Most Americans had no idea what Common Core was in 2013, according to polls. But it had been creeping into schools nationwide over the previous three years, and children were feeling its effects. They cried over math homework so mystifying their parents could not help them, even in elementary school. They read motley assortments of “informational text” instead of classic literature. They dreaded the high-stakes tests, in unfamiliar formats, that were

increasingly controlling their classrooms. How did this latest and most sweeping “reform” of American education come in mostly under the radar? Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers, and it led to a big tangle of history and politics, intrigue and arrogance. She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K–12 classes, and how the Obama administration pressured states to adopt them. Thus a federalized education scheme took root, despite legal prohibitions against federal involvement in curriculum. Common Core and its testing regime were touted as “an

absolute game-changer in public education,” yet the evidence so far suggests that kids are actually learning less under it. Why, then, was such a costly and disruptive agenda imposed on the nation’s schools? Who benefits? And how can citizens regain local self-governance in education, so their children’s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats? The Education Invasion offers answers and remedies.

The American people generally perceive that the United States is headed in “the wrong direction,” US influence worldwide is waning, Capitol Hill is not adequately representing the public’s interests, and

their personal economic wellbeing is in jeopardy. This book squarely tackles the list of “fault lines” currently facing the United States, including, among others, Beltway dysfunctionism, concentrated wealth and income not seen since the late 1920s, an ultra-expensive and inefficient health-care system, runaway entitlement spending, stagnant upward mobility, debilitating “crony capitalism,” and incoherent foreign policy. Even more importantly, the book offers explicit policy recommendations for solving each fault line, relying extensively on “best practices” in the public and private sectors both at home and abroad. Moreover, the author emphasizes that the United States is entering a special period which provides it with advantages not found anywhere else in the world—a

major energy boom, favorable demographics, unparalleled high-technology innovation, huge inward investment flows from abroad, the revival of its manufacturing sector, and its magnetism in attracting to its shores the very best and brightest from around the world. Dr. Fry asserts that it is quite reasonable to assume that the United States will enter a “Renaissance America” period by 2030. Doing so, however, will require painful short-term sacrifices, major policy changes, and the restoration of vibrant representative government. In effect, the American people must overwhelmingly embrace Abraham Lincoln’s vision of governance “of the people, by the people, and for the people.”

Now in its seventh year, this annual has established an international reputation as an authoritative but affordable summary of all that has happened in the naval world in the previous twelve months. It combines regional surveys with one-off major articles on noteworthy new ships and other important developments. Besides the latest warship projects, it also looks at wider issues of importance to navies, such as aviation and electronics, and calls on expertise from around the globe to give a balanced picture of what is going on and to interpret its significance. The 2015 edition looks in detail at the French Navy and the Bangladesh and Myanmar navies, while significant ships include the Montford Point class mobile landing platforms, the Samuel Becket offshore

patrol vessels, and the Skjold class fast attack craft. There are technological reviews dealing with naval aviation by David Hobbs, and current mine warfare developments by Norman Friedman, while warship recycling is discussed by Ian Buxton. Intended to make interesting reading as well as providing authoritative reference, there is a strong visual emphasis, including specially commissioned drawings and the most up-to-date photographs and artists' impressions. For anyone with an interest in contemporary naval affairs, whether an enthusiast or a defence professional, this annual has become required reading.

This volume offers comprehensive 'state-of-the-art' overviews of educational policies concerning the teaching of English in a large number of Asian countries. Each contribution is written by a leading expert and gives a clear assessment of current policies and future trends. Starting with a description of the English education policies in the respective countries, the contributors then delve into the 'nuts and bolts' of the English education policies and how they play out in practice in the education system, in schools, in the curriculum, and in teaching. Topics covered include the balance between the acquisition of

English and the national language, political, cultural, economic and technical factors that strengthen or weaken the learning of English.

The 2012 GCSE English results prompted significant controversy, which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007-09 development phase of the qualification- in particular the turbulence which resulted from the shift away from a mostly linear to a modular system, combined with a high proportion of controlled assessment and generous marking tolerances. Exam

board experts raised concerns at the time, but these were not acted upon by the regulator (the then-interim Ofqual). Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening, with consequences for grade awarding. The current status of Ofqual, as an independent regulator accountable to Parliament, is the right one. However, the Coalition Government is bringing in wholesale changes to GCSEs and A levels, to a tight timetable and at the same time. Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England, Wales and

Northern Ireland, without careful reflection on what might be lost, or consensus that this is the right thing to do.

The History of Alternative Test Methods in Toxicology uses a chronological

approach to demonstrate how the use of alternative methods has evolved from their conception as adjuncts to traditional animal toxicity tests to replacements for them. This volume in the History of Toxicology and Environmental Health series explores the history of alternative test development, validation, and use, with an emphasis on humanity and good science, in line with the Three Rs (Replacement, Reduction, Refinement) concept expounded by William Russell and Rex Burch in 1959 in their now classic volume, The Principles of Humane Experimental Technique. The book describes the historical development of technologies that have influenced the application of alternatives in toxicology and safety testing. These range from single cell monocultures to

sophisticated, miniaturised and microfluidic organism-on-a-chip devices, and also include molecular modelling, chemoinformatics and QSAR analysis, and the use of stem cells, tissue engineering and hollow fibre bioreactors. This has been facilitated by the wider availability of human tissues, advances in tissue culture, analytical and diagnostic methods, increases in computational processing, capabilities, and a greater understanding of cell biology and molecular mechanisms of toxicity. These technological developments have enhanced the range and information content of the toxicity endpoints detected, and therefore the relevance of test systems and data interpretation, while new techniques for non-invasive diagnostic imaging and

high resolution detection methods have permitted an increased role for human studies. Several key examples of how these technologies are being harnessed to meet 21st century safety assessment challenges are provided, including their deployment in integrated testing schemes in conjunction with kinetic modelling, and in specialized areas, such as inhalation toxicity studies. The International Symposium on Dynamics of Vehicles on Roads and Tracks is the leading international gathering of scientists and engineers from academia and industry in the field of ground vehicle dynamics to present and exchange their latest innovations and breakthroughs. Established in Vienna in 1977, the International Association of Vehicle System Dynamics (IAVSD) has since held its biennial symposia throughout Europe and in the USA, Canada, Japan, South Africa and China. The main objectives of IAVSD are to promote the development of the science of vehicle dynamics and to

encourage engineering applications of this field of science, to inform scientists and engineers on the current state-of-the-art in the field of vehicle dynamics and to broaden contacts among persons and organisations of the various countries engaged in scientific research and development in the field of vehicle dynamics and related areas. IAVSD 2017, the 25th Symposium of the International Association of Vehicle System Dynamics was hosted by the Centre for Railway Engineering at Central Queensland University, Rockhampton, Australia in August 2017. The symposium focused on the following topics related to road and rail vehicles and trains: dynamics and stability; vibration and comfort; suspension; steering; traction and braking; active

safety systems; advanced driver assistance systems; autonomous road and rail vehicles; adhesion and friction; wheel-rail contact; tyre-road interaction; aerodynamics and crosswind; pantograph-catenary dynamics; modelling and simulation; driver-vehicle interaction; field and laboratory testing; vehicle control and mechatronics; performance and optimization; instrumentation and condition monitoring; and environmental considerations. Providing a comprehensive review of the latest innovative developments and practical applications in road and rail vehicle dynamics, the 213 papers now published in these proceedings will contribute greatly to a better understanding of related problems and will serve as a

reference for researchers and engineers active in this specialised field. Volume 2 contains 135 papers under the subject heading Rail.

James Henslin has always been able to share the excitement of sociology, with his acclaimed "down-to-earth" approach and personal writing style that highlight the sociology of everyday life and its relevance to students' lives. Adapted for students studying within Australia, this text, now in a second edition, has been made even more relevant and engaging to students. With wit, personal reflection, and illuminating examples, the local author team share their passion for sociology, promote sociology to students and entice them to delve deeper into

this exciting science. Six central themes run throughout this text: down-to-earth sociology, globalisation, cultural diversity, critical thinking, the new technology, and the growing influence of the mass media on our lives. These themes are especially useful for introducing the controversial topics that make studying sociology such a lively, exciting activity.

Chinas rise casts a vast and uncertain shadow over the regional balance of power in the Asia Pacific, and nowhere is this clearer than in the South China Sea. The significance of the fraught territorial disputes in this potentially resource-rich sea extends far beyond the small

groupings of islands that are at their heart, and into the world of great-power politics. As the struggle for hegemony between the US and China intersects with the overlapping aspirations of emerging, smaller nations, the risk of escalation to regional conflict is real. Christian Le Mi and Sarah Raine cut through the complexities of these disputes with a clear-sighted, and much-needed, analysis of the assorted strategies deployed in support of the multiple and competing claims in the SCS. They make a compelling case that the course of these disputes will determine whether the regional order in Southeast Asia is one of cooperation, or one of competition and even conflict. *The One Percent Solution* ABC-CLIO

It is also a country which is relatively unknown and relatively little studied. This book provides a comprehensive, detailed survey of economic and political developments in the last few years. As such it provides many insights into the current trends which are likely to shape the country's future direction. The Government's Proposals for Reform,

An energy industry insider delivers hard truths about the reality of fracking. Conventional wisdom has North America entering a new era of energy abundance thanks to shale gas. But has industry been honest? Cold, Hungry and in the Dark argues that declining productivity combined with increasing demand will trigger a crisis that will cause prices to skyrocket, damage the economy, and have a profound impact on the lives of nearly every North American. Relying on faulty science, bought-and-paid-for-white papers masquerading as independent research and "industry consultants," the "shale promoters" have vastly overstated the viable supply of shale gas

resources for their own financial gain. This startling exposé, written by an industry insider, suggests that the stakes involved in the Enron scandal might seem like lunch money in comparison to the bursting of the natural gas bubble. Exhaustively researched and rigorously documented, *Cold, Hungry and in the Dark*: · Puts supply-and-demand trends under a microscope · Provides overwhelming evidence of the absurdity of the one hundred-year supply myth · Suggests numerous ways to mitigate the upcoming natural gas price spike The mainstream media has told us that natural gas will be cheap and plentiful for decades, when nothing could be further from the truth. Forewarned is forearmed. *Cold, Hungry and in the Dark* is vital reading for anyone concerned

about the inevitable economic impact of our uncertain energy future. “Powers’s step-by-step dismantling of the abundance myth ought to alarm policymakers, corporate managers, investors, business owners, and concerned citizens alike.”—Kurt Cobb, author of *Prelude* and contributor to *The Christian Science Monitor*

Four decades have passed since India conducted its first nuclear test. Since then the world has undergone a transition, both in terms of power dynamics and military warfare. The emergence of New Nuclear and Threshold states has transformed the traditional military warfare, making it

more asymmetric. Though the concept of nuclear deterrence in the American strategic thought has diminished, but the Asian countries still consider nuclear weapons as an important strategy in combating conventional weaknesses. This altered strategic space has created problems in the civilian and the military domains. The emergence of economically strong China aiming for military modernization, to achieve global reach through precision missiles, is making Asia edgy. A nuclear Pakistan which is constantly increasing its nuclear stockpile is creating stability-instability paradoxes in Asia. India which is also emerging as a powerful state needs to approach this dynamic shift in a holistic manner. A strategic churning has begun in Asia and whether this will be in India's

favour depends on the strategic choices that India adopts. China has revolutionized its Second Artillery through a process of "Informationization and Modernisation" and is diversifying the military technology which is having a cascading effect in Asia. Pakistan through its nuclear policy of "First Use", its alleged use of "Tactical Nuclear Weapons" is making South Asia vulnerable to nuclear terrorism. Under such conditions are there any gaps between India's nuclear doctrine and its force structure? Can India's nuclear strategy counter China? Is India capable of countering a Sino-Pak nexus? These are a few questions along with others which this book will try to unravel. Advanced Data Mining and Applications Oswaal Books and Learning Private

Are we living in an age where we are more boredom-prone? Or are other people boring us? Or could we be that boring person?! In our current information age, we are constantly connected to technology, and have so many varied ways to spend our leisure time that we should all surely never know what boredom feels like. Yet, boredom appears to be on the rise; it seems that the more we have to stimulate us, the more stimulation we crave. In a quest to relieve our boredom, we engage in dangerous risk-taking -

from extreme sports to drugs to gambling to anti-social behaviour, or we overindulge in shopping or eating. The Science of Boredom explores the causes and consequences of boredom in the fast-paced twenty-first century. Parents are desperate to keep their children entertained during every waking moment, the education system is geared towards interactivity, and attention spans are dropping as we use multiple devices at all times. But the world of work can be increasingly repetitive and routine, and we are losing the ability to tolerate this everyday tedium. Using Sandi Mann's own ground-breaking research into boredom, this book tells the story of how we act, react and cope when we are bored, and argues that there is a positive side to boredom. It

can be a catalyst for humour, fun, reflection, creativity and inspiration. The radical solution to the 'boredom problem' is to harness it rather than try

to avoid it. Allowing yourself time away from constant stimuli can enrich your life. We should all embrace our boredom and see the upside of our downtime.
