Love at Goon Park HarperCollins
The 1619 Project's lyrical picture book in verse chronicles the consequences of slavery and the history of Black resistance in the United States, thoughtfully rendered by Pulitzer Prize-winning journalist Nikole Hannah-Jones and Newbery honor-winning author Renée Watson. A young student receives a family tree assignment in school, but she can only trace back three generations. Grandma gathers the whole family, and the student learns that 400 years ago, in 1619, their ancestors were stolen and brought to America by white slave traders. But before that, they had a home, a land, a language. She learns how the people said to be born on the water survived. And the people planted dreams and hope, willed themselves to keep living, living. And the people learned new words for love for friend for

family for joy for grow for home. With powerful verse and striking illustrations by Nikkolos Smith, *Born on the Water* provides a pathway for readers of all ages to reflect on the origins of American identity.

How Children Learn the Meanings of Words Candlewick Press

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for

Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Babies Cambridge University Press
"Engaging, evocative...[Bloom] is a supple, clear writer, and his parade of

counterintuitive claims about pleasure is beguiling." —NPR Why is an artistic masterpiece worth millions more than a convincing forgery? Pleasure works in mysterious ways, as Paul Bloom reveals in this investigation of what we desire and why. Drawing on a wealth of surprising studies, Bloom investigates pleasures noble and seamy, lofty and mundane, to reveal that our enjoyment of a given thing is determined not by what we can see and touch but by our beliefs about that thing's history, origin, and deeper nature.

Where Do Babies Come From? Macmillan
This revolutionary, beautiful and fun picture book is a perfect way to start talking to kids early about reproduction, bodies, birth and families. It will allow parents to establish that this topic, like all others, is safe and healthy to ask and talk about.

Someone Else's Twin Crown

A comparative, illustrated discussion of the reproductive systems and process in flowers, chickens, dogs, and humans; explains how babies are conceived and born.

The Science of Babies Basic Books

Why is a forgery worth so much less than an original work of art? What's so funny about someone slipping on a banana peel? Why, as Freud once asked, is a man willing to kiss a woman passionately, but not use her toothbrush? And how many times should you baptize a two-headed twin?

Descartes' Baby answers such questions, questions we may have never thought to ask about such uniquely human traits as art, humour, faith, disgust, and morality. In this thought-provoking and fascinating account of human nature, psychologist Paul Bloom contends that we all see the world in terms of bodies and souls. Even babies have a rich understanding of both

the physical and social worlds. They expect objects to obey principles of physics, and they're startled when things disappear or defy gravity. They can read the emotions of adults and respond with their own feelings of anger, sympathy and joy. This perspective remains with us throughout our lives. Using his own researches and new ideas from philosophy, evolutionary biology, aesthetics, theology, and neuroscience, Bloom shows how this way to making sense of reality can explain what makes us human. The myriad ways that our childhood views of the world undergo development throughout our lives and profoundly influences our thoughts, feelings, and actions is the subject of this richly rewarding book.

The Laughing Baby Wide Eyed Editions
An introduction to computer engineering for babies. Learn basic logic gates with hands on examples of buttons and an output LED.

The Mother of All Questions Candlewick Press

A SUNDAY TIMES BESTSELLER 'An unadulterated delight...suffused with a sense of love and very, very funny' Maggie O'Farrell It's 2004 and Anne Enright, one of Ireland's most remarkable writers, has just had two babies: a girl and a boy. Making Babies, is the intimate, engaging, and very funny record of the journey from early pregnancy to age two. Written in dispatches, typed with a sleeping baby in the room, it has the rush of good news - full of the mess, the glory, and the raw shock of it all. An antidote to the high-minded, polemical 'How-to' baby manuals, Making Babies also bears a visceral and dreamlike witness to the first years of parenthood. Anne Enright wrote the truth of it as it happened, because, for these months and years, it

is impossible for a woman to lie. It's So Amazing! W. W. Norton & Company

Every day, everywhere, babies are born. They're kissed and dressed and rocked and fed--and completely adored by the families who love them. With an irresistible rhyming text and delightfully endearing illustrations, here is an exuberant celebration of playing, sleeping, crawling, and of course, very noisy babies doing all the wonderful things babies do best.

The Philosophical Baby National Academies Press

In this meticulously researched and masterfully written book, Pulitzer Prize-winner Deborah Blum examines the history of love through the lens of its strangest unsung hero: a brilliant, fearless, alcoholic psychologist named Harry Frederick Harlow. Pursuing the idea that human affection could be understood, studied, even measured, Harlow (1905-1981) arrived at his conclusions by conducting research--sometimes beautiful, sometimes horrible--on the primates in his University of Wisconsin laboratory. Paradoxically, his darkest experiments may have the brightest legacy, for by studying "neglect" and its life-altering consequences, Harlow confirmed love's central role in shaping not only how we feel but also how we think. His work sparked a psychological revolution. The more children experience affection, he discovered, the more curious they become about the world: Love makes people smarter. The biography of both a man and an idea, *The Measure of Love* is a powerful and at times disturbing narrative that will forever alter our understanding of human relationships. The Tiger Who Came to Tea Simon and Schuster

A tiger comes to tea at Sophie's house and eats and drinks everything in sight, so that there is nothing left for Daddy's supper.

Everywhere Babies Prometheus Books
 " War Babies: The Generation That Changed America " examines the lives and careers of Americans born between 1939 and 1945. No one has written such a book about this generation. " War Babies " deals especially with musicians and composers like Joan Baez, Bob Dylan, and Simon and Garfunkel; with film directors like Francis Ford Coppola and Martin Scorsese; with actors like Al Pacino and Robert De Niro; with athlete/activists like Muhammad Ali; with journalists like Bob Woodward and Carl Bernstein; and with politicians like John Kerry and Nancy Pelosi. These are the people who continue to shape our lives and cultures in the 21st century.

The 1619 Project: Born on the Water Cambridge University Press

A leading cognitive scientist argues that a deep sense of good and evil is bred in the bone. From John Locke to Sigmund Freud, philosophers and psychologists have long believed that we begin life as blank moral slates. Many of us take for granted that babies are born selfish and that it is the role of society—and especially parents—to transform them from little sociopaths into civilized beings. In *Just Babies*, Paul Bloom argues that humans are in fact hardwired with a sense of morality. Drawing on groundbreaking research at Yale, Bloom demonstrates that, even before they can speak or walk, babies judge the goodness and badness of others' actions; feel empathy and compassion; act to soothe those in distress; and have a rudimentary sense of justice. Still, this innate morality is limited, sometimes tragically. We are naturally hostile to

strangers, prone to parochialism and bigotry. Bringing together insights from psychology, behavioral economics, evolutionary biology, and philosophy, Bloom explores how we have come to surpass these limitations. Along the way, he examines the morality of chimpanzees, violent psychopaths, religious extremists, and Ivy League professors, and explores our often puzzling moral feelings about sex, politics, religion, and race. In his analysis of the morality of children and adults, Bloom rejects the fashionable view that our moral decisions are driven mainly by gut feelings and unconscious biases. Just as reason has driven our great scientific discoveries, he argues, it is reason and deliberation that makes possible our moral discoveries, such as the wrongness of slavery. Ultimately, it is through our imagination, our compassion, and our uniquely human capacity for rational thought that we can transcend the primitive sense of morality we were born with, becoming more than just babies. Paul Bloom has a gift for bringing abstract ideas to life, moving seamlessly from Darwin, Herodotus, and Adam Smith to *The Princess Bride*, Hannibal Lecter, and Louis C.K. Vivid, witty, and intellectually probing, *Just Babies* offers a radical new perspective on our moral lives.

Descartes' Baby Random House

When the flowers begin to bloom and the world starts turning green, animals everywhere are born. Some have lots of brothers and sisters. Some have none at all. Some are born with soft, warm fur, while some are born with smooth scales. Some can walk right away—others need a little help! As with *Il Sung Na's* previous offerings, *A Book of Babies* is filled with rich illustrations, endearing animals, and a spare text—all wrapped

up in a gorgeous package.

The Anthropology of Childhood

PEN/FAULKNER AWARD FOR FICTION

"Claire Oshetsky's novel is a marvel: its language a joy, its imagination dizzying."

—Rumaan Alam, *New York Times*

bestselling author of *Leave the World Behind* An exhilarating, provocative novel of motherhood in extremis Tiny is pregnant. Her husband is delighted. "You think this baby is going to be like you, but it's not like you at all," she warns him. "This baby is an owl-baby." When Chouette is born small and broken-winged, Tiny works around the clock to meet her daughter's needs. Left on her own to care for a child who seems more predatory bird than baby, Tiny vows to raise Chouette to be her authentic self. Even in those times when Chouette's behaviors grow violent and strange, Tiny's loving commitment to her daughter is unwavering. When she discovers that her husband is on an obsessive and increasingly dangerous quest to find a "cure" for their daughter, Tiny must decide whether Chouette should be raised to fit in or to be herself—and learn what it truly means to be a mother. Arresting, darkly funny, and unsettling, Chouette is a brilliant exploration of ambition, sacrifice, perceptions of ability, and the ferocity of motherly love.

The Danish Way of Parenting Penguin

The combination of a riveting true story and cutting-edge twin research makes this book an irresistible page-turner. Identical twins Begoña and Delia were born thirty-eight years ago in Spain's Canary Islands. Due to chaotic conditions at the hospital or simple human error, the unthinkable happened: Delia was unintentionally switched with another infant in the baby nursery. This fascinating story describes in vivid detail the consequences of this unintentional separation of identical twin sisters. The author considers not only the effects on these particular sisters, but the important implications of this and similar cases for questions concerning identity, familial bonds, nature-nurture, and the law.

Computer Engineering for Babies MIT Press

Paul presents an in-depth examination of how personalities are formed by biological, social, and emotional factors.

Against Empathy Penguin

'Manuals' for new parents illustrating many models of babyhood, shaped by different values and cultures.

Just Babies HarperCollins

An engaging introduction for very young children to the basic facts of life in a way that is gentle, age-appropriate and accessible. Research shows that children are learning about sex at an increasingly young age and often from undesirable sources. The Q&A format, with questions posed in the child's voice and answers starting simply and becoming gradually more in-depth, allows the adult to guide the conversation to a natural and satisfying conclusion. Additional questions at the back of the book allow for further discussion. Child psychologist Dr. Jillian Roberts designed the Just Enough series to empower parents/caregivers to start conversations with young ones about difficult or challenging subject matter. Other books in the series deal with diversity, death, separation and divorce.
