"Thoroughly updated, this revision builds on the solid foundation of the previous edition and retains its thorough and detailed presentation of the principles of economics, its emphasis on real-world examples and applications, its development of critical thinking skills, its diagrams renowned for pedagogy and precision, and its path-breaking technology. Most chapters have been thoroughly reworked to achieve even greater clarity and to place greater emphasis on applications to current issues. Some sections of chapters have been removed and other sections added to cover new issues, particularly those that involve current policy problems. Current issues organise each chapter. News stories about today's major economic events tie each chapter together, from new abbreviated chapter-opening vignettes to Economics in the News and end-of-chapter problems and applications and online practice. Economics in the News boxes show students how to use the economic toolkit to understand the events and issues they are confronted with in the media. At Issue boxes show two sides of a controversial issue and helps students to apply the economic way of thinking to clarify and debate the issues. Among the many issues covered in one or more of the features described above are: Capitalism and its critics in Chapter 1 The supply elasticity of face masks in Chapter 4 Toilet paper price gouging in Chapter 5 The expansion of video streaming in Chapter 8 Climate

change and wind power in Chapters 2 and 16 Brexit and Covid effects on UK growth in Chapter 26 Inflation risk in the EU in Chapter 28 Fiscal stimulus in Chapter 29 The Bank of England's extraordinary actions in Chapter 30 Extraordinary monetary stimulus in Chapter 30"--

Design has long expressed and established itself as an independent research competence – a fact that also companies, institutions and politicians have come to acknowledge. What is still needed, however, is a stronger public platform for design to

confidently reflect upon this process and to establish and communicate the specific innovative and experimental dimension of design research. For this reason, BIRD, the Board of International Research in Design, has developed the New Experimental Research in Design / NERD format. The edited conference contributions of twelve young researchers from all over the world provide an impressive and diverse and insightful range of intelligent and inspiring approaches in design research, giving rise to further debate and action in the rapidly evolving field.

This text collates and examines the jurisprudence that currently exists in respect of blood-tied genetic connection, arguing that the right to identity often rests upon the ability to identify biological ancestors, which in turn requires an absence of adult-centric veto norms. It looks firstly to the nature and purpose of the blood-tie as a unique item of birthright heritage, whose socio-cultural value perhaps lies mainly in preventing, or perhaps engendering, a feared or revered sense of 'otherness.' It then traces the evolution of the various policies on 'telling' and accessing truth, tying these to the diverse body of psychological theories on the need for unbroken attachments and the harms of being origin deprived. The 'law' of the blood-tie comprises of several overlapping and sometimes conflicting strands: the international law provisions and UNCRC Country Reports on the child's right to identity, recent Strasbourg case law, and domestic case law from a number of jurisdictions on issues such as legal parentage, vetoes on post-adoption contact, court-delegated decision-making, overturned placements and the best interests of the relinquished child. The text also suggests a means of preventing the discriminatory effects of denied ancestry, calling upon domestic jurists, legislators, policy-makers and parents to be mindful of the long-term effects of genetic 'kinlessness' upon origin deprived persons, especially where they have been tasked with protecting this vulnerable section of the population.

Misinformation. Job displacement. Information overload. Economic inequality. Digital addiction. The breakdown of democracy, civility, and truth itself. This open access book explores the conscious and unconscious norms, values, and characteristics that drive behaviors within the high-tech capital of the world, Silicon Valley, and the sector it represents. In an era where the reach and influence of a single industry has the potential to define

the future of our world, it has become apparent just how little we know about the organizations driving these changes. The Psychology of Silicon Valley offers a revealing look inside the mind of world's most influential industry and how the identity, culture, myths, and motivations of Big Tech are harming society. The book argues that the bad values and lack of emotional intelligence borne in the vacuum of Silicon Valley will have lasting consequences on everything from social equality to the future of work to our collective mental health. Katy Cook expertly walks us through the psychological landscape of Silicon Valley, including its leadership, ethical, and cultural problems, and artfully explains why we cannot afford to ignore the psychology and values that are behind our technology any longer.

Institutional care for seniors offers a cultural repository for fears and hopes about an aging population. Although enormous changes have occurred in how institutional care is structured, the legacies of the poorhouse still persist, creating panicked views of the nursing home as a dreaded fate. The paradoxical nature of a space meant to be both hospital and home offers up critical tensions for examination by age studies scholars. The essays in this book challenge stereotypes of institutional care for older adults, illustrate the changes that have occurred over time, and illuminate the continuities in the stories we tell about nursing homes.

This book tells the story of the renaissance of the Kurna language, the language of Adelaide and the Adelaide Plains in South Australia, principally over the earliest period up until 2000, but with a summary and brief discussion of developments from 2000 until 2016. It chronicles and analyses the efforts of the Nunga community, and interested others, to reclaim and relearn a linguistic heritage on the basis of mid-nineteenth-century materials. This study is breaking new ground. In the Kurna case, very little knowledge of the language remained within the

Aboriginal community. Yet the Kurna language has become an important marker of identity and a means by which Kurna people can further the struggle for recognition, reconciliation and liberation. This work challenges widely held beliefs as to what is possible in language revival and questions notions about the very nature of language and its development.

This book argues that the scientific concept of feedback - the idea that change in some element of a system can cause further change in that element - represents a general concept of economic change. Positive feedback causes runaway change, such as a market bubble, inflation or long-run growth, while negative feedback causes stability and stasis. Emphasising both kinds of feedback stands in contrast to the equilibrium theories of classical economics which, in effect, emphasise negative feedback only. In practical terms, the feedback perspective implies a need for extensive government involvement in the economy to suppress undesirable feedback effects - such as those causing wild instability or self-perpetuating inequality - while supporting desirable feedback effects - such as those causing economic growth. ----- For decades, free-market economists have told a consistent story. Markets are rational, efficient, stable and fair, and even volatile financial markets should be left mostly to their own devices. The economic crisis that began in 2007 has, however, disproven such belief in the perfection of markets. The reason market fundamentalism fails is simple: it is built on economic theories that incorporate only one half of how the economy actually operates. These theories focus on a concept of long-run equilibrium that sees the economy as being continually drawn back to balance after any change from this position, in a form of what scientists would call negative feedback. However, there is also positive feedback; a process

whereby a given change amplifies itself until the system is driven far from equilibrium, and this phenomenon is equally visible in the economy. Positive feedback drives economic growth, speculative bubbles, inflation, recessions, deflation and self-perpetuating inequality. It is what gives us the secular trends and cyclical

fluctuations we observe in the real economy. And it deserves to be a central part of our economic theory. This book makes a first attempt at applying the concept of feedback to economic theory and economic policy. It recognises that the state must support

desirable feedbacks while suppressing undesirable ones. But it also recognises that central planning leads to oppression and inefficiency. This leads us back to the common-sense idea of a mixed economic system in which the role of the state is almost as great as that of the market.
