This user guide has been

developed to consolidate existing IMO maritime security-related material into a companion guide to SOLAS chapter XI-2 and the ISPS Code so as to assist States in promoting maritime security through development of the requisite legal framework, associated administrative practices, procedures and the necessary material, technical and human resources. The intention is to assist SOLAS Contracting Governments in the implementation, verification, compliance with, and enforcement of,

the provisions of SOLAS chapter XI-2 and the ISPS Code.

Peter Lang

The importance of international maritime labour law - both as a component of international maritime law, and in socio-political and economic terms - has been recognised by the IMO International Maritime Law Institute for a number of years. Indeed, the Institute has annually organised a course on maritime labour law with the participation of inter alia the

International Maritime Organization, the International Labour Organization, the International Transport Workers' Federation, and the German Shipowners' Association. It was therefore a great pleasure when the authors invited me to introduce their forthcoming monograph on Maritime Work Law Fundamentals: Responsible Shipowners Reliable Seafarers. As the title suggests, a fundamental challenge of this branch of international maritime law

is to achieve a balance between the interests of the two main stakeholders.

Institutionally, the effort to achieve this balance dates back a number of decades with its genesis mainly found in the work of the International Labour Organization. It has to be said that whilst this effort achieved great progress, it has led to a haphazard, plethora of legal instruments.

and concise manner.
English in the European Context Inter-Governmental Maritime The Safety of Navigation, implementing SOLAS - Chapter V has been prepared to help ship-owners, masters, crews and industry to understand and comply with the SOLAS Regulations and offers practical guidance on how they should be implemented. It is important that all parties fully understand the requirements of Chapter V and the associated

documents and recognise their own specific responsibilities under each Regulation. Of all the international conventions dealing with maritime safety, the most important is the International Convention for the Safety of Life at Sea (SOLAS), which covers a wide range of measures designed to improve the safety of shipping. Substantial revisions to the fifth version of SOLAS came into force on 1 July 2002, with the new Regulations implemented under UK

legislation by the Merchant Shipping (Safety of Navigation) Regulations 2002

Language education tends to require more face-to-face interaction and longer hours of both teaching and learning. The challenges of ensuring the future and development of the discipline, especially after a time of crisis, is equally unprecedented. A comprehensive overview

of the global picture of best practices as well as research in recent times are needed in the field of language education, particularly in higher education settings. The changing nature of language education in terms of its policy, curriculum design, methodology, and innovation is an essential discussion to advance the field. It is critical to explore how a more collaborative, global, and interdisciplinary mindset, as well as technologically driven approaches have

emerged through recent years and how it will continue to shape the future development in the field. Trends and Developments for the Future of Language Education in Higher Education captures the current trends and ongoing development within language education through a global picture of the best practices as well as the latest research on language education in higher education settings. The chapters cover changes in policy, curriculum design,

methodology, and innovation in the modern language education landscape. While focusing on the current situation of language education and the changes that it has been undergoing, this book also provides information on future development and the overall outlook of language education. This book is ideal for teachers, instructional designers, curricula developers, inservice and preservice teachers, administrators, teacher educators, practitioners, researchers,

academicians, and students looking for an overview of the current position of language education in higher education.

Annex to MSC Circular 794, 10 June 1997 Münip Baş

More than ever, professional English is now cruising towards an enormous challenge in the European university context due to the extremely significant moment we are living in the European Higher Education Area (EHEA). The European

convergence process is demanding immediate reflections, serious analyses, and profound reforms in specialized language teaching that lead to reach Bologna standards by 2010. This book aims to present an overview of professional English in the current academic landscape in Europe. It intends to shed light on a range of issues, both theoretical and practical, related to ESP, focusing on discourse analysis, corpus analysis, information and communication

technologies, methodological approaches, curriculum design, and empirical research into language learning in broad terms. Because teachers need to be researchers and inquirers, this overview thus makes a contribution to the professional English field with the purpose of highlighting several important questions in the entire ESP academic mainstream. Scholars from different European universities explore specialized languages and document ESP teaching

methodologies at university levels from a multidimensional perspective.

Navigation and Vessel Inspection Circular Peter Lang

Based on a wide range of consultations with maritime organisations, the guide was produced by organisational psychologists gs partnership ltd, for consortium partners UK Maritime and Coastguard Agency, BP Shipping, Teekay Marine Services, and the Standard P&I Club. Aimed at everyone

in the shipping industry, the Guide explains the fundamental aspects of human behaviour, which together constitute what the commercial maritime sector calls 'the human element'. It makes clear that the human element is neither peripheral nor optional in the pursuit of a profitable and safe shipping industry. The Guide clearly shows that managing the human element must take place simultaneously at all levels of the industry. Analysis of continuing shipping disasters has

increasingly implicated the human element. The loss of life, the impact on company profits and credibility, and the vast environmental damage that can result from the loss of even a single vessel remain clear. The Guide offers insight, explanation and advice to help manage the human element more effectively, more safely and more profitably.

Taylor & Francis

Covering a variety of themes and subject areas related to language and

communication in international and multilinguistic contexts, this book offers an insight into the latest research in applied linguistics and language acquisition. Aimed at both scholars and language practitioners, it presents empirical findings from researchers from more than 10 countries. Rather than limiting its focus to one language and context as a source of research, the collection reports and applies findings from various languages and communities.

The EHEA Challenge

Taylor & Francis

This volume focuses on specialist translation - one of the areas of translation in greatest demand in our age of globalization. The 16 chapters deal not only with the classical domains of science and technology, law, socio-politics and medicine but also with lesser researched areas such as archeology, geography, nutrigenomics and others. As a whole, the book achieves a blend of theory and practice. It addresses a variety of issues such as

translation strategy based on text type and purpose, intercultural transfer and quality assessment, as well as textual and terminological issues in bilingual and multilingual settings, including international organizations and the European Union. Today translation competence presupposes multidisciplinary skills. Whereas some chapters analyze the linguistic features of special-purpose texts and their function in specialized communication, others

show how specialized translation has changed as a result of globalization and how advances in technology have altered terminology research and translation processing.

Safety of Navigation

AHFE International (USA) The TransNav 2013 Symposium held at the Gdynia Maritime University, Poland in June 2013 has brought together a wide range of participants from all over the world. The program has offered a variety of contributions, allowing to look at many aspects of

the navigational safety from various different points of view. Topics presented and discussed at th

PHRASESIMO Standart Denizcilik Haberleşme Kalıpları Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include

accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the

transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross

section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research- it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall

system.
Insights Into Specialized Translation Springer Science & Business Media
 This bestselling book provides an incomparable reference source for all vessels using maritime radio communication systems, which are now a legislative requirement. It includes exhaustive coverage of all UK and international regulations relating to modern maritime communications, such as the crucial GMDSS, all contained within one singular volume. This

sixth edition has been fully updated to take into account major developments over the last five years, in particular the revised regulations introduced by the International Telecommunication Union in 2012. The authors deliver an authoritative guide to the complicated and changing world of radio communications, including: The very latest technological advances in terrestrial and satellite communications Changes to the international VHF channel allocation and

channel spacing The major overhaul of the organisational structure of the UK Coastguard service Substantial enhancements to the eLoran services The changing complexities of voyage planning Large diagrams, an extensive index and fully-updated appendices This is a definitive guide for today's maritime communications industry, including ship owners, ship managers, coast guards, seafarers, students of maritime communications, as well

as the recreational sector. *IMO standard marine communication phrases* Taylor & Francis IMO sales no.: T123E. *Maritime Work Law Fundamentals: Responsible Shipowners, Reliable Seafarers* Giuffrè Editore This new edition explains the GMDSS rules, regulations and procedures.
