This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help

students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text.

With this in mind, this engaging text provides an overview of major classic and current theories of personality, brings theories to life through the interpretation of illustrative biographies, and integrates a clear explanation of theory with the latest research. A Guide for Mental Health Professionals
McGraw-Hill Education

'The third in a series explicating the criminal mind, this volume summarizes observations, interpretations, and conclusions derived from a study of 121 criminal men who used drugs and/or alcohol to excess. Originally set in writing by Yochelson before his death in 1976, the

materials were edited and updated by Samenow for publication. Systematic, probing and repeated interviews were used as the vehicle for gathering information on common mental themes among men apprehended and sentenced for criminal acts.... Yochelson and Samenow attribute crime to a series of early irresponsible choices that predate drug use among drug-using criminals. Personality and personal choice variables are conceptualized as critical in initialing and maintaining use. In what is called an indiscriminate search for excitement, drug-using criminals are characterized as expanding their criminal repertoire while excusing their actions by rationalizations sometimes invented by sociologists, psychologists, and psychiatrists. Although these ideas are of considerable interest, the real value of the text lies in its intriguing presentation of drug-user thinking. Specifically, three chapters are well worth reading. The description of mental activities associated with such constructs as 'the high,' 'the nod,' and 'the rush' are probably on target for many drug users, whether criminal or not. The chapter explaining drugs as facilitators

offers several notions worthy of systematic inquiry, as does the one devoted to principles for encouragement of behavior change. Of perhaps greatest benefit to most readers are caveats regarding management of drug users in what may be seen as a cognitive-behavioral framework. Yochelson and Samenow contend that drug-using criminal men represent the architects of their criminal life-styles and that it is they themselves who can correct irresponsible thoughts and behaviors through application of logic over emotion.'
