Selected papers from the International Airfield and Highway Pavements Conference 2021, held virtually June 8-10, 2021. Sponsored by the

Transportation & Development Institute of ASCE. This collection contains 17 peer-reviewed papers on pavement design, construction, and condition evaluation. Topics include: pavement design methods and advanced modeling techniques for highway pavements; construction specifications and quality monitoring; accelerated pavement testing; rehabilitation and preservation methods; pavement condition evaluation; and network-level management of pavements. This proceedings will be of interest to engineers, designers, project/construction managers, researchers, and contractors involved in

the design and construction of airfield and highway pavements.

Eleventh International Conference on the Bearing Capacity of Roads, Railways and Airfields

This manual is intended to guide, assist, and instruct concrete inspectors and others engaged in concrete construction and testing, including field engineers, construction superintendents, supervisors, laboratory and field technicians, and workers. Designers may also find the

manual to be a valuable reference by using the information to better adapt their designs to the realities of field construction.

Because of the diverse possible uses of the manual and the varied backgrounds of the readers, it includes the reasoning behind the technical instructions.

The field of concrete construction has expanded dramatically over the years to reflect the many advances that have taken place in the concrete industry.

Although many of the fundamentals presented in previous editions of this manual remain relevant and technically correct, this eleventh edition incorporates new material to address these advances in technology

### **Guidelines and Procedures for Maintenance of Airport Pavements**

Comprehensive and practical, Pavement Asset Management provides an essential resource for educators, students and those in public agencies and consultancies who are directly responsible for managing road and airport pavements. The book is comprehensive in the integration of activities that go into having safe and cost-effective pavements using the best technologies and management processes available. This is accomplished in seven major parts, and 42 component chapters, ranging from the evolution of pavement management to date requirements to

determining needs and priority programming of rehabilitation and maintenance, followed by structural design and economic analysis, implementation of pavement management systems, basic features of working systems and finally by a part on looking ahead. The most current methodologies and practical applications of managing pavements are described in this one-of-a-kind book. Real world up-to-date examples are provided, as well as an extensive list of references for each part.

### **Roadways and Airport Pavements**

This proceedings, Airport Pavement Innovations-Theory to Practice, consists of papers presented at

the ASCE Specialty Conference held in Vicksburg, Mississippi, from September 8-10, 1993. It covers such topics as: techniques to improve airport capacity, environmental issues, pavement design and performance evaluation, and landside issues. Case studies of new airports in the United States, Europe, and the Far East are also presented. With airport design and construction continuing to be a challenge to civil engineers, this proceedings contributes to the sharing of knowledge necessary for the development of technical improvements.

Research in Airport Pavements

This collection contains

35 papers presented at the 2003 Airfield Pavement Specialty Conference, held in Las Vegas, Nevada, September 21-24, 2003.

**BuDocks Technical Digest, Construction, Maintenance & Operation of the Navy's Shore Establishments**

TRB's Airport Cooperative Research Program (ACRP) Synthesis 22: Common Airport Pavement Maintenance Practices explores how airports implement a pavement maintenance management program, including inspecting and tracking pavement condition, scheduling maintenance, identifying necessary funds, and treating distresses in asphalt and concrete

pavements.
