Dictionary of Pharmaceutical Medicine Springer

This dictionary defines various terms typically used in pharmaceutical medicine. A new, 4th edition includes adaptations of the text to the steadily increasing regulatory requirements, particularly in the area of genetics/gene therapy, product quality (e.g., protection against falsified medicines) and of product safety (pharmacovigilance). Further evolving areas that are covered by the 4th edition are typical "grey zones" (health effects often borderline to medicinal products) such as cosmetics and dietary supplements where misleading information is prohibited on one hand but where any health claims need formal authorisation on the other. These but also other areas are reviewed and presented in an updated and - if justified - in an enlarged form.

Dictionary of Drug Development McGraw-Hill Companies

This dictionary provides a convenient personal reference source, intended to complement more encyclopaedic works. First, there is an alphabetic, fully cross-indexed listing of pharmacologically active agents and their properties, containing details of some 4000 individual chemical agents including medical drugs in current use, experimental agents and toxins used as investigation tools. Over 10,000 alternative names are indexed, including chemical names, abbreviated chemical names, official pharmacological names, proprietary names and research code numbers. A key feature is that the properties of the agents are categorised, according to mechanism and use, into 300 classes -for each of which there are descriptive articles for which key literature and review references are provided. Second, there is an alphabetical glossary explaining the meaning of some 3000 biomedical terms from pharmacology, biochemistry, molecular biology, immunology, pathology, physiology, anatomy and microbiology. Emphasis in explanation is given to terms that

can cause confusion, for example those relating to drug receptors and to endogenous mediators.

Audience: This work provides indispensable information for researchers in the fields of pharmacology, medicinal chemistry and pharmaceuticals, and biochemistry, as well as for medical and science writers and editors and drug regulatory officers.

The Dictionary of Drugs: Chemical Data CRC Press

Pharmacovigilance is, in essence, the process of monitoring the everyday use of medicines to identify previously unrecognised adverse drug reactions, thereby assessing their risk/benefit balance in order to determine what action, if any, is necessary to improve their safe use. As a discipline, pharmacovigilance impacts on many specialist areas such as pharmacoepidemiology, medical practice, public health, but is most intimately linked to clinical research, development and drug licensing. The discipline along with its operational and legal facets, for both regulatory authorities and pharmaceutical industry, envelop colossal terminology that has precise legal and scientific significance. Such terminology may vary from country to country, or more confusingly, different countries may use identical or similar abbreviations, terms or phrases to mean different entities. The Dictionary of Pharmacovigilance contains a comprehensive list of abbreviations, terms and phrases (in English) giving definitions of commonly (and rarely) encountered pharmacovigilance terms. Examples include: Absolute Risk Increase (ARI), Bayesian Confidence Propagation Neural Network (BCPNN), Confounding Factor, Case narrative, Causality Assessment, Company Core Safety Information (CCSI), Data mining, 15-day report, Rechallenge, Directive 2001/83/EC, EU Birth Date, Expert report, FDA Form 1639, Historical control, Number Needed to Harm, Toxokinetics, Post-Marketing Surveillance, Qualified Person, Source Data Verification (SDV), Spontaneous Reporting, Vaccine Adverse Event Reporting System (VAERS), Warning Letter, Product Withdrawal.
