Sailing Made Easy is the
first step in a voyage that

will last you the rest of your life. It is a gift from a group of dedicated sailing professionals who have committed their lives to sharing their art, their skill, and their passion for this wonderful activity. This book, which Sailing Magazine called "best in class" upon its release in 2010, is the most comprehensive education and boating safety learn-to-sail guide to date. It is also the official textbook for the ASA Basic Keelboat Standard (ASA 101). Incorporated in the textbook are useful

illustrations and exceptional photographs of complex sailing concepts. The text's most distinguishing feature is its user friendly "spreads" in which instructional topics are self-contained on opposing pages throughout the book. There are also chapter end quizzes and a glossary to help those new to sailing to navigate their way through the extensive nautical terminology.

This book explores the

legacy of colonial heritage on Nigerian political activities and journalistic practices. It asserts that journalism and multi-party politics were introduced into the country during British colonial rule, and, while they have become domesticated and indigenised, they still exhibit traces of their roots because they emerged in a different socio-cultural and political environment. Taking as its point of departure the view that, without the colonial intervention, the Nigerian state may not

have come into being or survived in its present form, this book offers fresh insight into the impact of British colonial rule on contemporary journalistic practices and political activities more than 100 years after the â~creationâ (TM) of Nigeria. It draws attention to the enduring effect of colonial inheritance on Nigeria and how the â~creationâ (TM) process of the country produced unintended consequences that remain problematic. Using press coverage of the politics of transition-

to-civil-rule programmes during periods of military dictatorship as a case study, the book identifies trends and patterns of influence from the past that have been interlaced into the present.

This book highlights technology trends and challenges that trace the evolution of antenna design, starting from 3rd generation phones and moving towards the latest release of LTE-A. The authors explore how the simple monopole and

whip antenna from the GSM years have evolved towards what we have today, an antenna design that is compact, multi-band in nature and caters to multiple elements on the same patch to provide high throughput connectivity. The scope of the book targets a broad range of subjects, including the microstrip antenna, PIFA antenna, and the monopole antenna to be used for different applications over three different mobile generations. Beyond that, the authors take a step

into the future and look at antenna requirements for 5G communications, which already has the 5G drive in place with prominent scenarios and use-cases emerging. They examine these, and put in place the challenges that lie ahead for antenna design, particularly in mm-Wave design. The book provides a reference for practicing engineers and under/post graduate students working in this field.

Joe Carr has provided radio amateurs and short-wave listeners with the definitive design guide for sending and receiving radio signals with Antenna Toolkit 2nd edition. Together with the powerful suite of CD software, the reader will have a complete solution for constructing or using an antenna - bar the actual hardware! The software provides a simple Windows-based aid to carrying out the design

calculations at the heart of successful antenna design. All the user needs to do is select the antenna type and set the frequency - a much more fun and less error prone method than using a conventional calculator to solve formulae. The new edition has been revised to include further cases of propagation, additional antennas and also two new chapters - Small Loop Antennas (a topic of considerable interest, which has been the subject of much recent debate in the amateur

radio press); and Yagi Beam Antennas (widely used at HF and VHF). The CD software has also been updated. Joe Carr's expertise in the area of antenna design is legendary. Antenna designers, whether hobbyist or technician, can be assured they need look no further than Antenna Toolkit for the complete guide to understanding the practicalities of using and designing antennas today. A complete solution for antenna design in one package. Includes free

CD-ROM with state of the art software for all design calculations. The definitive guide to antenna design for radio amateurs and short-wave listeners.

In emergency and disaster scenarios, it is vital to have a stable and effective infrastructure for relaying communication to the public. With the advent of new technologies, more options are available for enhancing communication systems. Multimedia Services and Applications

in Mission Critical Communication Systems is a comprehensive source of academic research on the challenges and solutions in creating stable mission critical systems and examines methods to improve system architecture and resources. Highlighting innovative perspectives on topics such as quality of service, performance metrics, and intrusion detection, this book is ideally designed for practitioners, professionals,

researchers, graduate students, and academics interested in public safety communication systems.

The Black Box is not a tale of a great man. This story is about someone like you: a human being endeavoring to make tomorrow better than today. Each chapter recounts a formative experience and concludes with a 'Black Box': an explanation of how a given situation helped me develop the mindset required to thrive in that type of environment. An

airplane's black box records all circumstantial things occurring around and within the aircraft, as well as the voices (and radio transmissions) in the head of the airliner. When an airplane crashes engineers look into the black box to study what went wrong. However, black boxes also have stories of success, but we rarely look to them for those narratives. Memories, like a black box, are nearly permanent records. Black boxes are stored in reinforced shells designed

to survive 30 minutes in 2000-degree Fahrenheit heat as well as submersion in 20,000 feet deep water. Your black box is filled with helpful memories, but so often you fail to look into your black box to pull wisdom from it. Sometimes we do not want to open the black box and look in because it means seeing our hardships replayed, seeing things that cause us fear and pain. As you peer into my black box, it will inspire you to look into your own. Our black boxes are filled with

explanations of why we crash as well as stories of how we have soared above turbulence. Most of these chapters have been developed as self encapsulated stories from which a moral can be drawn without reference to previous chapters. I share the story of my life knowing that my achievements outstrip those of the average person by only a modest margin. The validity of this work lies in the distance between my starting point and where I stand today. This book is

about you. It should drive you to consult your black box as you adventure through life, and to use the experience, strength and resolve that you already have to make your journey easier and more enjoyable.

Praise is the only path to God--at least this is what many of us have been taught. But the notion that we have to be positive all the time, putting on a happy face

through anger, frustration, and pain, hinders our ability not only to heal ourselves and society, but to have an authentic relationship with the Divine. We long to connect with God over the very real sorrow in our lives and in the world around us, but so many of us were never shown how. This lack of knowing how to lament--an ancient practice of expressing anger and pain to God--damages us personally and spiritually. Pastor Abby Norman is here to tell us that we can talk to

God like that. In her fresh, tell-it-like-it-is voice, she unpacks the power of lament, providing us with the tools and the grace-filled permission to heal the problems we have been ignoring for too long. She shows us how to express our laments to God and to each other when things are definitely not okay. And through this process we will discover a richer connection with God--who has wanted nothing more than our whole selves from the start.

The papers are thematically grouped as follows: Advanced Techniques for IoT and WSNs; SDN and Network Virtualization; eHealth

and Telemedicine Mobile Applications; Security and Privacy Preservation; Communication Reliability and Protocols; Spatial Modulation Techniques; Hardware Implementation and Antenna Design. Multimedia Services and Applications in Mission Critical Communication Systems Springer
Kaplan & Sadock's Study Guide and Self-Examination Review in Psychiatry is a comprehensive review of the specialty and perfect for stand-alone review or as preparation for the

PRITE in-service, ABPN Part I, and recertification examinations. The book contains more than 1,600 multiple-choice questions and answers, with explanatory discussions of correct and incorrect responses. Chapters parallel the essential corresponding chapters in Kaplan & Sadock's Synopsis of Psychiatry, a staple of psychiatry education around the globe. Terms and definitions are consistent with DSM-IV-TR and ICD-10.

This handbook is dedicated to the conservation of stone materials by the application of polymers. A short introduction on polymer chemistry is given to highlight their characteristics and properties. After the physical and chemical attributes of stone are summarised, the problems related to its degradation are discussed. Finally, the properties of the various polymers of potential value for stone restoration are reviewed and

classified by schemes and tables, and pointers for the future are suggested. This handbook will be of great interest to those who share the author's enthusiasm for stone artworks and her dedication to their restoration and conservation.

A worldwide digital and wireless communication revolution has taken place in the last 20 years which has created a high demand in industry for graduates with in-depth expertise in digital transmission techniques and a sound and complete understanding of their core principles. Digital communications:

Principles and systems recognises that although digital communications is developing at a fast pace,

the core principles remain the same. It therefore concentrates on giving the reader a thorough understanding of core principles and extensive coaching in the solution of practical problems drawn from various application areas. The intention is that after studying the material presented, the student will have a solid foundation free of knowledge gaps, and will be fully equipped to undertake digital communication systems analysis, design and computer simulations,

and to deal with specialised applications and follow advances in the technology. Topics covered include: overview of digital communication linear and nonlinear channels and systems sampling of baseband and bandpass signals quantisation and PCM source coding and lossless data compression line codes and modulation transmission through bandlimited AWGN channels transmitted digital signals error control coding link analysis and design. Many

works on emerging digital transmission techniques are largely confined to academic research papers. This book will give postgraduate students and practicing engineers a sound mastery of the subject.

Blueprint for Green Affordable Housing is a guide for housing developers, advocates, public agency staff, and the financial community that offers specific guidance on incorporating

green building strategies into the design, construction, and operation of affordable housing developments. A completely revised and expanded second edition of the groundbreaking 1999 publication, this new book focuses on topics of specific relevance to affordable housing including: how green building adds value to affordable housing the integrated design process best practices in green design for affordable housing green operations and maintenance

innovative funding and finance emerging programs, partnerships, and policies Edited by national green affordable housing expert Walker Wells and featuring a foreword by Matt Petersen, president and chief executive officer of Global Green USA, the book presents 12 case studies of model developments and projects, including rental, home ownership, special needs, senior, self-help, and co-housing from around the United States. Each case study describes

the unique green features of the development, discusses how they were successfully incorporated, considers the project's financing and savings associated with the green measures, and outlines lessons learned. *Blueprint for Green Affordable Housing* is the first book of its kind to present information regarding green building that is specifically tailored to the affordable housing development community. Crafting together the power of words and womanhood, writer Tanya Markul has written a completely unique poetry collection fit for the phenomenal readers of today. In Tanya's words, "May we raise the bar for how we live our lives. May we ridiculously increase the amount of peace, play, creativity, beauty, love, and joy in everything we do. May we all sip from the wisdom of our suffering. And awaken with the courage to share our stories that can heal

our inner and outer worlds."

This book constitutes the proceedings of the 7th International Conference on Wireless and Satellite Services, WiSATS 2015, held in Bradford, UK, in July 2015. The conference was formerly known as the International Conference on Personal Satellite Services (PSATS) mainly covering topics in the satellite domain. As the scope of the conference widened to

include wireless systems, the conference was renamed to WiSATS. The 29 revised papers were presented at the conference in three technical sessions and one special session on "Network Coding for Satellites". WiSATS 2015 also hosted two workshops along with the main conference: The first workshop, Communication Applications in Smart Grid (CASG 2015), focused on the merging area of using communication technology within the electricity power grid for

smart monitoring and control. The second workshop, Advanced Next-Generation Broadband Satellite Systems (BSS 2015), focused on the use of satellite systems for providing next-generation broadband services. *A Survey* CRC Press

 This book is based on both industrial and academic research efforts in which a number of recent advancements and rare insights into telecommunication systems are well presented. The volume is organized into four parts: "Telecommunication Protocol, Optimization, and Security Frameworks", "Next-Generation Optical Access Technologies", "Convergence of Wireless-Optical Networks" and "Advanced Relay and

Antenna Systems for
Smart Networks."

Chapters within these
parts are self-contained

and cross-referenced to
