes when he learns he is to receive the military's highest award; the Medal of Honor. The resulting publicity as well as the shocking murder of his former childhood mentor and current United States Senator threatens to expose secrets from his past he had hoped to keep hidden forever. The aftermath forces him to make decisions that could not only threaten his own life, but the lives of those closest to him. As the hunt for the killer escalates and demons from his past return, Reece must deal with his own survivor's guilt and face hard choices that could either give him peace or destroy him. He must rely on the bonds of brotherhood forged both on the battlefield and in the horrors of the past to find a way to survive and save his family. The worlds of politics, war and crime collide in a story that will pull the reader into a world where very little is as it seems on the surface.

The year is 2013. A member of the elite Delta Force Unit, Warrant Officer James Chase, is a top soldier in the United States Army. On this brisk November morning, he's enroute for another mission to capture a High Value Target with no reason to believe it will go any differently than the dozens of other missions during his military career. He's about to find out he was wrong...In this thrilling and fast-paced tale of survival against seemingly unsurmountable odds, Chase must race

against time in a desperate attempt to evade the terroristic Islamic Revolutionary Guard Corps. Alone and surrounded by enemy forces in hostile territory with no idea what happened to the rest of his team, there's only one thing Chase can do to survive his harrowing ordeal. He must escape Iran. But IRGC soldiers are hot on his trail every step of the way and won't stop until Chase is captured or killed. Will James Chase make it out alive or be captured and tortured for intel before his beheading is videotaped for the world to see?

The United States Army Corps of Engineers (USACE) has played a role in every major conflict since the American Revolution, and has steadily been playing a more expansive role in the global war on terrorism (GWOT). Expeditionary operations conducted by American military forces since the terrorist attacks of 11 September 2001 have included missions that involve operational infrastructure development. Operational infrastructure development is the establishment and repair of power facilities, roads, airfields, ports, installations, and communications systems by operational-level military commands. In the strategic environment of the 21st Century, the United States Army Corps of Engineers (USACE) possesses operational and tactical capabilities that can be decisive when integrated, leveraged, and properly utilized by operational commanders and their staffs. American military officers can gain from a better understanding of the USACE; specifically, its composition, organization, and purpose; its engagement in recent operations in Afghanistan and Iraq; how its state-side components have been aligned with the regional combatant

commanders; and what this suggests for the future. The USACE has the depth of engineering skill and the technical expertise to help commanders use operational infrastructure development as a means to create lines of operations for the application of national power. Moreover, the lessons from Afghanistan and Iraq show that the USACE's capabilities can create favorable second- and third-order strategic effects when properly integrated into a campaign. In the future, the USACE will play a larger role in expeditionary operations and should be familiar to planners who work at the operational level.

More than 3.7 million U.S. service members have participated in operations taking place in the Southwest Asia Theater of Military Operations since 1990. These operations include the 1990-1991 Persian Gulf War, a post-war stabilization period spanning 1992 through September 2001, and the campaigns undertaken in the wake of the September 11, 2001, attacks. Deployment to Iraq, Kuwait, Saudi Arabia, Bahrain, Gulf of Aden, Gulf of Oman, Oman, Qatar, the United Arab Emirates, and Afghanistan exposed service members to a number of airborne hazards, including oil-well fire smoke, emissions from open burn pits, dust and sand suspended in the air, and exhaust from diesel vehicles. The effects of these were compounded by stressors like excessive heat and noise that are inevitable attributes of service in a combat environment. Respiratory Health Effects of Airborne Hazards Exposures in the Southwest Asia Theater of Military Operations reviews the scientific evidence regarding respiratory health outcomes in veterans of the Southwest Asia conflicts and identifies research that could feasibly be conducted to address outstanding questions and generate answers, newly emerging technologies that could aid in these efforts, and organizations that the Veterans Administration might partner with to accomplish this work.

This thesis contends that Navy and Marine Corps Intelligence would be more effective in the Global War on Terrorism if they were more integrated. Navy and Marine Corps Intelligence integration should bring Sailors and Marines together in all aspects of warfare to conduct coordinated intelligence. This does not imply that Sailors and Marines should be unified into one force. In fact, it is the unique skills of each service that make them indispensable to the other. Naval Intelligence provides the large scale team of professionals, the robust onboard systems, and communications, and the air intelligence/ targeteering expertise. The Marine Corps provides detailed human intelligence in austere, anti-access environments. Designed for highly accurate targeting and raids ashore, Marine Corps intelligence can provide the timely, accurate, and relevant intelligence needed to fight the global war on terrorism for Expeditionary Strike Groups, Carrier Strike Groups, and even Surface Action Groups. The Naval Operating Concept for Joint Operations calls for further integration from both the Navy and the Marine Corps. As Sea Power 21 and Marine Corps Strategy 21 merge into Naval Power 21, the need for further Navy and Marine Corps integration becomes clear. This will challenge current organizational mindsets. Nevertheless, sea based Sailors and Marines will have to be able to operate side by side seamlessly in order to be victorious in the Global War on Terrorism.

This is a 130-page informative, inspirational, and entertaining Leaving Home Guidebook for young adults leaving home for the First Time to College, the Military or an away job. Written by an Iraq War Veteran and Helicopter Pilot that developed an interest in sociology and statistics and their application to happiness, success, and longevity. A perfect gift for going away. What's in this Book is most of the critical stuff a parent would want their kids to know before Leaving Home with true stories and interesting facts about a range of topics in life. I started this book as a reference for my kids before they leave out the door for college or elsewhere. I wanted to let them know what Dad and Mom thought about keeping a moderate perspective and avoiding conflict. I also wanted to input information that could give them a better shot at living the happiest, most successful, and longest lives they could. Like many parents I have spoken to, I did not want to have regrets on something I forgot to tell my child that could have helped him or her later on. So, on a range of issues from modern science, sociology, politics, religion, relationships, and life, I laid it out there. This book is for folks who see themselves as in the middle, the ones that don't tend to take extreme positions; but rather, want to try and understand the opportunities and challenges ahead in the 21st Century. My hope is that it can help young adults do a lot better in life than they would have if they would not have gotten to read it. Many thanks to those who gave me the support to get this book written and distributed to those who need it. Billy is an Iraq War Veteran with over eight years in the Marine Corps from 2001 to 2009. He served in two deployments to the Middle East in 2005 and 2007 as a CH-46E helicopter pilot. He received Norwich University's William D. Hasset Prize in Political Science as a senior in college in 2000. His military awards include the Navy and Marine Corps Commendation Medal, Air Medal-Strike (4 Awarded), Global War on Terrorism Expeditionary medal (Kuwait), Sea Service Deployment Ribbon (2 Awarded), Iraq Campaign Medal(with one Bronze Service Star), the Global War on Terrorism Service Medal, and a Boeing Rescue Citation for the evacuation of civilian casualties in Iraq in 2005. He has a BA in Political Science from Norwich University (2001) and a Masters in Business Administration from University of Wisconsin-Consortium (2013). Billy has also worked in manufacturing for 5 years serving as a Quality Supervisor, Quality Engineer, Six Sigma Black Belt, and Quality Manager. He has a number of certifications from Villanova University in Six Sigma and Lean. His intrigue with the latest developments in International Affairs, Sociology and Cultural Conflict, Technology and Science, Health, and Mathematics is evident in this book. He hopes the book helps to serve as an objective fall back for young adults when making life decisions.

Through its history, the United States Air Force has struggled with the most efficient and effective way to provide for its own air base ground defense. This monograph submits a solution intended to end the debate. In an effort to provide the most comprehensive answer possible, the method used to develop this monograph contains two key aspects. The first of these aspects is a historical study

of the Air Force's air base ground defense dilemma. Included is a look at the US Army Air Forces' attempts to solve the problem in World War II. The initial history is followed by a study of the US Air Force's continuing efforts to solve the dilemma starting with a study of air base defense issues in Korea and continuing through the current Global War on Terrorism. The second key aspect is a historical case study of two Air Forces that faced similar issues. The first of these is the United Kingdom's Royal Air Force and the second is the German Luftwaffe of World War II. Each employed different methodologies and subsequently achieved different results. The results of the analysis contained in this monograph provide a clear answer. To finally solve the air base ground defense problem, the US Air Force will have to accept risk with regards to resource constraints in order to mitigate risk to expeditionary operations. Failure to embrace the capability necessary to engage and defeat threats to deployed airmen and resources in the future will have a direct impact on the US Air Force's ability to sustain global reach and global power in the Twenty-First Century. This compilation includes a reproduction of the 2019 Worldwide Threat Assessment of the U.S. Intelligence Community. At issue is the fact that today's military planners have grown accustomed to American air superiority as a given in the current operating environment. Furthermore, the increasing sister-service reliance on joint fires places air power at a premium. These factors, together with a potential adversary's inability to compete with American airpower, highlight the increasing vulnerability of airpower assets while on the ground. As Italian Army General Giulio Douhet observed in 1921, "It is easier and more effective to destroy the enemy's aerial power by destroying his nests and eggs on the ground than to hunt his flying birds in the air." Subsequently, the need exists to solve the expeditionary base defense problem currently facing the USAF.

THE NEW YORK TIMES BESTSELLER The only comprehensive, firsthand account of the fourteen-hour firefight at the Battle of Keating in Afghanistan by Medal of Honor recipient Clinton Romesha, for readers of *Black Hawk Down* by Mark Bowden and *Lone Survivor* by Marcus Luttrell. "It doesn't get better." To us, that phrase nailed one of the essential truths, maybe even the essential truth, about being stuck at an outpost whose strategic and tactical vulnerabilities were so glaringly obvious to every soldier who had ever set foot in that place that the name itself—Keating—had become a kind of backhanded joke." In 2009, Clinton Romesha of Red Platoon and the rest of the Black Knight Troop were preparing to shut down Command Outpost (COP) Keating, the most remote and inaccessible in a string of bases built by the US military in Nuristan and Kunar in the hope of preventing Taliban insurgents from moving freely back and forth between Afghanistan and Pakistan. Three years after its construction, the army was finally ready to concede what the men on the ground had known immediately: it was simply too isolated and too dangerous to defend. On October 3, 2009, after years of constant smaller attacks, the Taliban finally decided to throw everything they had at Keating. The ensuing fourteen-hour battle—and eventual victory—cost eight men their lives. Red Platoon is the riveting firsthand account of the Battle of Keating, told by

Romesha, who spearheaded both the defense of the outpost and the counterattack that drove the Taliban back beyond the wire and received the Medal of Honor for his actions.

Achieving in an Imperfect System: Avoiding the Fifth Point of Contact: The Gray Zone By: Darren W. Hargrove SGM(R) *Achieving in an Imperfect System* is about your character and how to avoid situations that call your character into question. Simply put, gracefully eat sh*t instead of kissing ass to be successful and not have your character to ever be in question. That is the difference between the haves and have-nots. Even doing the right things does not always equate to the success you want or deserve. Inspire future leaders to not measure their success only by promotions; this is a trap because it is not guaranteed. Even the Monday-through-Friday, nine-to-five leader can get promoted. Remember, being successful is different from being great! Things will not always come when you want them. You may have to go through many other things to get to where you want to be in life.

The Joint Service Family Support Network is an Office of the Secretary of Defense pilot program in the Pacific Region, working in concert with civilian agencies, intended to establish a comprehensive multi-agency approach for community support and services to meet the diverse needs of Active, mobilized Guard, and Reserve Service Members and their families. The Global War on Terrorism presents new challenges for military families. Family needs of an expeditionary force will likely remain constant or increase regardless of the length of the Global War on Terrorism. The current stove-piped component systems are not structured or funded to efficiently and effectively deliver services. This paper analyzes specific outcomes resulting from initiatives and informal networking that are occurring during the pilot period. It also addresses issues that need to be identified for higher headquarters consideration and resolution.
