Fashion design is largely determined by how the fabrics work, move, feel and look. The most successful fashion designers are those who understand their materials, who match design skill with technical knowledge. This book bridges that gap by providing a mix of practical information and industry vocabulary, visually examining generic fabric types, discussing the characteristics of fabrics and showing how to exploit materials to push the boundaries of design. With stunning colour photographs that show how fashion designers, both past and present, have worked with fabrics, the book's prime objective is to stimulate creative exploration of the relationship of fabrics to fashion.

Plastics investigates the archaeology of the contemporary world through the lens of its most distinguishing and problematic material.

Plastics are ubiquitous and have been so for nearly three generations since they became widely used in the early 1950s. Plastics will persist for millennia, their legacies as toxic heritage being felt deep into the future.

In this book - comprising 32 original, at times disturbing, and critically engaged contributions - scholars from archaeology and other cognate disciplines explore plastics from a number of different angles and perspectives. Together these contributions highlight the dilemma that plastics present: their usefulness on the one hand, and the threats they present to environmental health on the other. The volume also explores the lessons that archaeologists can learn from plastics, about episodes of mass production, consumption and toxicity in the past, and also - importantly - about the future. This important and timely collection will therefore be of interest to all archaeologists irrespective of their period

of study, or their geographical focus, and to students of archaeology and cultural heritage. It will also be relevant for researchers and students in other fields of study that focus on plastics and their environmental and social impacts. Ultimately, this book concerns the contemporary world and the impact of people upon it, through the archaeological lens.

This book provides a simplified and practical approach to designing with plastics that fundamentally relates to the load, temperature, time, and environment subjected to a product. It will provide the basic behaviors in what to consider when designing plastic products to meet performance and cost requirements. Important aspects are presented

such as understanding the advantages of different shapes and how they influence designs.

Information is concise, comprehensive, and practical. Review includes designing with plastics based on material and process behaviors. As designing with any materials (plastic, steel, aluminum, wood, etc.) it is important to know their behaviors in order to maximize product performance-to-cost efficiency. Examples of many different designed products are reviewed. They range from toys to medical devices to cars to boats to underwater devices to containers to

springs to pipes to buildings to aircraft to space craft. The reader's product to be designed can directly or indirectly be related to product design reviews in the book. Important are behaviors associated and interrelated with plastic materials (thermoplastics, thermosets, elastomers, reinforced plastics, etc.) and fabricating processes (extrusion, injection molding, blow molding, forming, foaming, rotational molding, etc.). They are presented so that the technical or non-technical reader can readily understand the interrelationships.
