A Companion to Science, Technology, and Medicine in Ancient Greece and Rome brings a fresh perspective to the study of these disciplines in the ancient world, with 60 chapters examining these topics from a variety of critical and technical perspectives. Brings a fresh perspective to the study of science, technology, and medicine in the ancient world, with 60 chapters examining these topics from a variety of critical and technical perspectives Begins coverage in 600 BCE and includes sections on the later Roman Empire and beyond, featuring discussion of the transmission and reception of these ideas into the Renaissance Investigates key disciplines, concepts, and movements in ancient science, technology, and medicine within the historical, cultural, and philosophical contexts of Greek and Roman society Organizes its content in two halves: the first focuses on mathematical and natural sciences; the second focuses on cultural applications and interdisciplinary themes 2 Volumes

Some Thoughts about the Evolution of Human Behavior: A Literature Survey Cambridge University Press

In this new edition of Greek and Roman Technology, the authors translate and annotate key passages from ancient texts to provide a history and analysis of the origins and development of technology in the classical world. Sherwood and Nikolic, with Humphrey and Oleson, provide a comprehensive and accessible collection of rich and varied sources to illustrate and elucidate the beginnings of technology. Among the topics covered are energy, basic mechanical devices, hydraulic engineering, household industry, medicine and health, transport and trade, and military technology. This fully revised Sourcebook collects more than 1,300 passages from over 200 ancient sources and a diverse range of literary genres, such as the encyclopaedic Natural History of Pliny the Elder, the poetry of Homer and Hesiod, the philosophies of Plato, Aristotle, and Lucretius, the agricultural treatises of Varro, Columella, and Cato, the military texts of Philo of Byzantium and Aeneas Tacticus, as well as the medical texts of Galen, Celsus, and the Hippocratic Corpus.

Almost 100 line drawings, indexes of authors and subjects, introductions outlining the general significance of the evidence, notes to explain the specific details, and current bibliographies are included. This new and revised edition of Greek and Roman Technology will remain an important and vital resource for students of technology in the ancient world, as well as those studying the impact of technological change on classical society.
Journal of Archaeological Science JHU Press

In this volume the authors translate and annotate key passages from ancient authors to provide a history and an analysis of the origins and development of technology. Among the topics covered are: * energy * basic mechanical devices * agriculture * food processing and diet * mining and metallurgy * construction and hydraulic engineering * household industry * transport and trade * military technology. The sourcebook presents 150 ancient authors and a diverse range of literary genres, such as, the encyclopedic Natural Histories of Pliny the Elder, the poetry of Homer and Hesiod, the philosophy of Plato, Aristotle and Lucretius and the agricultural treatise of Varro. Humphrey, Oleson and Sherwood provide a comprehensive and accessible collection of rich and varied sources to illustrate and elucidate the beginnings of technology. Glossaries of technological terminology, indices of authors and subjects, introductions outlining the general significance of the evidence, notes to explain the specific details, and a recent bibliography make this volume a valuable research and teaching tool.

The Roman and Byzantine Graves and Human Remains
Cambridge University Press

Food often defines societies and even civilizations. Through particular commensality restrictions, groups form distinct identities. This identity is enacted daily, turning the biological need to eat into a culturally significant activity. In this book,

Jordan D. Rosenblum explores how food regulations and practices helped to construct the identity of early rabbinic Judaism.

Bringing together the scholarship of rabbinics with that of food studies, this volume first examines the historical reality of food production and consumption in Roman-era Palestine. It then explores how early rabbinic food regulations created a distinct Jewish, male, and rabbinic identity.

Food and Identity in Early Rabbinic Judaism Edipuglia srl

On his death, Arthur Boucot (1924–2017) left an unfinished manuscript in which he surveyed the skeletal, behavioral, and cultural changes that have characterized Homo from its first recognition in the Late Pliocene to the present. The results, edited after his death, provide a heavily referenced sourcebook for future workers in diverse fields.

The World of Ancient Greece: A Daily Life Encyclopedia [2 volumes] ISD LLC

A general study of food in antiquity, broadly based and comprehensive.

Dictionary of Daily Life in Biblical and Post-Biblical Antiquity John Wiley & Sons

This study describes and interprets the graves and human remains of Roman and Byzantine date recovered by excavation between 1954 and 1976 in several locales around the Isthmian Sanctuary and the succeeding fortifications. This material provides important evidence for both death and life in the Greek countryside during the Late Roman to Early Byzantine periods. Examination of burial within the local settlement, comparative study of mortuary behavior, and analysis of skeletal morphology, ancient demography, oral health and paleopathology all contribute to a picture of the rural Corinthians over this transitional era as interactive, resilient and modestly innovative.

Catalog. Supplement - Food and Nutrition Information and Educational Materials Center John Wiley & Sons

This book opens the world of the ancient Greeks to all readers through easily accessible entries on topics essential to understanding Greek high culture and daily life. The ancient Greeks provided the foundation for Western civilization. They made significant advances in science, mathematics, philosophy, literature, and government. While many readers might have heard of Plato and Aristotle, however, or be familiar with the classic works of Greek tragedy, most people know significantly less about daily life in the ancient Greek world. This encyclopedia opens the world of the ancient Greeks, spanning Greek history from the Bronze Age through Roman times, with an emphasis on the Classical and Hellenistic Eras. The encyclopedia provides roughly 270 easily accessible entries on topics essential to understanding everything from Greek high culture to daily life. These entries are grouped in topical sections on the arts, science and technology, politics and government, domestic life, and other subjects. Sidebars on particularly noteworthy people, places, and concepts provide related information, while primary documents allow readers to delve into the mindset and feelings of the ancient Greeks themselves. Extensive bibliographic references give curious readers direction for further research. • Includes reference entries with objective, essential information about topics related to daily life in ancient Greece • Offers sidebars with related, nuanced information that will interest readers in Greek history • Cites works for further reading in entries • Gives readers first-hand accounts of life in ancient Greece in primary source documents

Annual Review of Nutrition Routledge

Expert food historians provide detailed histories of the creation and development of particular delicacies in six regions of medieval Europe-Britain, France, Italy, Sicily, Spain, and the Low Countries.

Greek and Roman Technology Cambridge University Press

Ancient Economies, Modern Methodologies is a collection of essays which focuses on the art of questioning; it is about ideas and analytical experiment. Ancient economic history has developed enormously since the publication of M.I. Finley's *The Ancient Economy* in 1973. Much new material has been brought to bear on the debate on the character of economic life in the Greek and Roman world. But, at the same time, discussions have been going round in circles. This is because not enough attention has been given to the questions ancient historians ask and the concepts with which they approach the economy. In this collection, an attempt is made to renew the terms of the debate by presenting a wide variety of new analytical approaches to ancient economic history ranging from literary theory, cross-cultural comparison, statistical analysis of archaeological data to neo-institutional economics and model-building.

Bibliographic Index University of Michigan Press

Exposes centuries-old disability myths that still survive today

Greek and Roman Technology: A Sourcebook Manchester University Press

The authors describe various sources of sustenance (meat, cooking oils, fruits and vegetables, beverages, etc.) in terms of who consumed it, how it was prepared, and how it spread from its region of origin. They also study the impact of diet on disease among early peoples.

Science and Archaeology Routledge

This collection of papers, arising from the conference series *Late Antique Archaeology*, examines the social and political structures of the late antique period and the ways in which they are manifested in the archaeological and textual record.

Cumulative Index to the Catalog of the Food and Nutrition Information and Education Material Center 1973-1975 Harvard University Press

A Companion to Food in the Ancient World presents a comprehensive overview of the cultural aspects relating to the production, preparation, and consumption of food and drink in antiquity. • Provides an up-to-date overview of the study of food in the ancient world • Addresses all aspects of food production, distribution, preparation, and consumption during antiquity • Features original scholarship from some of the most influential North American and European specialists in Classical history, ancient history, and archaeology • Covers a wide geographical range from Britain to ancient Asia, including Egypt and Mesopotamia, Asia Minor, regions surrounding the Black Sea, and China • Considers the relationships of food in relation to ancient diet, nutrition, philosophy, gender, class, religion, and more
Social and Political Life in Late Antiquity - Volume 3.1 American School of Classical Studies at Athens

The domestication of plants and animals was one of the greatest steps forward taken by mankind. Although it was first achieved long ago, we still need to know what led to it and how, and even when, it took place. Only when we have this understanding will we be able to appreciate fully the important social and economic consequences of this step. Even more important, an understanding of this achievement is basic to any insight into modern man's relationship to his habitat. In the last decade or two a change in methods of investigating these events has taken place, due to the mutual realization by archaeologists and natural scientists that each held part of the key and neither alone had the whole. Inevitably, perhaps, the floodgate that was opened has resulted in a spate of new knowledge, which is scattered in the form of specialist reports in diverse journals. This volume results from presentations at the Institute of Archaeology, London University, discussing the domestication and exploitation of plants and animals. Workers in the archaeological,

anthropological, and biological fields attempted to bridge the gap between their respective disciplines through personal contact and discussion. Modern techniques and the result of their application to the classical problems of domestication, selection, and spread of cereals and of cattle were discussed, but so were comparable problems in plants and animals not previously considered in this context. Although there were differing opinions on taxonomic

classification, the editors have standardized and simplified the usage throughout this book. In particular, they have omitted references to authorities and adopted the binomial classification for both botanical and zoological names. They followed this procedure in all cases except where sub-specific differences are discussed and also standardized orthography of sites.
