Understanding policy analysis in France requires first a thorough exploration of the distinction usually made in French academic and practitioner debates between policy studies and policy analysis--essentially the difference between studies of policy and studies designed for the use of policy. This book begins there, then delves into questions of how and by whom knowledge of policies is produced within and outside the French state, showing that while the tension between the two types of study is real, the continued exchange of ideas between them has led to an enrichment of both spheres. The book thus lays the foundation for a more systematic understanding of policy analysis in France.

Administrators, more technically savvy than their managers, have started to secure the networks in a way they see as appropriate. When management catches up to the notion that security is important, system administrators have already altered the goals and business practices. Although they may be grateful to these people for keeping the network secure, their efforts do not account for all assets and business requirements. Finally, someone decides it is time to write a security policy. Management is told of the necessity of the policy document, and they support its development. A manager or administrator is assigned to the task and told to come up with something, and fast! Once security policies are written, they must be treated as living documents. As technology and business requirements change, the policy must be updated to reflect the new environment—at least

one review per year. Additionally, policies must include provisions for security awareness and enforcement while not impeding corporate goals. This book serves as a guide to writing and maintaining these all-important security policies.
