The first generation that has grown up in

a digital world is now in our university classrooms. They, their teachers and their parents have been fundamentally affected by the digitization of text, images, sound, objects and signals. They interact socially, play games, shop, read, write, work, listen to music, collaborate, produce and co-produce, search and browse very differently than in the pre-digital age. Adopting emerging technologies easily, spending a large proportion of time online and multitasking are signs of the increasingly digital nature of our everyday lives. Yet consumer research is just beginning to emerge on how this affects basic human and consumer behaviours such as attention, learning, communications, relationships, entertainment and knowledge. The Routledge Companion to

Digital Consumption offers an introduction to the perspectives needed to rethink consumer behaviour in a digital age that we are coming to take for granted and which therefore often escapes careful research and reflective critical appraisal.

As colleges and universities in North America increasingly identify "internationalization" as a key component of the institution's mission and strategic plans, faculty and administrators are charged with finding innovative and cost-effective approaches to meet those goals. This volume provides an overview and concrete examples of globally-networked learning environments across the humanities from the perspective of all of their stakeholders: teachers, instructional

designers, administrators and students. By addressing logistical, technical, pedagogical and intercultural aspects of globally-networked teaching, this volume offers a unique perspective on this form of curricular innovation through internationalization. It speaks directly to the ways in which new technologies and pedagogies can promote humanities-based learning for the future and with it the broader essential skills of intercultural sensitivity, communication and collaboration, and critical thinking. *Push* Bloomsbury Publishing

A powerful new approach to natural, intuitive whole-body healing. The Body Code is a truly revolutionary method of holistic healing. Dr. Bradley Nelson, a globally renowned expert in bioenergetic medicine, has spent decades teaching his powerful self-healing method and

training practitioners around the globe, but this is the first time his system of healing will be available to the general public in the form of *The Body Code*. The *Body Code* is based on the simple premise that the body is self-healing and knows what it needs in order to thrive and flourish. The *Body Code* method allows readers to tap into this inner knowing, and find imbalances in 6 key areas—Energies, Circuits and Systems, Toxicity, Nutrition and Lifestyle, Misalignments, and Pathogens—that are the root causes of our physical, mental and emotional issues. By identifying and releasing these imbalances, readers become empowered to activate their body's innate healing power. Featuring a foreword from George Noory, host of *Coast to Coast AM*, and filled with

powerful first-hand accounts of healing, hundreds of color illustrations, and concrete, actionable steps, *The Body Code* is a road map to healing based in deep study of the human body, time-proven ancient practices, and the unlimited power of the subconscious mind.

How does technology impact research practices in the humanities? How does digitisation shape scholarly identity? How do we negotiate trust in the digital realm? What is scholarship, what forms can it take, and how does it acquire authority? This diverse set of essays demonstrate the importance of asking such questions, bringing together established and emerging scholars from a variety of disciplines, at a time when

data is increasingly being incorporated as an input and output in humanities sources and publications. Major themes addressed include the changing nature of scholarly publishing in a digital age, the different kinds of 'gate-keepers' for scholarship, and the difficulties of effectively assessing the impact of digital resources. The essays bring theoretical and practical perspectives into conversation, offering readers not only comprehensive examinations of past and present discourse on digital scholarship, but tightly-focused case studies. This timely volume illuminates the different forces underlying the shifting practices in humanities research today, with especial focus on how humanists take ownership of, and are empowered by, technology in

unexpected ways. *Digital Technology and the Practices of Humanities Research* is essential reading for scholars, students, and general readers interested in the changing culture of research practices in the humanities, and in the future of the digital humanities on the whole. Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies or taking an introductory MA course, as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative

'practice to theory' approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Exploring Digital Communication aims to discuss real-world issues pertaining to digital communication, and to explore how linguistic research addresses these challenges. The text is divided into three sections (Problems and practices; Interventions; and Theory), each of which is further divided into two subsections which reflect linguistic issues relating to digital communication. The author seeks to demystify any perceived divide between online and

offline communication, arguing that issues raised in relation to digital communication throw light on language use and practices in general, and thus linguistic interventions in this area have implications not only for users of digital communication but for linguists' general understanding of language and society. Including relevant research examples, tasks and a glossary, this textbook is an invaluable resource for postgraduate and upper undergraduate students taking New Media or Communication Studies modules within Applied Linguistics and English Language courses.

Modern institutional economics was created to study the institutions of pre-digital economies and is based on reductionist approaches. But digital capitalism is producing institutions of unprecedented complexity. This book argues therefore that not only the economic institutions themselves but also the theoretical foundations for studying those institutions must now be adapted to digital capitalism. The book

focuses on the institutional complexity of digital capitalism, developing an interdisciplinary framework which brings together cutting-edge theoretical approaches from philosophy (first of all, object-oriented ontology), sociology (especially actor-network theory), evolutionary biology, and cognitive science. In particular, the book outlines a new approach to the study of institutional evolution, based on extended evolutionary synthesis - a new paradigm in evolutionary biology, which is now replacing neo-Darwinism. The book develops an enactivist notion of extended cognition and cognitive institutions, rejecting the individualistic and mechanistic understanding of economic rationality in digital environments. The author experiments

with new philosophical approaches to investigate institutional complexity, for example, the ideas of the flat ontology and the assemblage theory. The flat ontology approach is applied to the study of human-robot institutions, as well as to thinking about post-anthropocentric institutional design. Assemblage thinking allows for a new (much less idealistic) look at blockchain and smart cities. Blockchain as digital institutional technology is considered in the book not from the viewpoint of minimizing transaction costs (as is customary in the modern institutional economics), but by using the theory of transaction value which focuses on improving the quality of digital transactions. The book includes a wide range of examples ranging from

metaverses, cryptocurrencies and big data to robot rules, smart contracts and machine learning algorithms. Written for researchers in institutional economics and other social sciences, this interdisciplinary book is essential reading for anyone interested in the interplay of institutional and digital change.

Virtual worlds are places where humans interact, and as such they can be environments for research and learning. However, they are complex and mutable in ways that more controlled and traditional environments are not. Although computer-mediated, virtual worlds are multifaceted social systems like the offline world, and choosing to study virtual world phenomena demands

as much consideration for the participants, the environment and the researcher as offline. By exploring virtual worlds as places of research and learning, the international practitioners in this book demonstrate the power of these worlds to replicate and extend our arenas of research and learning. They focus on process and outcomes and consider questions that arise from engaging in teaching and research in these spaces, including new approaches to research ethics, internationalization, localization, and collaboration in virtual worlds. This book was originally published as a special issue of *Learning, Media & Technology*.

"An exquisitely timed book ... Code Red is a worthwhile exploration of the shared goals (and shared enemies) that unite moderates and progressives. But more than that, it is a sharp reminder that the common ground on which Dionne built his career has been badly eroded, with

little prospect that it will soon be restored." —The New York Times Book Review New York Times bestselling author and Washington Post columnist E. J. Dionne, Jr. sounds the alarm in Code Red, calling for an alliance between progressives and moderates to seize the moment and restore hope to America's future for the 2020 presidential election. Will progressives and moderates feud while America burns? Or will these natural allies take advantage of the greatest opportunity since the New Deal Era to strengthen American democracy, foster social justice, and turn back the threats of the Trump Era? The United States stands at a crossroads. Broad and principled opposition to Donald Trump's presidency has drawn millions of previously disengaged citizens to the

public square and to the ballot boxes. This inspired and growing activism for social and political change hasn't been seen since the days of Franklin Roosevelt's New Deal policies and the Progressive and Civil Rights movements. But if progressives and moderates are unable—and unwilling—to overcome their differences, they could not only enable Trump to prevail again but also squander an occasion for launching a new era of reform. In *Code Red*, award-winning journalist E. J. Dionne, Jr., calls for a shared commitment to decency and a politics focused on freedom, fairness, and the future, encouraging progressives and moderates to explore common ground and expand the unity that brought about Democrat victories in the 2018 elections. He offers a unifying

model for furthering progress with a *Politics of Remedy, Dignity, and More*: one that solves problems, resolve disputes, and moves forward; that sits at the heart of the demands for justice by both long-marginalized and recently-displaced groups; and that posits a positive future for Americans with more covered by health insurance, more with decent wages, more with good schools, more security from gun violence, more action to roll back climate change. Breaking through the partisan noise and cutting against conventional wisdom to provide a realistic look at political possibilities, Dionne offers a strategy for progressives and moderates to think more clearly and accept the responsibilities that history now imposes on them. Because at this point in our

national story, change can't wait.
