When you use Hibernate in your projects, you quickly recognize that you need to do more than just add @Entity annotations to your domain model classes. Real-world applications often require advanced mappings, complex queries, custom data types and caching. Hibernate can do all of that. You just have to know which annotations and APIs you need to use. *Hibernate Tips - More than 70 solutions to common Hibernate problems* shows you how to efficiently implement your persistence layer with Hibernate's basic and advanced features. Each Hibernate Tip consists of one or more code samples and an easy to follow step-by-step explanation. You can also download an example project with executable test cases for each Hibernate Tip.

Throughout this book, you will get more than 70 ready-to-use solutions that show you how to:

- Define standard mappings for basic attributes and entity associations.
- Implement your own attribute mappings and support custom data types.
- Use Hibernate's Java 8 support and other proprietary features.
- Read data from the database with JPQL, Criteria API, and native SQL queries.
- Call stored procedures and database functions.

This book is for developers who are already working with Hibernate and who are looking for solutions for their current development tasks. It's not a book for beginners who are looking for extensive descriptions of Hibernate's general concepts. The tips are designed as self-contained recipes which provide a specific solution and can be accessed when needed. Most of them contain links to related tips which you can follow if you want to dive deeper into a topic or need a slightly different solution. There is no need to read the tips in a specific order. Feel free to read the book from

cover to cover or to just pick the tips that help you in your current project.

Lean Thinking was launched in the fall of 1996, just in time for the recession of 1997. It told the story of how American, European, and Japanese firms applied a simple set of principles called 'lean thinking' to survive the recession of 1991 and grow steadily in sales and profits through 1996. Even though the recession of 1997 never happened, companies were starving for information on how to make themselves leaner and more efficient. Now we are dealing with the recession of 2001 and the financial meltdown of 2002. So what happened to the exemplar firms profiled in *Lean Thinking*? In the new fully revised edition of this bestselling book those pioneering lean thinkers are brought up to date. Authors James Womack and Daniel Jones offer new guidelines for lean thinking firms and bring their groundbreaking practices to a brand new generation of companies that are looking to stay one step ahead of the competition.

This volume provides the first comprehensive, research-based examination of metacognition in literacy learning. Bringing together research findings from reading, linguistics, psychology, and education, it is logically organized as follows: Part I provides the theoretical foundation that supports the

teaching of metacognition; Parts II and III provide new methods for metacognitive assessment and instruction in literacy contexts at all grade levels; and Part IV provides new information on integrating metacognition into professional development programs. Key features include: *Chapter Structure. Teacher reflections at the beginning of each chapter illustrate teacher thinking about the chapter topic and metacognitive connections at the end of each chapter link its content with that of the preceding and following chapters. *Contributor Expertise. Few volumes can boast of a more luminous cast of contributing authors (see table of contents). *Comprehensiveness. Twenty chapters organized into four sections plus a summarizing chapter make this the primary reference work in the field of literacy-based metacognition. This volume is appropriate for reading researchers, professional development audiences, and for upper-level undergraduate and graduate level courses in reading and educational psychology.

During the 1990s, a new paradigm for power sector reform was put forward emphasizing the restructuring of utilities, the creation of regulators, the participation of the private sector, and the establishment of competitive power markets. Twenty-five years later, only a handful of developing countries have fully implemented these Washington Consensus policies. Across the developing world, reforms were adopted rather selectively, resulting in a hybrid model, in which elements of market orientation coexist with continued state dominance of the sector. This book aims to revisit and refresh thinking on power sector reform approaches for developing countries. The approach relies heavily on evidence from the past, drawing both on broad global trends and deep case material from 15 developing countries. It is also forward looking, considering the implications of new social and environmental policy goals, as well as the emerging technological disruptions. A nuanced picture emerges. Although

regulation has been widely adopted, practice often falls well short of theory, and cost recovery remains an elusive goal. The private sector has financed a substantial expansion of generation capacity; yet, its contribution to power distribution has been much more limited, with efficiency levels that can sometimes be matched by well-governed public utilities. Restructuring and liberalization have been beneficial in a handful of larger middle-income nations but have proved too complex for most countries to implement. Based on these findings, the report points to three major policy implications. First, reform efforts need to be shaped by the political and economic context of the country. The 1990s reform model was most successful in countries that had reached certain minimum conditions of power sector development and offered a supportive political environment. Second, countries found alternative institutional pathways to achieving good power sector outcomes, making a case for greater pluralism. Among the top performers, some pursued the full set of market-oriented reforms, while others retained a more important role for the state. Third, reform efforts should be driven and tailored to desired policy outcomes and less preoccupied with following a predetermined process, particularly since the twenty-first-century agenda has added decarbonization and universal access to power sector outcomes. The Washington Consensus reforms, while supportive of the twenty-first-century agenda, will not be able to deliver on them alone and will require complementary policy measures

Open publication The volume deals with previously undescribed morphosyntactic variations and changes appearing in

settings involving language contact. Contact-induced changes are defined as dynamic and multiple, involving internal change as well as historical and sociolinguistic factors. A variety of explanations are identified and their relationships are analyzed. Only a multifaceted methodology enables this fine-grained approach to contact-induced change. A range of methodologies are proposed, but the chapters generally have their roots in a typological perspective. The contributors recognize the precautionary principle: for example, they emphasize the difficulty of studying languages that have not been described adequately and for which diachronic data are not extensive or reliable. Three main perspectives on contact-induced language change are presented. The first explores the role of multilingual speakers in contact-induced language change, especially their spontaneous innovations in discourse. The second explores the differences between ordinary contact-induced change and change in endangered languages. The third discusses various aspects of the relationship between contact-induced change and internal change.

This book is divided into four parts. In Part One the author considers the natural factors which have influenced the various national systems of education. They comprise racial, linguistic, geographical and economic factors. In Part Two he considers the contribution of religious traditions to education, more particularly those of the Catholic and Puritan faiths, and in Part Three the secular traditions of humanism, socialism and nationalism. Finally in Part Four a comparison is made of the systems of education in England

and Wales, the USA, France and the Soviet Union.

Abstract: A comprehensive report by the US President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research addresses some of the most important and troubling ethical and legal questions

in modern medicine for consideration by health care professionals, lawyers, and relatives of patients regarding the sensitive topic of voluntary cessation of life-sustaining therapy for the seriously ill. It was concluded that the cases that involve true ethical difficulties are much fewer than commonly believed and that the perception of difficulties primarily occurs because of misunderstandings about the dictates of law and ethics. It also is concluded that, while competent informed patients have the authority to decline or accept health care, others must act on the behalf of incompetent patients. The report urges that health care institutions develop and use internal review methods that permit exploration of all relevant issues. The 7 report chapters are grouped around 2 themes: the various aspects of making treatment decisions; and patient groups raising special concerns (e.g.: permanently-unconscious patients; seriously-ill newborns. Throughout history, those arrested for vagrancy have generally been poor men and women, often young, able-bodied, unemployed, and homeless. Most histories of vagrancy have focused on the European and American experiences. Cast Out: Vagrancy and Homelessness in Global and Historical Perspective is the first book to consider the shared global heritage of vagrancy laws, homelessness, and the historical processes they accompanied. In this ambitious collection, vagrancy and homelessness are used to examine a vast array of phenomena, from the migration of labor to social and governmental responses to poverty through charity, welfare, and

prosecution. The essays in *Cast Out* represent the best scholarship on these subjects and include discussions of the lives of the underclass, strategies for surviving and escaping poverty, the criminalization of poverty by the state, the rise of welfare and development programs, the relationship between imperial powers and colonized peoples, and the struggle to achieve independence after colonial rule. By juxtaposing these histories, the authors explore vagrancy as a common response to poverty, labor dislocation, and changing social norms, as well as how

this strategy changed over time and adapted to regional peculiarities. Part of a growing literature on world history, *Cast Out* offers fresh perspectives and new research in fields that have yet to fully investigate vagrancy and homelessness. This book by leading scholars in the field is for policy makers, as well as for courses on poverty, homelessness, and world history.
