Are current concepts of leadership appropriate for today's organizations? What will tomorrow's leadership need to be like? Is there a best approach to leadership? With a huge range of definitions and theories of leadership available, the field has become confusing for both students and practitioners alike. This text provides a framework for making sense of the field. In Part One, Gayle C Avery integrates a fragmented field into four broad paradigms or forms of leadership, helping to simplify and clarify the ill-defined field of leadership. The second part provides 10 case studies from leading organizations across Europe, Australia and the United States to illustrate how diverse leadership can be in successful organizations. At the end of each case, specific questions guide the reader in interpreting and analyzing the cases, connecting them to the leadership frameworks and theories in Part One. Written in simple language, Understanding Leadership can be used by readers with no prior knowledge of leadership. With its overview of major theories in the field and presentation of a simple and effective framework for analyzing these theories, the book will be essential reading for advanced undergraduate and MBA students. Avery has devised a set of powerpoint slides to accompany the book and support lecturers. They are available to view under Sample Materials and Chapters or under Links and Resources

*Understanding Leadership* Arihant Publications India limited  
Many deep concerns in the life sciences and medicine have to do with the enactment, ordering and displacement of a broad range of values. This volume articulates a pragmatist stance for the

study of the making of values in society, exploring various sites within life sciences and medicine and asking how values are at play. This means taking seriously the work scientists, regulators, analysts, professionals and publics regularly do, in order to define what counts as proper conduct in science and health care, what is economically valuable, and what is known and worth knowing. A number of analytical and methodological means to investigate these concerns are presented. The editors introduce a way to indicate an empirically oriented research program into the enacting, ordering and displacing of values. They argue that a research programme of this kind, makes it possible to move orthogonally to the question of what values are, and thus ask how they are constituted. This rectifies some central problems that arise with approaches that depend on stabilized understandings of value. At the heart of it, such a research programme encourages the examination of how and with what means certain things come to count as valuable and desirable, how registers of value are ordered as well as displaced. It further encourages a sense that these matters could be, and sometimes simultaneously are, otherwise.
