Handbook of Research on Creating Spaces for African Epistemologies in the Inclusive Education Discourse

John Wiley & Sons

Students with disabilities who are not able to perform to the best of their abilities often find themselves learning in inaccessible environments and subjected

to increased stress levels due to the haphazard provisioning of education characterized by physical, communicative, and unsuitable teaching and learning approaches. Very often this is a result of various shortcomings including unfair assessment practices. Misconceptions and a lack of knowledge with regard to the implementation of inclusive education detract from the successful admission of students with disabilities and their retention and active participation. The Handbook of Research on Creating Spaces for African Epistemologies in the Inclusive Education Discourse explores the concept of inclusive education in an African context. It advocates for the monitoring and evaluation of inclusive education and proposes interventions

where reasonable accommodation or lack of accessibility is a reason for students with disabilities to not benefit from this system. Covering topics such as barriers to learning, rural schools, and student support, this major reference work is an essential resource for administrators, advocates for students with disabilities, policymakers, researchers, pre-service teachers, educators, academicians, and students.

research in a concise manner. Chapters have been updated to include new features, with certain chapters having received particular attention. For example, Chapter 4, on clinical assessment and diagnosis, now describes new assessment tools, such as smartphones and wearable biosensors,

that are increasingly being used by psychologists to understand human behavior. Similarly, Chapter 12 has been revised significantly to include updated information about sexual dysfunctions, gender dysphoria, and paraphilic disorders." -- Provided by publisher.
