Cost Accounting John  
Wiley & Sons

The market-leading European text on management accounting and comprehensive authority on all aspects of the subject has been streamlined and substantially redesigned in its 6th edition to make it even more suitable for the needs of today's student. The aim of the new edition is to explain the principles involved in the design and evaluation of management and cost accounting information systems. The emphasis in the book is on management accounting systems that will be used for internal decision-making purposes within an organisation, however, cost accounting systems for external reporting are also comprehensively

covered. It has been brought up to date with the latest developments in the subject. Having been made stronger pedagogically with the addition of the answers to the questions and more real-world mini cases, the text brings home the relevance of the subject matter to the real world of business.

Students perform virtually the entire accounting cycle in a process-cost setting with this thorough practice case. The case effectively integrates several of the most demanding cost accounting topics into a single, coherent whole. Students can

complete considerable work in the case before more demanding topics are presented in the classroom. After predetermined overhead rates, the step method, and spoilage are covered by the instructor, then students can finish the case. For brevity this case completes the accounting cycle after one month of operation. Students handle all transactions, from general journal entries to making numerous adjusting entries at month-end and preparing the income statement for the month. Previous editions have been extensively class tested to ensure an effective case that requires little instructor supervision.

Now students can perform the accounting cycle in a job-order cost setting with this unique practice case. Students thoroughly review double-entry accounting as well as other cost accounting topics integrated into a single, coherent whole. The case is designed for maximum instructor flexibility. Students can progress significantly in the case before reviewing more demanding topics in the classroom. For instance, instructors can have students begin by calculating predetermined overhead rates for the month, or can postpone this step until near the end of the case. For brevity, this case completes an accounting cycle after one month of operation, rather than

the entire year.

Transactions of the first four days have already been journalized to provide clear examples.

Students practice the entire scope of cost accounting tasks, from making numerous adjusting entries at month-end to disposing of the under- or over-applied overhead amount and preparing pre-closing trial balances. The case is an ideal choice for use with minimal instructor supervision.
