A perfect and irresistible idea: A

cookbook filled with delicious, healthful recipes created for everyone on a tight budget. While studying food policy as a master's candidate at NYU, Leanne Brown asked a simple yet critical question: How well can a person eat on the \$4 a day given by SNAP, the U.S. government's Supplemental Nutrition Assistance Program informally known as food stamps? The answer is surprisingly well: Broiled Tilapia with Lime, Spicy Pulled Pork, Green Chile and Cheddar Quesadillas, Vegetable Jambalaya, Beet and Chickpea Salad—even desserts like Coconut Chocolate Cookies and Peach Coffee Cake. In addition to creating nutritious recipes that maximize every

ingredient and use economical cooking methods, Ms. Brown gives tips on shopping; on creating pantry basics; on mastering certain staples—pizza dough, flour tortillas—and saucy extras that make everything taste better, like spice oil and tzatziki; and how to make fundamentally smart, healthful food choices. The idea for Good and Cheap is already proving itself. The author launched a Kickstarter campaign to self-publish and fund the buy one/give one model. Hundreds of thousands of viewers watched her video and donated \$145,000, and national media are paying attention. Even high-profile chefs and food writers have taken note—like Mark Bittman, who

retweeted the link to the campaign; Francis Lam, who called it “Terrific!”; and Michael Pollan, who cited it as a “cool kickstarter.” In the same way that TOMS turned inexpensive, stylish shoes into a larger do-good movement, Good and Cheap is poised to become a cookbook that every food lover with a conscience will embrace.

Just how productive can one small vegetable garden be? More productive than one might think! Colin McCrate and Brad Halm, former CSA growers and current owners of the Seattle Urban Farm Company, help readers boost their garden productivity by

teaching them how to plan carefully, maximize production in every bed, get the most out of every plant, scale up systems to maximize efficiency, and expand the harvest season with succession planting, intercropping, and season extension. Along with chapters devoted to the Five Tenets of a Productive Gardener (Plan Well to Get the Most from Your Garden; Maximize Production in Each Bed; Get the Most out of Every Plant; Scale up Tools and Systems for Efficiency; and Expand and Extend the Harvest), the book contains interactive tools that home gardeners can use to assist them in determining how, when, and what to plant; evaluating crop

health; and planning and storing the harvest. For today's vegetable gardeners who want to grow as much of their own food as possible, this guide offers expert advice and strategies for cultivating a garden that supplies what they need. Grow More Food Everyman Chess Document from the year 2014 in the subject Computer Science - Programming, , language: English, abstract: This book will help us in becoming masters in basic and advanced HTML programming for beginners. It starts with the basic structure and a simple

introduction:

Webpages are written in HTML - a simple scripting language. HTML is short for HyperText Markup Language. Hypertext is simply a piece of text that works as a link. Markup Language is a way of writing layout information within documents. Basically an HTML document is a plain text file that contains text and nothing else. When a browser opens an HTML file, the browser will look for HTML codes in the text and use them to change the layout, insert images, or create links to other pages. Since HTML documents are just text files they can be written in even the simplest text editor.

British Fictions of the Sixties focuses on the major socio-political changes that marked the sixties in relationship to the development of literature over the decade. This book is the first critical study to acknowledge that the 1960s can only be understood if, next to its contemporary socio-political history, its fictions and mythologies are acknowledged as a vital constituent in the understanding of the decade. Groes uncovers a major epistemological shift, and presents a powerful meta-narrative about post-war literature in the UK, and beyond. British Fictions of the Sixties offers a re-examination of canonical writers

such as Iris Murdoch, Angela Carter, Muriel Spark and John Fowles. It also pays critical attention to avant-garde writers including Ann Quinn, Bridget Brophy, Eva Figes, Christine Brooke-Rose, and J. G. Ballard, presenting a comprehensive insight into the continuing power the decade exerts on the contemporary imagination.

subject English Language and Literature Studies - Literature, grade: 2+, Free University of Berlin (Institut für Englisch Philologie), course: Youth Cultures - Presenting Youth in Theory and Fictional Writing, 4 entries in the bibliography, language: English, abstract: The purpose of this paper is to analyse the question to what extent a piece of art, in this case a novel, can serve as a basis for cultural studies. For this reason the representation of youth and youth culture in the novel *Absolute Beginners* by Colin MacInnes will be analysed. In the second chapter this paper introduces the novel with its main characters and the main themes. The third chapter then focuses

on the theories of youth and youth culture from Ogersby. To combine the results drawn from the first two chapters, the fourth chapter deals with the question whether *Absolute Beginners* main character is represented as a typical teenager of the fifties or whether he is just a construction by the author. All the results of the paper are combined in the conclusion to prove whether the novel serves as a medium for representing youth cultures of the fifties in England or not. This leads to the answer of the question how a piece of art can be taken as a basis for cultural studies.

"O'Reilly Media, Inc." In just thirteen brief, accessible chapters, this engaging little book takes "absolute beginners" from the most basic questions about the language (e.g., what does a classical Chinese character look like?) to

reading and understanding selections from classical Chinese philosophical texts and Tang dynasty poetry. "An outstanding introduction to reading classical Chinese. Van Norden does a wonderful job of clearly explaining the basics of classical Chinese, and he carefully takes the reader through beautifully chosen examples from the textual tradition. An invaluable work."

But in spirit, the title is apt, as the book does cover a much broader range of topics than a typical introductory book on mathematical statistics. This book is for people who want to learn probability and statistics quickly. It is suitable for graduate or advanced undergraduate students in computer science, mathematics, statistics, and related disciplines. The book includes modern topics like non-parametric

curve estimation, bootstrapping, and classification, topics that are usually relegated to follow-up courses. The reader is presumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. Statistics, data mining, and machine learning are all concerned with collecting and analysing data.
