In this much-needed book, Graham Dunkley challenges the oft-repeated notion that free trade and global integration are the best means of development for all nations at all times – an idea that has proved even more misguided in the wake of the global financial crisis. By contrast, Dunkley reveals – through a wide range of statistical analysis and case studies – that at best the evidence is mixed. Looking systematically at issues such as trade-led growth, supply chains and financialization, *One World Mania* reveals the many problems that over-globalization has caused, often at great human cost. An

indispensible guide for anyone wishing to understand the shortcomings of current global economic policies.

This is the first comprehensive investigation of the industrial sourcing and procurement practices throughout sixty-eight construction industry supply channels across seven major commodity sectors at all levels. Construction Supply Chain Economics introduces a new model for mapping the construction sector of particular interest to construction management and economic researchers and to procurement decision makers, including policymakers and clients, as well as industry practitioners, such as contractors, consultants and materials suppliers.
