This book offers a timely and comprehensive snapshot of research and developments in the field of control engineering. Covering a wide range of theoretical and practical issues, the contributions describes a number of different control approaches, such adaptive control, fuzzy and neuro-fuzzy control, remote and robust control systems, real time an fault tolerant control, among others. Sensors and actuators, measurement systems, renewable energy systems, aerospace systems as well as industrial control and automation, are also comprehensively covered. Based on the proceedings of the 14th APCA International Conference on Automatic Control and Soft Computing, held on July 1-3, 2020, in Bragança, Portugal, the book offers a timely and thoroughly survey of the latest research in the field of control, and a source of inspiration for researchers and professionals worldwide.

NPI Charlie Low & Dale Comley

Technological change is a central feature of modern societies and a powerful source for social change. There is an urgent task to direct these new technologies towards sustainability, but society lacks perspectives, instruments and policies to accomplish this. There is no blueprint for a sustainable future, and it is necessary to experiment with alternative paths that seem promising. Various new transport technologies promise to bring sustainability benefits. But as this book shows, important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices. Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved - it is here that strategic niche management offers new perspectives. The book uses a series of eight recent experiments with electric vehicles, carsharing schemes, bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place. The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged, perhaps indicating a third way.

For the first time, all the most important Latin American economic integration programs are explored in the same volume in English: the Latin American Integration System (ALADI); MERCOSUR; the Andean Community; the G-3 Accord between Colombia, Venezuela, and Mexico; and the Central American Integration System (SICA). Latin American Trade Agreements explains how all of these sub-regional programs operate and where the opportunities are for foreign direct investors and exporters. It provides concrete examples of companies using the integration projects as part of their strategic business planning for Latin America. It also discusses the many opportunities available in transportation infrastructure development and intra-Latin American logistics. The Appendices include English translations of the trade agreements and important rules and regulations. Latin American Trade Agreements not only focuses on the rules for trade in goods and services, but also examines how the sub-regional projects and each member state treat subjects as diverse as environmental protection, intellectual property rights, foreign direct investment, as well as labor and tax laws. This looseleaf is an asset to lawyers, trade specialists, and international strategic planners.

Citroen C3 John Wiley & Sons

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with “motor” referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

It's more than just the story of how we built our own van Ringo, it will help you build a van bespoke to your needs. It provides definitive answers to your questions (even the ones you haven't thought of yet!) to ensure you save time and avoid expensive mistakes. From detailed gas, water and electrical system diagrams to a step-by-step build guide, you'll find everything you need to start your journey inside. Whatever your skills and budget, you can learn how to build your dream campervan. Your very own home on wheels awaits...

Citroen ZX Springer Nature

From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from The Economist examines how far technology has come and where it is heading. Part one looks at topics such as the “greying” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “digital Swiss Army knife”; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

New love. Exotic destinations. A once-in-a-lifetime adventure. What could go wrong? City girl Torre DeRoche isn't looking for love, but a chance encounter in a San Francisco bar sparks an instant connection with a soulful Argentinean man who unexpectedly sweeps her off her feet. The problem? He's just about to cast the dock lines and voyage around the world on his small sailboat, and Torre is terrified of deep water. However, lovesick Torre determines that to keep the man of her dreams, she must embark on the voyage of her nightmares, so she waves good-bye to dry land and braces for a life-changing journey that's as exhilarating as it is terrifying. Somewhere mid-Pacific, she finds herself battling to keep the old boat, the new relationship, and her floundering sanity afloat. . . . This sometimes hilarious, often harrowing, and always poignant memoir is set against a backdrop of the world's most beautiful and remote destinations. Equal parts love story and travel memoir, *Love with a Chance of Drowning* is witty,

charming, and proof positive that there are some risks worth taking.
